主要统计指标解释

农林牧渔业增加值 是指农、林、牧、渔及农林牧渔服务业在一定时期内生产货物或提供服务活动而增加的价值。它反映了农业生产经营活动的最终成果和对社会的贡献。

农业增加值的计算方法有两种：(1)生产法，是从生产角度进行计算的一种方法。即用农业总产出减去农业中间消耗求得。由于农户没有健全的核算记录，故农业增加值一般是采用生产法计算。(2)分配法，是从分配角度进行计算的一种方法。是通过农业生产单位在生产经营和劳务活动过程中形成的不含中间消耗的各种收入来计算。具体包括农业劳动者收入、福利基金、利税、固定资产折旧及大修理和其他。

农林牧渔业总产值 是以货币表现的农林牧渔业的全部产品总量和对农林牧渔业生产活动进行的各种支持性服务活动的价值。它反映一定时期内农林牧渔业生产总规模和总成果，是观察农林牧渔业生产水平和发展速度，研究农林牧渔业内部比例关系、农林牧渔业与工业、农林牧渔业与国家建设、人民生活比例关系的重要指标，同时也是计算农林牧渔业劳动生产率和农林牧渔业增加值的基础资料。

农林牧渔业总产值的计算，一般采用“产品法”，即凡有产品产量的，都按单位产品价格乘产量的办法求得每种产品产量的产值，然后相加求得各业的产值，最后各业相加求出农林牧渔业总产值。

乡镇户数 指长期（一年以上）居住在乡镇（不包括城关镇）行政管理区域内的住户，还包括居住在城关镇所辖行政村范围内的农村住户。

乡镇人口 指乡镇地区常住居民户数中的常住人口数，即经常在家或在家居住 6 个月以上，而且经济和生活与本户连成一体的人口，与乡镇户数统计范围相一致。

农作物播种面积 指农业生产经营者应在日历年度内收获的农作物在全部土地（耕地或非耕地）上的播种或移植面积。凡是本年内收获的作物，无论是本年还是上年播种，都算为当年播种面积，但不包括本年播种，下年收获的作物面积。

农作物产量 指农业生产经营者日历年度内生产的农作物数量。

Explanatory Notes on Main Statistical Indicators

Value-added of Farming, Forestry, Animal Husbandry and Fishery refers to the value-added of goods produced or services provided by farming, forestry, animal husbandry, fishery in a given period of time. It shows the final results of the activities of production and management of agriculture and its contributions to the society.

The value-added of agriculture is calculated with two approaches:

(1) Production approach is a method from the production angle, i.e. total output of agriculture minus intermediate consumption of agriculture. The value-added of agriculture is usually calculated with the production approach as no complete accounting records of the rural households are available;

(2) Distribution approach is a method from the distribution angle, i.e. various incomes from the activities of production and management of the productive units of agriculture without intermediate consumption, including incomes of the rural laborers, welfare funds, profit and tax, depreciation of fixed assets and major overhaul and others.

Gross Output Value of Agriculture refers to the total volume of products of farming, forestry, animal husbandry, and fishery and the value of various services supporting the production of farming, forestry, animal husbandry and fishery in monetary terms, which reflects the total scale and total results of farming, forestry, animal husbandry and fishery production during a given period of time. It is an important indicator to observe the production level and development speed of farming, forestry, animal husbandry and fishery, to study the internal structure of farming, forestry, animal husbandry and fishery, and to review the proportionate relationship of farming, forestry, animal husbandry and fishery to industry, to national construction and to people's life. It is also the foundation for calculating the labor productivity and value-added of farming, forestry, animal husbandry and fishery.

Generally, the gross output value of farming, forestry, animal husbandry and fishery is calculated with the production approach. Where applicable, the gross output value of each single product is obtained by multiplying the output of each product by its price. These values are then summed up to obtain the output value of each sector. The sum of output values of all sectors is the gross output value of farming, forestry, animal husbandry and fishery.

Number of Rural Households refers to the residents who live in the administrative areas of townships (not including the location of the county people's government) for a long time (including more than one year), and also include rural households living within the administrative villages under the the location of the county people's government.

Rural Population refers to the number of residents in the rural households, live in the home for more than 6 months, and their economy and life are integrated with the household。The statistical coverage are consistent with the Number of Rural Households.

Sown Area of Crops refers to area of all land (cultivated or non-cultivated area) sown or transplanted with crops that are harvested within the calendar year by agricultural producers. All crops harvested within the year are counted as sown area, regardless of being sown in this year or the previous year. Crops sown this year but will be harvested in the coming year are excluded.

Crops Output refers to total output of crops produced by agricultural producers within a calendar year.
