# *PREFACE*

*Statistical Yearbook of the Republic of Montenegro is a basic publication of the Statistical Office of Montenegro, which in a thorough and systematic way provides set of the most important data on all areas of social and economic life.*

*This is the 34th edition of this complex publication. The first edition of the Statistical Yearbook was published in the National Republic of Montenegro in 1955 and the next one only in 1974. Since 1974, it has been published on a regular (annual) basis.*

*The present Yearbook as well as all previous ones is the result of the implemented Programme of statistical surveys. Besides the data collected and processed by MONSTAT, this Yearbook also contains the data from other authorities as well as those extracted from publications of international statistical institutions.*

*In order to improve the quality of this publication, MONSTAT has decided to translate it into English language and this is the second bilingual edition of Statistical Yearbook of Montenegro. Also, it contains a chapter: "International Review".*

*All kinds of remarks and suggestions shall be highly appreciated by our institution and seriously considered for further improvements of Statistical Yearbook of Montenegro as well as of our publishing and dissemination services in general.*

## NAČELA UREĐIVANJA GODIŠNJAKA

**Izbor i raspored građe**

Sistematizacija građe za ovaj Godišnjak izvršena je podjelom u tri dijela.

I Pregled za Republiku Crnu Goru,
II Pregled po opštinama i
III Međunarodni pregled.

***U okviru prvog dijela*** građa je izložena prema sljedećem redosljedu: Geografski pregled, klima i životna sredina, društveno i političko uređenje, stanovništvo, zaposlenost i zarade (plate), društvene djelatnosti i javna potrošnja, bruto domaći proizvod, potrošnja stanovništva, investicije, cijene, poljoprivreda, šumarstvo, industrija, građevinarstvo, spoljna trgovina, unutrašnja trgovina, ugostiteljstvo, turizam, saobraćaj, skladištenje i veze, obrazovanje, kultura i sport, zdravstvo, socijalno osiguranje, socijalna zaštita i pravosuđe.Težilo se, po pravilu, da se prikažu što duže vremenske serije sa detaljnim prikazivanjem pojedinih obilježja, naročito u posljednjoj godini serije. Od ovog principa je odstupano kada su nedostajali podaci za pojedine godine, zbog uporedivosti ili iz tehničkih razloga (nedostatak prostora).

***U drugom dijelu*** prikazan je izbor građe iz većine poglavlja prvog dijela sa nešto izmijenjenim redosljedom i to: Opšti pregled, društveno i političko uređenje, stanovništvo, zaposlenost i zarade, poljoprivreda, šumarstvo, građevinarstvo, saobraćaj, trgovina, ugostiteljstvo i turizam, obrazovanje, kultura i sport, zdravstvo, socijalna zaštita i pravosuđe.

Razumljivo je, da je obim građe u pregledu po opštinama nešto manji, jer zbog nedostatka prostora neki podaci dati su samo u posljednjoj godini-dvije, dio građe uopšte nije prikazan zbog toga što odgovarajući podaci ne postoje za opštine (podaci dobijeni uzorkom planiranim za Republiku Crnu Goru kao cjelinu) ili pak što podatak nije značajan kao karakteristika za malo područje kakvo predstavlja opština.

***U trećem*** dijelu koji se odnosi na međunarodni pregled prikazan je izbor podataka iz statističkih publikacija UN i specijalizovanih agencija UN, a izbor podataka je zasnovan na selekciji osnovnih podataka za koje postoji veći interes.

Detaljni i specifični podaci potrebni za rad stručnjaka užih specijalnosti dati su u drugim statističkim publikacijama Zavoda za statistiku Crne Gore .

**Izvori podataka i metodološka objašnjenja**

Većina podataka rezultat je rada zvaničnih statističkih organa prikupljenih redovnim statističkim izvještajima, povremenim popisima i anketama. Godišnjak sadrži i podatke ovlašćenih organa i organizacija za statistička istraživanja: Ministarstva pravde, Fonda penzijsko invalidskog osiguranja, Fonda zdravstva, Zavoda za zapošljavanje Crne Gore. Da bi građa bila još potpunija, uključeni su i podaci sljedećih institucija: Hidrometeorološkog zavoda, Seizmološkog zavoda, Uprave za nekretnine, Advokatske komore i drugih.

Izvori podataka za svako poglavlje posebno su dati u ''Medodološkim objašnjenjima'', ispred svakog poglavlja i data su onim redom kojim je prikazana i statistička građa u tabelarnom dijelu Godišnjaka. Objašnjenja inače, sadrže ukratko:

a) Izvore i metode prikupljanja podataka,
b) Obuhvatnost
c) Definicije

**Obuhvatnost i uporedivost**

S obzirom da je obuhvatnost pojedinih pojava koje statistika istražuje različita – potpuna ili djelimična - u ”Metodološkim objašnjenjima” je to posebno naglašeno. Kod pojava koje nijesu obuhvaćene potpuno, najčešće nijesu obuhvaćene sve jedinice (Vojska, MUP).

**Tehnika prikazivanja**

Numeracija tabela u Godišnjaku je izvršena na taj način što prvi broj u naslovu označava poglavlje, a drugi broj je redni broj tabele unutar poglavlja.

## PRINCIPLES OF COMPILING THE YEARBOOK

**Selection and sequence of contents**

The contents of this Yearbook is divided into three main sections:

I Review of the Republic of Montenegro
II Review by Municipalities
III International Review

The contents of ***the first section*** is distributed in the following way: Geography, Climate and Environment, Social and Political System, Population, Employment and Earnings, Social Activities and Public Consumption, Gross Domestic Product, Personal Consumption, Investments, Prices, Agriculture, Forestry, Industry, Construction, External Trade, Domestic Trade, Catering, Tourism, Transport, Storage and Communications, Education, Culture and Sport, Public Health, Social Insurance, Social Welfare and Judiciary. The intention was to present as long time series as possible and some variables in detail, especially for the last year of series. This principle was not followed in cases where data were missing for some years, where comparison was not possible, or certain technical reasons, such as insufficient space, did not allow so.

The contents of ***the second section*** is similar to the first section but with different chapters' sequence: General Review, Social and Political System, Population, Employment and Earnings, Agriculture, Forestry, Construction, Transport, Storage and Communications, Trade, Catering and Tourism, Education, Culture and Sport, Public Health, Social Welfare and Judiciary.

It is logical that the contents of the second section is shorter since some data are given only for last 1 or 2 years due to insufficient space, while some data at municipal level were missing (sample based surveys carried out only at republic level) or considered insignificant at that level.

Data shown in ***the third section***, that is International Review, are taken over from statistical publications of the UN and specialized UN agencies. The selection was based on the level of interest in data.

More detail and specific data, necessary for expert's analysis, are published in other statistical publications of MONSTAT.

**Data sources and methodological notes**

Majority of data are result of regular statistical surveys, periodical censuses and interviews conducted by MONSTAT. The Yearbook also contains the data from bodies and organizations authorized for carrying out certain statistical surveys: Ministry of Justice, Fund for Pension and Disability Insurance, Health Fund, Employment Bureau of Montenegro. In order to enrich the contents, additional data have been taken over from the following institutions: Hydro-meteorological Institute, Seismological Institute, Real Estate Directorate, The Bar, etc.

Explanations about data sources are given in Methodological Notes at the beginning of each chapter, following the sequence of tables in respective chapter. These Methodological Notes are divided into 3 parts (subtitles):

a) Sources and methods of data collection
b) Coverage
c) Definitions

**Coverage and comparison**

Precise explanation about full or partial coverage of statistical surveys is given in Methodological notes. The coverage was partial usually due to missing data from some sources such as Army, Ministry of Internal Affairs, etc.

**Data presentation technique**

The numeration of tables in the Yearbook is made so that the first number refers to the chapter number and the second one refers to the sequence number of respective table within the chapter.

## POLJOPRIVREDA

Podaci o opštem pregledu razvoja poljoprivrede prikupljeni su kompleksnim godišnjim izvještajem za koje su metodološka objašnjenja data u odgovarajućim poglavljima ovog Godišnjaka.

## Biljna proizvodnja

**Izvori i metodi prikupljanja podataka**

Redovnim godišnjim izvještajima poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga) prikupljaju se podaci o površinama, voćnim stablima, čokotima vinove loze, proizvodnji i domaćoj preradi, a podaci se baziraju na knjigovodstvenoj i drugoj evidenciji ovih organizacija.

Za privatna poljoprivredna gazdinstva podaci za površine su procjene zasnovane na podacima sveobuhvatnog katastra. Tako se podaci o površinama, voćnim stablima, čokotima vinove loze, proizvodnji i domaćoj preradi na privatnim gazdinstvima dobijaju procjenom.

Do 1961. godine procjene su vršile posebne opštinske komisije u čiji sastav su ulazili pored predstavnika opštine i poljoprivredni stručnjak i sami poljoprivrednici. Od 1962. procjenu obavljaju procjenitelji. Na području Crne Gore procjenu vrši 65 procjenitelja, a teritorija Republike je podijeljena na 195 procjenbenih područja. Za statističke procjenitelje se uzimaju poljoprivredni stručnjaci ili dobri poznavaoci lokalnih prilika, koji su za tu svrhu obučeni i sa kojima statistički organi održavaju stalne kontakte. Statistički procjenitelji se prilikom procjenjivanja oslanjaju na najnovije podatke katastra, na procjene iz prethodnih godina, na prikupljene informacije od poljoprivrednih proizvođača i stručnjaka, na svoja lična zapažanja i na druge izvore.

Potrošnja vještačkih đubriva izračunata je na bazi podataka redovnih izvještaja poljoprivrednih gazdinstava, i poljoprivrednih anketa koje se sprovode od 1956. godine.

Godišnjim izvještajima poljoprivrednih preduzeća i zemljoradničkih zadruga prikupljeni su podaci o poljoprivrednim oruđima i mašinama, potrošnji elektroenergije, maziva i sredstava za zaštitu bilja.

**Obuhvatnost**

Podacima statistike biljne proizvodnje obuhvataju se svi fondovi i proizvodnja poljoprivrednih preduzeća i zemljoradničkih zadruga koje se bave biljnom proizvodnjom. Ove jedinice dostavljaju i izvještaje za dio proizvodnje privatnih gazdinstava, koja se ostvaruju u kooperaciji sa tim preduzećima.

Za privatna poljoprivredna gazdinstva podacima se obuhvataju cjelokupne površine i prinosi, kao i površine i prinosi van poljoprivrednih gazdinstava (domaćinstva ne-poljoprivrednika, bašte u gradovima i sl.).

**Definicije**

*Poljoprivredne površine* su zemljišne površine koje se koriste za poljoprivrednu proizvodnju. Čine je: obradive površine, pašnjaci, ribnjaci, trstici i bare.

*Obradive površine* se podrazumijevaju zemljišne površine na kojima se gaje ratarski i povrtlarski usjevi, višegodišnji zasadi trave, i na kojima se vrše obrada, kosidba i drugi poljoprivredni radovi i, po pravilu, ubiraju prinosi svake godine. Čine je: oranice i bašte, voćnjaci, vinogradi i livade.
*Oranične površine (njive)* su zemljišne površine na kojima se obavlja ratarska proizvodnja. Na njima se po utvrđenom redu (plodoredu) siju ratarski usjevi: žita, industrijsko bilje, povrtno i krmno bilje. U oraničnu površinu se uračunavaju i površine koje su «radi odmora« ostale neobrađene: zeleni ugar ili crni ugar,

## AGRICULTURE

Data on general review of agricultural development are collected through complex annual reports. Methodological explanations are given in the corresponding chapters of the Yearbook.

## Crop Production

**Sources and methods of data collection**

Regular annual reports of agricultural organizations (agricultural enterprises and cooperatives/collective farms) provide data on area, fruits, vine, production and processing, and these data are based on bookkeeping and other records.

For private agricultural holdings, data on areas are *estimates* based on data taken from comprehensive cadastral records. Therefore, data on area, fruits, vine, production and processing on private farms are obtained by estimates.

Until 1961, estimates had been made by special municipal commissions comprised of a representative of municipality in addition to agricultural expert and farmers themselves. As of 1962, the estimation is made by estimators. A group of 65 statistical estimators has been set up to cover 195 estimation areas within the Republic. Agricultural experts, who are quite familiar with local conditions and trained for these tasks, are engaged as *statistical estimators*. They have regular contacts with statistical office, and their work is based on the latest cadastral data, estimates from preceding years, data of private agricultural holdings and experts, as well as their own observations and other sources.

Consumption of fertilizers is calculated from data of regular reports of agricultural holdings and agricultural surveys that have been conducted since 1956.

Annual reports of agricultural enterprises and collective farms provide data about agricultural tools and machinery, consumption of electricity, grease and pesticides.

**Coverage**

Statistical data on crop production cover funds and production of agricultural enterprises and cooperatives/collective farms involved in crop production. These responding units are also providing data on a part of private agricultural production, realized in cooperation with them.

As far as private agricultural holdings are concerned, the corresponding data cover total area and yields, as well as area and yields out of agricultural holdings (non-agricultural households, town gardens and similar).

**Definitions**

*Agricultural areas* are land areas used for agricultural production. Agricultural area includes cultivable areas, pastures, fishponds, reeds and pools.

*Cultivable area covers* land areas where farm crops, vegetable crops, perennial plantings and grass are grown; cultivation, mowing and other agricultural works performed and yields gathered every year. Cultivable area consists of arable land and gardens, orchards, vineyards and meadows.

*Arable land (fields)* refers to land areas solely intended for field crop production. These areas are sown with the following crops, in rotation: cereals, industrial crops, vegetable crops and fodder crops. In addition, arable area includes “recovering areas” that remained uncultivated: green fallow or black fallow, neglected land and similar. In addition, arable lands are also areas under vine and fruit nurseries and areas under clover and Lucerne (alfalfa).

*Productive fruit-trees* and *grapevines* are fruit-trees and grapevines capable by their physiological maturity to grow a fruit under normal vegetative conditions, regardless of whether or not they bore fruits during reference year.

voćnim i loznim rasadnicima, kao i djetelišta i lucerišta.

*Rodnim stablima voća i čokota loze* se smatraju stabla-čokoti, koji su prema svojoj fiziološkoj zrelosti sposobna da pod normalnim uslovima za vegetaciju zametnu plod, bez obzira da li su u odnosnoj godini rodila ili ne.

*Prinos usjeva* je iskazan kao ambarski prinos normalne vlažnosti, po odbitku svih gubitaka prilikom žetve (berbe), transporta i vršidbe.

*Prinos po jedinici površine* ( po ha ) obračunat je na požnjevenu površinu.

*Prinos po stablu-čokotu* obračunava se na rodna stabla, odnosno, na čokote vinove loze ili hibride.

Vinom se smatra proizvod dobijen alkoholnim vrenjem šire ili kljuka od svježeg grožđa plemenite vinove loze ili hibrida.

*Pod mekom rakijom* podrazumijeva se rakija jačine do 30 vol. % alkohola (do 12 gradi) a pod *ljutom rakijom* – rakija jačine preko 30 vol. % alkohola (preko 12 gradi).

## Stočarstvo

**Izvori i metodi prikupljanja podataka**

Redovnim godišnjim izvještajima poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga) prikupljaju se podaci o broju i bilansu stoke, kao i podaci o proizvodnji mlijeka, jaja, vune i meda. Podaci za privatna poljoprivredna gazdinstva i domaćinstva prikupljaju se godišnjom anketom, koja je od 1961.- 1964. godine bila organizovana na principu prostog slučajnog uzorka, da bi od 1965. bio primijenjen dvoetapni uzorak. Broj anketiranih individualnih poljoprivrednih gazdinstava obuhvaćenih anketom iznosio je 15 %. Uzorak za anketu o broju stoke sa stanjem 15. januar svake godine, sprovodi se od 1956. godine. Ovom anketom dobijeni su podaci i o obrtu stada.

Godine 1993. primijenjen je dvoetapni stratifikovani uzorak bez ponavljanja kojim je bilo obuhvaćeno preko 5070 privatnih poljoprivrednih gazdinstava i domaćinstava. Isti je korišćen za 13 redovnih statističkih istraživanje Ankete o broju stoke u domaćinstvima. U 2004. god. ažurirana je baza podataka na osnovu koje je izvršen izbor novog uzorka, primijenjen je dvoetapni stratifikovani uzorak bez ponavljanja sa popisnim krugovima kao primarnim i domaćinstvima kao sekundarnim jedinicama. Uzorkom je obuhvaćeno preko 4940 privatnih poljoprivrednih domaćinstava. Isti uzorak je korišćen za anketu o broju stoke u domaćinstvima sa stanjem 15. 01. 2005. i 15. 01. 2006. godine. Ankete o broju stoke zasnovane na novom uzorku su dale razlicite rezultate u odnosu na predhodnu anketu zasnovanu na starom okviru.Postojali su opravdani razlozi da se sumnja u kvalitet rezultata i u jednom i u drugom slucaju i primijenjena je jedna od modernih statističkih metoda koja se koristi u savremenoj statistici a to je kontrola kvaliteta. Uporedo sa anketom zasnovanom na novom uzorku izvedena je Pilot studija 2005 godine " ocjena kvaliteta okvira za anketu o poljoprivrednim gazdinstvima"na osnovu koje je izvršen izbor novog uzorka. Pilot studijom izvršena je ocjena kvaliteta okvira a takođe dobijeni su i korekcioni faktori koji su primijenjeni za korekciju rezultata Ankete o broju stoke u poljoprivrednim gazdinstvima čime je ispravljena nedovoljna pokrivenost okvira. Zbog velike razlike u brojnom stanju stoke , naročito kod pojedinih vrsta stoke (npr. goveda) nije se mogla primijeniti metoda vremenskog sravnjenja serije što je uslovilo potpuno novi početak za statistiku stočarstva. Takođe primijenjeni koeficijenti koji su ispravili nedovoljnu pokrivenost u okviru zbog veličine uzorka za Pilot studiju mogu se primijeniti isključivo za nivo Republike a ne i za nivo Opština.

Podaci o proizvodnji prirasta žive stoke i proizvodnji mesa obračunati su na osnovu raspoloživih podataka o bilansima stoke Ankete o stoci, godišnjeg izvještaja o stočarstvu poljoprivrednih organizacija i podataka o klanju stoke na klanicama.
Podaci o veterinarskim radnicima i objektima preuzeti su od Ministarstva poljoprivrede, šumarstva i vodoprivrede Republike Crne Gore.

*Yield of crops* is shown as the granary yield of normal humidity after deduction of all losses/damages during a harvest (gathering), transportation and threshing.

Calculation of *a yield per area* unit (per hectare) is based on the harvested area.

*Calculation of a yield per fruit tree - grapevine* is based on productive fruit or grapevines.

*Wine* relates to a product obtained by alcoholic fermentation of a must or crushed grapes of pure vines or hybrids.
*Weak brandy* is a brandy up to 30 vol.% of alcohol (up to 12 grades), and *strong brandy* is a brandy over 30 vol.% of alcohol (over 12 grades).

## Livestock breeding

**Sources and methods of data collection**

Data on number of livestock and livestock turnover, as well as data on production of milk, eggs, honey and wool are collected through regular annual reports of agricultural organizations (enterprises and collective farms) and annual surveys on private agricultural holdings and households. From 1961 to 1964, it had been organized by a principle of simple random sample, and as of 1965, a two-stage sample was introduced. Since 1968, 15 percent of agricultural holdings were covered by the survey. As of 1956, a livestock sample survey was carried out every year, on January 15th. The survey was also providing data about livestock turnover.
In 1993, a two-stage stratified simple random sample with no repetition was used covering 5070 private agricultural holdings and households. The same sample was used for 13 regular Livestock surveys in households. In 2004, the database was updated as the frame of a new sample, and two-stage stratified sample with no repetition has been introduced with enumeration areas as primary, and households as secondary units. The sample covers over 4940 private agricultural holdings. The same sample was used for Livestock survey as on 15.01.2005 and 15.01.2006. Livestock surveys based on new sample gave different results compared to the previous survey based on the old frame. There were justifying reasons to suspect in the quality of results in both cases, therefore quality control, one of modern statistical methods used in modern statistics, was applied. Parallel with the survey based on new sample, the Pilot study 2005 "Quality assessment of frame for Survey on agricultural holdings" was done, and on its basis, the new sample was created. Pilot study did the assessment of quality of frame and gave correction factors applied for the correction of the results of the Livestock survey in agricultural holdings, which corrected the under-coverage of the frame. Due to the considerable difference in be livestock balance, especially in certain types of livestock (i.e. cattle) the method of harmonization of time series could not be done that influenced the completely new start in livestock statistics. Additionally, the applied coefficients corrected the under-coverage in the frame and due to size of the sample for the Pilot study; they could only be applied to the level of Republic, and not to the municipality level.

Livestock increase and meat production data have been calculated on the basis of livestock balance data from the Survey on livestock, annual report on livestock breeding of agricultural organizations and data on slaughtering in abattoirs.
Data on veterinary personnel and facilities are taken over from the Ministry of Agriculture, Forestry and Water Management of the Republic of Montenegro.

**Coverage**

Data on the number and balances of livestock cover livestock of agricultural enterprises, agricultural co-operatives, private agricultural holdings and non-agricultural households.

**Definitions**

The *livestock balance* represents changes in number of livestock during reference year.

**Obuhvatnost**

Podaci o broju i bilansima stoke obuhvataju stočni fond u poljoprivrednim preduzećima i zemljoradničkim zadrugama, privatnim poljoprivrednim gazdinstvima i nepoljoprivrednim domaćinstvima.

**Definicije**

*Bilans stoke* predstavlja obrt stada tokom godine u kome se registruju promjene u brojnom stanju stoke.

*Prirast stoke* predstavlja proizvodnju žive mjere stoke tokom godine, kao rezultat priploda, porasta i gojenja stoke. Čini ga:

- razlika težine žive stoke na kraju i na početku godine;
- razlika težine prodate i kupljene stoke;
- živa težina zaklane stoke na gazdinstvima.

*Bruto težina* stoke predstavlja težinu životinja neposredno pred klanje.

*Neto težina* stoke predstavlja težinu zaklanih životinja poslije otklanjanja određenih djelova u zavisnosti od vrste i kategorije stoke, tj. težinu očišćene zaklane životinje.

Proizvodnja mlijeka se odnosi na neto – količine, tj. na pomuženo mlijeko, ne računajući količine koje posišu telad i jagnjad.

## Ribarstvo

**Izvori i metodi prikupljanja podataka**

Osnovni cilj statistike ribarstva je prikupljanje podataka o ulovu morske i slatkovodne ribe. Pored ovog zadatak ove statistike je da prikupi podatke o: zaposlenom osoblju, o ribarskim objektima, o plovnim sredstvima, ribarskoj opremi, proizvodnji i ulovu ribe, proizvodnji ikre i mlađi i potrošnji hrane u ribnjacima.

Jedinice posmatranja u statistici ribarstva su: preduzeća za proizvodnju, ulov, promet i preradu ribe, ribarske zadruge, ostale privredne organizacije koje se bave ulovom i proizvodnjom ribe, Institut za biologiju mora, individualni ribari koji se bave ulovom za sopstvenu potrošnju ili prodaju i udruženja za sportski ribolov (bez obzira gdje se vrši ulov).
Podaci o slatkovodnom i morskom ribarstvu prikupljaju se izvještajnom metodom i metodom procjena.

**Obuhvatnost**

Podaci o morskom i slatkovodnom ribarstvu koji se prikupljaju izvještajnom metodom, a popunjavaju se iz knjigovodstvene evidencije preduzeća i zadruga, koje se bave ribolovom kao osnovnom ili sporednom djelatnošću, po pravilu se obuhvataju u potpunosti.

Međutim podaci koji se obezbjeđuju metodom procjena (ulov ribe privatnih ribara), zbog nepostojanja adekvatne ili nikakve evidencije, često se ne obuhvataju u potpunosti, naročito kada se radi o detaljima određene pojave i nižim nivoima.

**Definicije**

*Privredni ribolov* je djelatnost ulova ribe i drugih živih organizama slatkih i slanih voda zbog sticanja dobiti.

*Brod* je svaki plovni objekat koji ima palubu i zapreminu veću od 28,32 $m^3$ (10 BRT).
Pod *čamcem* se podrazumijeva svaki plovni objekat sa manje od 10 BRT.

production, livestock growing and fattening, throughout the year. It includes:

- livestock weight difference at the end and beginning of year
- weight difference between sold and purchased livestock
- live weight of slaughtered livestock in holdings

*Gross-weight of livestock* is the weight of live animal just before slaughtering.

*Net-weight* of livestock is the weight of slaughtered animal after removal of certain parts, depending of livestock type and category, i.e. the weight of slaughtered and dressed animal.

*Milk production* refers to net quantities, i.e., fresh-milked quantities, excluding quantities sucked-up by calves and suckling lambs.

## Fishing

**Sources and methods of data collection**

Primary objective of fishery statistics is data collection about the catch of sea and freshwater fish. Apart from that, the task of this statistics is also to collect data about employed persons, fishing objects, vessels, fishery equipment, production and catch of fish, production of spawn and progeny and consumption of food in fishponds.

Units to be observed in fishery statistics are: enterprises for production, fishing, selling and manufacture of fish, fishery cooperatives, other economic organizations involved in fishery, Institute for Biology of the Sea, individual fishers catching fish for their own consumption or sale, and sport fishery associations (no matter where the fishing takes place).

Data on sea and freshwater fishing are obtained by reporting method and method of estimation.

**Coverage**

Data on sea and freshwater fishing, collected by reporting method and filled in from bookkeeping evidence of enterprises and cooperatives dealing with fishing as primary or secondary activity, are, as a rule, covered entirely.

However, data obtained by method of estimation (catches of the private fishers) are not covered entirely due to inadequate or missing evidence, especially about details of a certain category and lower levels.

**Definitions**

*Economic fishing* is an activity of fish catches and other live animals in freshwater and seawaters, for economic purposes.

*Ship* is any sailing object, having a board and over 28.32 $m^3$ (10 GRT).
*Boat* is any sailing object of less than 10 GRT.
