CHAPTER V
AREA AND PRODUCTION OF CROPS AND CROP UTILIZATION

1 INTRODUCTION

Ethiopian farming largely produces only enough food for the peasant holder and his family for consumption, leaving little to sell. This inadequate volume of production is ascribed to the tardy progress in the farming methods and scattered pieces of land holdings. Under this traditional sector, agriculture is practiced on public land and most of the produce is mainly for own consumption. The diverse climate of the country and the multiple utilizations of crops have prompted the vast majority of agricultural holders to grow various temporary and permanent crops. Despite the variation in the volume of production, the relative importance and pattern of growth of these crops are largely similar across many of the regions. This similarity is well observed and demonstrated in the statistical tables presented in this report. In some regions there seems to be a shift in choice of crops grown. Teff, maize and sorghum are the grain crops that figure prominently in volume of production in Amhara Region.

There is a general agreement that the performance of an agricultural system should achieve a steady supply of food to the people of a country. But, unless special attention is focused on agriculture its performance can be impeded by vagaries of nature, population growth and scarcity and fragmentation of land, thus, affecting food supply and posing a challenge to the federal and regional governments. This situation calls for an overhaul of the agricultural system in the country or the regions.

In order to have a flourishing agriculture, which sustains reliable food supply, the federal and regional governments have to formulate and implement farm programs that ensure food security. The preparation, execution, monitoring and assessment of these programs entail statistics on agriculture particularly crop production since it is the prime target that national or regional agricultural policies aim at.

The collection of data on crop production should encompass all crop seasons in the agricultural calendar and farming activities in both rural and urban areas. It should also include the wide range of crops that are grown and embodied in the food security system, which are indispensable for a sustained provision of staple diet and other cash crops like coffee and Chat.

In view of this, crop production data for private peasant holdings for both Meher and Belg seasons in both rural and urban areas were collected in the census to provide the basis for decision making in the process of implementing timely food security measures and to make policy makers aware of the food situation in the country.

Thus, in this chapter the census data on production of temporary crops/annual crops such as cereals, pulses, oilseeds, vegetables and root crops are presented in Section 2. Production of permanent crops that included fruit crops, stimulant crops and other permanent crops are dealt with in Section 3. Moreover, the utilization of temporary crops as well as permanent crops for various purposes such as household consumption, seed, sale, paying wages in kind …etc are indicated in Section 4. Furthermore, these census data should also be presented for all the weredas in the region. Hence, tables providing these data at wereda level are also given at the end of the chapter. Standard errors and Coefficients of variation for selected variables are provided as an annex to this chapter.

2. PRODUCTION OF TEMPORARY / ANNUAL CROPS

The types of temporary crops on which data were collected during the census are those that food security embraces: that is, the crops that are the staple diets in the country. In the statistical tables, these crops have been categorized into five groups for simplicity of description and comparison purposes. The groups are cereals, pulses, oilseeds, vegetables and root crops. The crops within each group have some similarity, which made the categorization necessary.

2.1 Cereals

These are crops that are produced in greater volume compared to the other crops because they are the principal staple crops and export commodities at times of bumper harvest in the country. Between the months of September 2001 and August 2002 it was learned that 242,794 quintals of cereals worth 106,028,521 Birr was exported from Ethiopia to various countries (CSA, external trade statistics).

Cereals are grown in almost all regions of Ethiopia with notable variation in the extent of areas planted and the volume of production obtained. This variation is seemingly caused by a shift in choice of crops by the holders and difference in weather conditions. Summary Tables V-1 and V-2 reinforce this thought further by giving a highlight on the size of area planted to Teff, sorghum and barley and volume of production of Teff, maize and sorghum harvested in Amhara Region when compared with other crops produced in the same region.

Summary Tables V-1 and V-2 show that 76.78% of the regional grain crop area was under cereals and 82.38% of the grain production was that of cereals. Out of all area under grain, Teff, sorghum and barley took up 26.03%, 13.56% and 11.36%, yielding 21.01%, 15.58% and 9.95% of the regional grain production, respectively. Maize exceeded sorghum and barley in terms of volume of production constituting 19.33% of the grain production.

Summary Tables V-3 – V-22 and Figures V-1 – V-3 present the census data on area and production of temporary crops at zonal level for Amhara Region. As summary Tables V-3-V-22 indicate that the cereal situation in the zones is about the same as that of the region. As summary Tables V-3 and V-4 indicate, 75.96% of the grain crop area in North Gonder zone was under cereals and 80.87 % of the grain production was drawn from the same crops. Of all the area under grain crops in the zone, sorghum and Teff covered 26.13 % and 20.69 % of the area under grain crops and 31.54 % and 15.75 % of the zonal grain production, respectively.

In South Gonder zone, 71.52 % of the grain crop area and 76.26% of the production went for cereals as shown in Summary Tables V-5 and V-6. Teff and Barley covered 29.17 % and 10.25 % of the grain crop area yielding 24.97 % and 10.39 % of the grain production, respectively. The volume of maize produced in the zone was greater than barley as shown in the same summary table V-6.

As shown in Summary Tables V-7 and V-8, 78.37 % of the grain crop area and 80.59 % of the grain production in North Wollo zone were that of cereals. Teff, sorghum and barley were the major cereal crops grown both in terms of area planted and production obtained. They covered 24.29 %, 20.07 % and 20.00 % of the area under grain crops and 19.76 %, 27.50 % and 19.40 % of the grain production, in that order.

In South Wollo zone, cereals contributed 74.04 % of the grain crop area and 76.29 % of the production. Teff, barley, sorghum and wheat took up 22.53 %, 16.71 %, 15.01 % and 13.89 % of the area and 18.89 %, 15.55 %, 19.03 % and 15.95 % of the production, respectively, as indicated in Summary Tables V-9 andV-10.

Summary Tables V-11 and V-12 show that 77.01 % of the area under grain crops was that of cereals and 79.72 % of the production was drawn from cereals too in North Shewa Zone. Sorghum, Teff, Wheat and Barley took up 22.31 %, 20.66 %, 17.16 % and 14.22 % of the grain crop area and 30.59 %, 17.00 %, 19.79 % and 10.00 % of the grain production, in the same order.

In East Gojam Zone, 78.86 % of the grain crop area and 84.56 % of the production went for cereals as seen in Summary Tables V-13 and V-14. Teff, wheat, maize and barley shared 39.47 %, 13.70 %, 10.94 % and 9.77 % of the area under grains and 36.33 %, 17.06 %, 17.61 % and 8.92 % of the grain production in the zone, respectively.

In West Gojam zone, cereals, as shown in Summary Tables V-15 and V-16 took up 78.01 % of the grain crop area and 87.77 % of the production. Maize, Teff and Finger

millet were planted to 27.42 %, 25.08 % and 14.23 % of the zonal grain crop area resulting in 50.71 %, 15.69 % and 11.12 % of the grain production, in the same order.

Summary Tables V-17 and V-18 show that 78.44 % of the grain crop area was under cereals and 78.19 % of the production was obtained from cereals in Waghamra zone. Teff, sorghum and barley took up 27.97 %, 22.12 % and 16.33 % of the area under grains and 22.03 %, 26.91 % and 16.88 % of the grain production in the zone, respectively.

In Awi zone, 81.14 % of the grain crop area and 93.08 % of the production went for cereals as indicated in Summary Tables V-19 and V-20. Teff, finger millet and maize covered 26.95 %, 20.84 % and 18.81 % of the grain crop area and 16.94 %, 17.43 % and 45.34 % of the production in the zone, in that order.

Summary Tables V-21 and V-22 demonstrate that 89.89 % of the area under grain crops in Oromia zone is that of cereals. The same crops contributed 90.12 % of the grain production. Sorghum, Teff and maize added 47.73 %, 20.75 % and 18.47 % of the grain crop area and 57.58 %, 16.04 % and 14.75 % of the production to the zonal total, respectively.

2.2 Pulses

These crops are essential part of the dietary requirements for most Ethiopians. They also form a significant commodity group of export, earning a considerable amount of foreign exchange for the country and cash for peasant farmers. In 2001/02 (1994) E.C, between the months of September and August, 1,229,366 quintals of pulses valued at 351,997,759 Birr was exported from Ethiopia to various countries (CSA, external trade statistics). These are some of the grounds for growing various pulses in all regions of the country with varying quantities. There is no doubt that economic benefits can accrue to the country from the production and export of more pulses if the agriculture in Ethiopia is given due attention in this regard.

A view of Summary Tables V-1 and V-2 enables to detect that only 17.37% of the regional grain crop area was under pulses and 15.03% of the grain production consisted of the same crops. Of the regional area under grain crops, 5.56%, and 3.87%, were planted to horse beans and chickpeas, in that order. The production obtained from horse beans, and chickpeas was 6.25%, and 3.23% of the regional grain total, respectively.

In North Gonder zone, pulses contributed 15.59 % of the grain crop area and 14.68 % of the production to the zonal total as shown in Summary Tables V-3 and V-4. Chick-peas, horse beans and field peas made up 5.67 %, 4.83 % and 2.49 % of the grain crop area and 5.48 %, 5.50 % and 1.99 % of the production in the zone, respectively.

In South Gonder zone, 21.41 % of the grain crop area was under pulses and 20.19 % of the grain production consisted of pulses. Horse beans, chick peas and field peas made up 5.92 %, 5.34 % and 3.23 % of the area under grain crop and 7.45 %, 4.58 % and 3.14 % of the volume of production, in the same order, as shown in Summary Tables V-5 And V-6.

In North Wollo zone, pulses added 19.62 % of the area under grain crops and 18.38 % of the production to the zonal total. Horse beans, field peas and chick peas took up 4.94 %, 4.83 % and 4.64 % of the grain crop area and 6.43 %, 3.72 % and 4.03 % of the production in the zone, respectively, as indicated in Summary Tables V-7 and V-9.

In South Wollo Zone, the area under pulses was 24.27 % of the grain crop area contributing 22.76 % of the grain production as shown in Summary Tables V-9 and V-10. Horse beans, lentils, field peas and chick peas added 7.83 %, 4.87 %, 4.28 % and 3.41 % of the grain crop area and 10.39 %, 2.36 %, 3.43 % and 2.77 % of the production to the zonal total, respectively.

In North Shewa zone, pulses made up 21.41 % of the grain crop area and 19.53 % of the production, as presented in Summary Tables V-11 and V-12. Horse beans, chick

peas and lentils covered 7.65 %, 4.48 % and 3.01% of the area under grain crops and 10.04 %, 4.23 % and 1.40 % of the production, respectively.

In East Gojam Zone, pulses accounted for 16.39 % of the grain crop area and 13.63 % of the production as shown in Summary Tables V-13 and V-14. Horse beans, chick-peas and vetch covered 4.91 %, 3.73 % and 3.26 of the grain crop area and 4.59 %, 3.11 % and 3.13 % of the production in the zone, respectively.

In West Gojam Zone, pulses covered 11.46 % of the area under grain crops and 8.52 % of the production, as presented in Summary Tables V-15 and V-16. Horse beans, vetch and chick peas took up 4.41 %, 2.52 % and 1.84 % of the grain crop area and 3.95 %, 1.99% and 1.00 % of the grain production, respectively.

In Waghamra zone, 19.41 % of the grain crop area was under pulses and 20.90 % of the production was that of pulses too. Horse beans, lentils and field peas shared 10.58 %, 3.00 % and 2.53 % of the grain crop area and 14.08 %, 1.99 % and 2.53 % of the production, respectively, as shown in Summary Tables V-17 and V-18.

In Awi zone, 4.90 % of the grain crop area was under pulses and 2.78 % of the production went for the same crops, as indicated in Summary Tables V-19 and V-20. Horse beans and field peas shared 1.70 % and 1.56 % of the area under grain crops and 1.26 % and 0.71 % of the grain production, respectively.

In Oromia Zone, pulses took up 6.67 % of the grain crop area and 7.46 % of the production, as shown in Summary Tables V-21 and V-22. Chickpeas and haricot beans covered 4.56 % and 1.10 % of the grain crop area, respectively, and resulted in small volume of production.

2.3 Oilseeds

These crops are also of paramount importance as a source of cooking oil used to provide the fat required in the food consumed by the residents in the region. Moreover, oil crops have become a major commodity of export earning a great deal of

foreign exchange. Between September 2001 and August 2002, Ethiopia exported 953,088 quintals of oilseeds valued at 351,952,634 Birr (CSA, external trade statistics) signaling that an increase in the production and export of these crops will definitely generate more money.

Summary Tables V-1 and V-2 indicate that 5.85% of the regional grain crop area was under oilseeds and 2.58 % of the regional grain production was that of the oil seeds. Of the total area under grain crops and grain production in Amhara Region, 3.92% and 1.34% went for Neug, in that order.

In North Gonder zone, oilseeds covered 8.45 % of the grain crop area and 4.44 % of the production, as shown in Summary Tables V-3 and V-4. Neug and sesame accounted for 4.33 % and 2.96 % of the area under grain crops and 1.90 % and 1.97 % of the production, respectively,

In South Gonder Zone, oilseeds accounted for 7.07 % of the grain crop area and 3.56 % of the production, as demonstrated in Summary Tables V-5 and V-6. Neug and linseed shared 5.28 % and 1.21 % of the area under grain crops and 2.30 % and 0.57 % of the production, respectively.

In North Wollo Zone, oilseeds made up 2.01 % of the grain crop area and 1.02 % of the production, as indicated in Summary Tables V-7 and V-8. Linseed covered 1.36 % of the area under grain crops and its production was small compared with other crops.

In South Wollo Zone, the oilseeds situation isn't different from North Wollo Zone as portrayed in Summary Tables V-9 and V-10. Oilseeds accounted for 1.69 % of the grain crop area in the zone.

In North Shewa Zone, oilseeds shared 1.58 % of the grain crop area. The production of oilseeds was not significant when compared with other crops in the zone as shown in Summary Tables V-11 and V-12

In East Gojam Zone, oilseeds covered 4.76 % of the grain crop area and 1.81 % of the production. Neug accounted for 3.79 % of the area under grain crops and 1.30 % of the production in the zone, as indicated in Summary Tables V-13 and V-14.

In West Gojam Zone, 10.53 % of the grain crop area was under oilseeds yielding 3.72 % of the zonal grain production. Neug and rapeseed shared 8.82 % and 1.15 % of the area under grain crops and 2.17 % and 1.37 % of the grain production in the zone, as indicated in Summary Tables V-15 and V-16.

In Wahgamera Zone, oilseeds covered 2.15 % of the zonal grain crop area and the volume of production obtained from oilseeds was negligible when compared with other grain crops. Linseed took up 1.00 % of the grain crop area in the zone, as shown in Summary Tables V-17 and V-18.

In Awi Zone, oilseeds accounted for 13.96% of the zonal grain crop area and 4.14% of the production, as shown in Summary Tables V-19 and V-20. Neug covered 11.84 % of the grain crop area and 2.67 % of the production in the zone.

In Oromia Zone, the area under oilseeds was 3.44 % of the zonal grain crop area and the production was 2.41 % of the grain total, as presented in Summary Tables V-21 and V-22. Sesame accounted for 2.85 % of the grain crop area and 2.05 % of the production in the zone.

2.4 Vegetables

These crops like fruits are also a good source of nourishment necessary for the healthy growth of humans. Dieticians often advise people to eat more of vegetables for their nutritional values. Vegetables are relatively cheaper and better available than other farm products in urban centers because these crops are usually grown as garden produces sometimes using irrigation. It may be worth to know that a certain amount of foreign exchange is drawn from vegetable exports. For instance between September 2001 - August 2002 Ethiopia exported 61,070 quintals of vegetables worth 11,543,144 Birr to various countries (CSA, external trade statistics). Thus, on the

grounds that vegetables are nutritionally and economically important, it is worth expanding vegetable farming.

When one looks at Summary Tables V-1 and V-2 to have a picture of the vegetable production in Amhara Region one realizes that a lot has to be done in this regard. The volume of vegetables produced and the area they are planted to in the region are insignificant when compared with the other crops. Red peppers, Ethiopian cabbage and green peppers took up 87.57%, 4.55% and 4.52% of the regional area under vegetables, respectively. The same crops formed 44.89%, 7.99% and 18.21% of the regional volume of vegetable production, in the same order.

As Summary Tables V-3 and V-4 show, the area devoted to vegetables and the production obtained are insignificant in North Gonder Zone, when compared with other grain crops. Red peppers and green peppers accounted for 92.16 % and 3.69 % of the area under vegetables and 65.73 % and 19.42 % of the vegetable production in the zone, respectively.

In South Gonder Zone, the volume of production obtained and the area planted to vegetables are small too. Red peppers accounted for 88.85 % of the area under vegetables and 70.03 %, 11.41 % and 5.71 % of the vegetable production were drawn from red peppers, Ethiopian cabbage and green pepper, in that order, as indicated in Summary Tables V-5 and V-6.

In North Wollo Zone, red peppers, green peppers and Ethiopian cabbage took up 76.52%, 11.09 % and 7.78 % of the area under vegetables and 32.17 %, 35.57 % and 21.68 % of the production, in the same order, as shown in Summary Tables V-7 and V-8.

In South Wollo Zone, red peppers, green peppers and Ethiopian cabbage covered 57.40 %, 9.08 % and 4.94 % of the area under vegetables, respectively as presented in Summary Tables V-9 and V-10. The same crops yielded 13.14 %, 19.43 % and 9.98 % of the vegetable production, in the same order.

In North Shewa Zone, red peppers, green peppers, Ethiopian cabbage and tomatoes covered 71.46 %, 17.85 %, 5.61 % and 4.05 % of the area under vegetables and 24.52 %, 42.53 %, 13.38 % and 16.73 % of the production, in the same order, as shown in Summary Tables V-11 and V-12.

In East Gojam Zone, red peppers, green peppers and Ethiopian cabbage shared 79.47 %, 15.32% and 4.47 % of the area under vegetables and 42.47 %, 46.71 % and 8.05 % of the production, respectively, as shown in Summary Tables V-13 and V-14.

In West Gojam Zone, the area under red peppers, green peppers and Ethiopian cabbage accounted for 97.20 %, 1.06 % and 1.06 % of the area under vegetables and the production of the red peppers and Ethiopian cabbage totaled 41.68 % and 2.95 % of the vegetable production, in the same order, as shown in Summary Tables V-15 and V-16.

In Awi Zone, red peppers and Ethiopian cabbage, as Summary Tables V-19 and V-20 show, shared 80.93 % and 16.74 % of the area under vegetables and 71.81 % and 14.65 % of the production, respectively.

In Oromia Zone, red peppers, Ethiopian cabbage, tomatoes and green peppers took up 69.94 %, 11.79 % 9.86 % and 6.56 % of the vegetable area and 24.73 %, 47.58 %, 1.07 % and 26.48 % of the production, respectively, as indicated in Summary Tables V-21 and V-22.

2.5 Root Crops

Some root crops like onion and garlic are indispensable part of the daily meal of the Ethiopian population. These crops are essential to improve the taste and scent of the food. Potato, which is one of nature's precious gifts, is also very common in the dishes of most Ethiopians. This importance necessitated the growth and production of many of the root crops throughout the year often via the use of irrigation. Root crops are also a good source of cash and foreign exchange for the growers and the country, respectively. In 2001/02 (1994 E.C), the country has acquired a sum of 22,423,972

million Birr by exporting 120,497 quintals of root crops (CSA, external trade statistics). The economic and nutritional importance of root crops has been a factor for practicing the agriculture in all the regions and growing the crops more than one time in a year.

Summary Tables V-1 and V-2 indicate the root crop situation in Amhara Region. As these tables show, root crops covered small area and yielded a tenth of the volume of temporary crop production in the region. Potatoes, onion and garlic constituted 90.16%, 6.05%, and 3.14% of the regional area under root crops, respectively. The same crops formed 67.88%, 24.59%, and 6.75% of the volume of root crop production in the region, in that order.

In North Gonder Zone, potatoes, garlic and onion were planted to 78.62 %, 13.69 % and 6.79 % of the root crop area resulting in 71.88 %, 18.27 % and 9.28 % of the root crop production, respectively, as shown in Summary Tables V-3 and V-4.

In South Gonder Zone, potatoes covered 96.27 % of the area under root crops and 70.22 % of the production, as presented in Summary Tables V-5 and V-6.

In North Wollo Zone, as Summary Tables V-7 and V-8 indicate, garlic onion and potatoes shared 38.48 %, 36.13 % and 24.21 % of the root crop area and garlic and potatoes contributed 38.29 % and 14.23 % of the root crop production, respectively.

Summary Tables V-9 and V-10 show that 38.08 %, 29.76 % and 18.69 % of the root crop area were under garlic, potatoes and onion and the same crops contributed 56.70 %, 17.24 % and 15.71 % of the root crop production, in that order.

In North Shewa Zone, as Summary Tables V-11 and V-12 show, onion, garlic, and potatoes added 74.82 %, 14.04 % and 7.90 % of the area under root crops to the zonal total and the same crops contributed 75.53 %, 16.18 %, and 5.66 % of the root crop production to the zonal total, in the same order.

In East Gojam Zone, potatoes and onion covered 95.83 % and 3.07 % of the area under root crops and 63.72 % and 32.11 % of the production, respectively, as shown in Summary Tables V-13 and V-14.

In West Gojam Zone, as Summary Tables V-15 and V-16 show, potatoes, onion, and garlic shared 94.12 %, 3.00 %, and 2.28 % of the root crop area and 84.79 %, 5.89 % and 8.21 % of the production, in that order.

In Waghamra Zone, as Summary Tables V-17 and V-18 show, garlic and potatoes covered 46.83 % and 19.29 % of the root crop area and 54.47 % and 15.70 % of the production, in the same order.

In Awi Zone, as shown in Summary Tables V-19 and V-20, potatoes and onion took up 96.42% and 2.71% of the root crop area and 94.43% and 3.49% of the production, respectively.

In Oromia Zone, as shown in Summary Table V-21 onion and sweet potatoes were planted to 83.74 %, and 5.16 % of the root crop area, respectively. /For distribution of temporary crop area and production by zone and crop category see figures V-1, V-2 and V-3. /

SUMMARY TABLE V-1 AREA UNDER TEMPORARY CROPS BY CROP TYPE
FOR PRIVATE PEASANT HOLDINGS

Amhara Region

Crop	All		Rural		Urban
			Area (HA)		Area (HA)
	Area (HA)	%	Meher	Belg	Meher
All	3,159,027.70		2,913,588.60	223,046.08	22,393.03
Grain Crops	3,061,006.65	100.00	2,880,425.12	158,593.62	21,987.91
Cereals	2,350,341.66	76.78	2,216,029.07	117,340.64	16,971.95
Teff	796,635.09	26.03	778,202.03	13,177.63	5,255.43
Barley	347,672.52	11.36	274,628.32	71,446.45	1,597.75
Wheat	300,791.36	9.83	286,246.58	12,683.04	1,861.74
Maize	313,548.09	10.24	296,356.11	15,100.91	2,091.07
Sorghum	415,223.50	13.56	409,473.20	563.34	5,186.96
Finger Millet	156,462.06	5.11	155,526.83	99.26	835.97
Oats / “Aja”	13,354.82	0.44	8,996.12	4,270.00	88.70
Rice	6,654.21	0.22	6,599.88	-	54.33
Pulses	531,665.80	17.37	488,183.62	40,903.29	2,578.89
Horse beans	170,124.14	5.56	168,944.71	201.45	977.98
Field peas	87,192.41	2.85	78,144.77	8,741.56	306.08
Haricot beans	29,983.88	0.98	22,518.39	7,429.95	35.53
Chick – peas	118,448.93	3.87	109,431.99	8,544.22	472.72
Lentils	54,046.57	1.77	40,120.86	13,605.16	320.55
Vetch	55,551.86	1.81	53,966.46	1,207.88	377.52
Soya beans	256.75	-	250.80	*	*

3. PRODUCTION OF PERMANENT CROPS

Permanent crops are long term crops that occupy the field planted for a long period of time and largely harvested every year and do not have to be replanted for several years after each harvest. These include tree crops such as coffee, Enset, Chat, oranges, mangoes, bananas, papayas, avocados… etc. The trees that yield fruits like oranges; mangoes, papayas, apples and others are also known as fruit trees.

Permanent crops are a good source of cash both for the holders and the country generating handsome income and foreign exchange at the best of times. For instance, between September 2001 and August 2002 Ethiopia exported 53,142 quintals of fruits and nuts and 91,705 quintals of Chat valued at 16.5 and 426.7 million Birr, respectively, (CSA, external trade statistics). With these bits of information and the dietary and economic importance of the crops in mind, it is not difficult to project the profits that can be reaped from the permanent crops if the farming in this regard is well developed and managed.

Fruits are not only a source of cash but are also a reliable source of nutrition that is essential for the health and growth of humans. There has even been an oft-repeated advice from health authorities that we should include fruits in our daily meals to make it nutritious. The two points made on the importance of permanent crops underscore the fact that fruit farming should be encouraged and expanded to have a steady supply of the desired products.

It is possible to conjecture that permanent crops in Ethiopia are not as well developed as they are in other countries. But the potential to develop them is great as Ethiopia is blessed with diverse climate conducive to the crops. In order to direct efforts towards the development of permanent crops, one requires statistical data regarding this sector of the agriculture. Adequate data on type and volume of production, area under permanent crops and their distribution have not been available. Hence, to bridge up this gap and alleviate the chagrin to data users the CSA has collected data on permanent crops.

Prior to the census, the CSA surveyed the situation about permanent crops in the country and then decided on the types of permanent crops, range of data items and method of enumeration to be included in the census. Hence, only major permanent crops were covered during the census. Data

on the types of crops were collected by holder interview while area and yield data were recorded by objective measurements. The numbers of Enset, Hops (Gesho) and fruit trees with the exception of pineapple were determined by counting the plants excluding seedlings.

In estimating the production of permanent crops, area, yield per unit area, yield per tree and number of fruit bearing trees are essential ingredients. These inputs were determined by physically measuring the area under crops in question, picking fruits, coffee berries and Chat produce from randomly demarcated plots or selected trees. The method involved crop cutting from small plots of rectangular shape of different sizes randomly placed in the selected crop field and a tree of fruit bearing age selected from all fruit bearing trees for each crop type and subsequent husking, drying, weighing and recording the weight of the harvest of permanent crops. The crop cutting was performed for a sub sample of 20 households of the 30 households selected in each enumeration area. A 4m X 4m plot was demarcated for coffee and Chat and a 2m X 2m for pineapple and 1m X 1m plot for sugar cane were designated for the crop cutting exercise. The yields harvested from these plots and trees were immediately weighed (green weight) and/or weighed again after two weeks of drying to conform to the normal holder harvesting and drying practices. The coffee weight registered was that of clean coffee beans and the hops (Gesho) weight taken was that of the dry one. The green and dry weights were recorded on the appropriate forms.

For simplicity of description of the statistical tables and comparison purposes permanent crops have been grouped into three categories. Each category has a semblance of similarity, which necessitated the categorization. The categories are fruit crops, stimulant crops and other permanent crops. These categories include only permanent crops on which yield data have been collected.

3.1. Fruit Crops

Various kinds of fruit crops grow in different regions of the country yielding varying quantities of fruits within the private peasant holdings in the traditional way. There are also a few fruit farms that are run by enterprises in the modern way. The volume of fruit production obtained from the peasant farms is small signaling the absence of development in fruit farming. A look at the tables helps to crystallize this point.

As Summary Table V-23 shows more than twenty-one thousand hectares of land is under permanent crops in the region. Fruit crops constituted less than a tenth of the permanent crop area yielding about 18.4 thousand quintals of fruits. Bananas, oranges and papayas shared 31.90%, 25.60% and 13.75% of the fruit crop area and 23.37%, 43.66% and 16.10% of the fruit production, in that order.

Summary Tables V-24 – V-33 and Figures V-4 – V-6 present the census result on area and production of permanent crops at zonal level for the Amhara Region. In North Gonder Zone, as Summary Table V-24 shows, more than half of the fruit crop area is under bananas and 21.14% and 14.90% were under lemons and papayas, respectively. Out of the fruit production in the zone, 51.00%, 42.28% and 6.27% were that of bananas, papayas and lemons, in the same order.

In South Gonder Zone, 49.93% and 16.91% of the fruit crop area were under bananas and lemons, respectively. The bananas yielded 21.25% of the fruit production as indicated in Summary Table V-25.

In North Wolo Zone, oranges, bananas, guavas, and papayas covered 33.88%, 32.47%, 19.16%, and 11.86% of the area under fruit crops, respectively. Oranges, bananas, and papayas yielded 38.28%, 13.09%, and 11.73% of the fruit production as indicated in Summary Table V-26.

In South Wolo Zone, as Summary Table V-27 shows, 47.67%, 21.07%, 15.10%, and 10.82% of the fruit crop area were under oranges, bananas, guavas, and papayas, respectively. The production obtained from these crops was 69.27%, 14.08%, 7.01% and 8.40% of the zonal fruit total, in the same order.

In North Shewa Zone, bananas, oranges, lemons, and papayas took up 44.67%, 21.68%, 14.66% and 11.05% of the fruit crop area and 38.43%, 33.69%, 9.45%, and 16.75% of the fruit production, in that order, as indicated in Summary Table V-28.

Summary Table V-29 shows that 55.34%, 29.13%, and 10.20% of the fruit crop area, in East Gojam Zone, were under bananas, oranges, and lemons, respectively, and 81.22% of the fruit production was that of bananas.

In West Gojam Zone, as Summary Table V-30 indicates, lemons, bananas and papayas shared 29.51%, 27.53% and 16.20% of the fruit crop area and 20.72%, 28.81% and 30.65% of the production, respectively.

In Waghamera Zone, more than half of he fruit crop area was under bananas and 6.13% under lemons as indicated in Summary Table V-31. Lemons yielded 10.36% of the fruit production in the zone.

In Awi Zone, as shown in Summary Table V-32, bananas, papayas, lemons, and mangoes covered, 23.77%, 9.24%, 8.96%, and 8.24% of the fruit crop area, respectively. The production obtained from papayas was 43.18% of the zonal fruit total.

In Oromia Zone, papayas, guavas, and bananas added 27.53%, 24.46%, and 17.90% of the fruit crop area and 26.81%, 30.14%, and 18.68% of the production to the zonal fruit crop area and production, respectively, as shown in Summary Table V-33.

3.2. Stimulant Crops

This category embraces cash crops like coffee and Chat, which are extensively grown in many parts of the country. It is needless work to verify by quoting statistical evidences that coffee is a major foreign exchange earner. It may not be even surprising to hear that Chat farming is becoming a rapidly expanding phenomenon in Ethiopia because of its economic importance. As the census covered a wide range of crops, the statistics on Chat would perhaps be more tantalizing than the others. Summary Table V-23 shows the situation in which Chat, coffee, and hops (Gesho) are found in Amhara Region.

The data in the summary table demonstrate, that most of the regional permanent crop area (about nineteen thousand hectares of land) is under stimulant crops. Of the total area under stimulant crops in the region, 55.76% is that of hops (Gesho) resulting in 70.92% of the volume of stimulant crop production. About 33.5% and 10.74% of the regional stimulant crop area were that of coffee and Chat resulting in 16.55% and 12.53% of the volume of production, respectively.

In North Gonder Zone, more than two thousand hectares of land was under stimulant crops and 77.49% and 21.73% of it were under hops (Gesho) and coffee, respectively, as shown in Summary Table V-24. The volumes of hops and coffee production were 85.43% and 14.41% of the stimulant crop production, respectively.

In South Gonder Zone, as Summary Table V-25 shows, hops (Gesho) and coffee covered 83.35% and 14.28% of the stimulant crop area and 94.96% and 4.37% of the production, respectively.

In North wolo Zone, as indicated in Summary Table V-26, more than one thousand hectares of land was under stimulant crops 49.33%, and 45.88% of which went for hops and coffee, respectively. The production of these crops was 66.09% and 33.74% of the stimulant total in the zone, in the same order.

In South Wolo Zone, coffee, Chat and hops shared 46.6%, 38.05% and 15.35% of the stimulant crop area and 28.10%, 42.23% and 29.67% of the production, respectively as shown in Summary Table V-27.

In North Shewa Zone, as Summary Table V-28 shows, hops and coffee contributed 67.67% and 29.89% of the stimulant crop area and 93.13% and 6.85% of the production to the zonal total of stimulant crops, respectively.

In East Gojam Zone, as shown in Summary Table V-29, hops and coffee added 92.81% and 5.76% of the area under stimulant crops and 98.16% and 1.59% of the production to the zonal total, respectively.

In West Gojam Zone, as shown in Summary Table V-30, hops and coffee took up 50.51% and 45.70% of the stimulant crop area and 82.71% and 15.85% of the production, respectively.

In Waghamera Zone, as Summary Table V-31 indicates, more than half of the permanent crop area was under stimulant crops 78.23% of which went for hops.

In Awi Zone, as Summary Table V-32shows, hops and coffee contributed 50.26% and 48.36% of the stimulant crop area and 66.43% and 33.03% of the production to the zonal total.

In Oromia Zone, as shown in Summary Table V-33, Chat and coffee shared 50.71% and 47.71% of the stimulant crop area and 41.92% and 54.71% of the production, respectively.

3.3. Other Permanent Crops

This group includes Enset and sugar cane on which yield data have been collected. Enset is a principal staple crop extensively grown in S.N.N.P and Oromiya Regions. The growers draw a substantial amount of money from the sale of Enset products. Though, sugar cane is an industrial crop it looks that it is not widely grown by the private peasant holders, as the statistics seem to indicate. It is produced on a small scale by private peasant holders in some pockets of the country and usually does not end up in sugar cane processing plants. The sugar factories in Ethiopia run extensive sugar cane plantations. As the statistics indicate 660,146 quintals of sugar worth 111,773,918 Birr was exported between September 2001 and August 2002 (CSA, external trade statistics).

The data in Summary Table V-23 seem to indicate that peasant farmers do not commonly grow Enset in Amhara Region. But there is an indication that the private peasant holders are cultivating some sugar cane farms. A little more than one thousand hectares of land was under sugar cane yielding more than nine thousand quintals of the same crop. There is not much information on sugar cane area and production for the zones as indicated in Summary Tables V-23-V-33. /For distribution of permanent crop area and production by zone and crop category see figures V-4, V-5 and V-6/.

4. CROP UTILIZATION

Agriculture is the livelihood of the overwhelming majority of Ethiopians. It is the source of food and cash for those who are engaged in it and others. Most agricultural holders acquire the food they eat and the cash they need to cover other expenses only from farming activities. Since farming in Ethiopia is often precarious and usually at the mercy of nature, it is invariably an arduous struggle for the holders to make ends meet. This, it often transpires, is true to the frequent shortfalls in the volume of production that occur in the country.

It is often said that what most Ethiopian agricultural holders produce is only enough to live, hand to mouth. This would be better said if it was statistically substantiated. There is plenty of information on the volume of crops produced within the private peasant holdings. But there is hardly any information on how the peasants utilize the crops they produce which will be indicative of the fact whether the holders have enough or little to sell in order to meet other expenses of living. For use in the census taking, crop utilization was defined as the amount of agricultural produce used for own consumption, sale, seed, and wages in kind, animal feed and other purposes.

In light of this information gap, the CSA has collected some data on how holders use their agricultural produce in the agricultural year to provide some information on the subject. The data were collected by interviewing the holders. They were asked to quantify their yearly crop utilization experience in percent based on common practice. Summary Tables V-34 – V-44 convey this information to shed some light on how holders utilize their crop produce. Information was sought for each crop type produced during the census year. The resulting data may help users to have some idea about crop usages by agricultural holders. In order to detect the differences in utilization of the various crops, it is better to look into the data by group of crops as categorized in the summary tables for simplicity and analogy.

Needless to say, as Summary Table V-34 points out, most of the cereal crops produced were used for household consumption. In Amhara Region more than 68 % of the cereals produced were used for household consumption. About 13% was used for sale and 13% for seed. The remaining 6% of the cereals produced was used for other purposes like wages, animal feed, etc. When the utilization is considered by crop type, it is easy to realize that between 61% and 78 % of the crops in the cereals group were used for own consumption and between 6 % and 21% of these crops were used

for sale. Moreover, between 8% and 20% of the same crops in the same group were used for seed. The zonal tables (Tables V-35-V-44) show similar pattern of cerealcrop utilization to that of the region.

The pattern of utilization of pulses isn't much different either. As shown in Summary Table V-34 more than 61% of pulses were used for household consumption, about 16% for seed and 19% for sale. The remaining 4% of pulses were used for wages, animal feed and others. Considering utilization by crop type within the pulses group, between 21% and 68% of the crops were utilized for household consumption and 11% - 59% of the same crops in the same group were sold in 2001/02 (1994 E.C.). Moreover, between 12% and 37% of these crops in the pulses group were also used for seed in the same year. The distribution of pulse utilization by zone is shown in Tables V-35-V-44 and is more or less the same as the region.

The pattern of oilseeds utilization is distinctly different from that of cereals and pulses as portrayed in Summary Table V-34. About 49%, 40% and 8 % were used for sale, household consumption and seed, respectively. Taking utilization by crop type into account, between 6% and 64% of each crop type in the oilseeds category were used for household consumption, between 22% and 78% for sale and 1-13% for seed. It may reasonably be summed up that more of the oilseeds produced are used for sale or as cash crops. Many of the zones show the same picture as the region and in some zones more of the oilseeds is consumed at home as indicated in Summary Tables V-35-V-44.

The percentage of vegetables consumed at home is even more than that of cereals and pulses. More than 75% and 20% of the vegetables produced were used for household consumption and sale, respectively. The remaining 5% were used for seed, wages, animal feed and others. The percent used by crop type with in the vegetables group were 23% - 93% for household consumption, 5% - 63% for sale. For details, see Summary Table V-34. The zonal pattern of vegetable utilization is found out to be about the same as the regional one as demonstrated in Summary Tables V-35-V-44.

The utilization of root crop production is not different from the other crops as indicated in the regional Summary Table V-34. More than 62% of the root crops were used for household consumption, 21% for sale and about 14% for seed. The ranges of percent utilized by crop type within the root crops category fall between 28% - 70% for consumption, 11% - 68% for sale and 1%

-17 % for seed. Summary Tables V-35-V-44 show that root crop utilization in the zones is not different from that of the region.

The permanent crop utilization isn't much different from that of cereals, pulses and vegetables. Thus, more than 58% of the crop was used for consumption at home and about 38% for sale. The utilization by crop type within the permanent crop group ranges between 17% and 66% for household consumption and between 29% and 100% for sale. Permanent crop utilization by zone is largely similar to the regional pattern as shown in Summary Tables V-35- V-44. In general, it is rational to conclude by looking at Summary Table V.16 that the peasant farmers consume most of what they produce leaving little to sell. (For overall utilization by purpose see figure V-7).
