FOREWORD

At the end of the 2014/15 Agricultural year, the National Bureau of Statistics (NBS) in collaboration with the Ministry of Agriculture, Livestock and Fisheries, Ministry Industry, Trade and Investment; the President's Office, Regional Administration and Local Government (PO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministry of Agriculture and Natural Resources Zanzibar; Ministry of Livestock and Fisheries Zanzibar; conducted the Annual Agricultural Sample Survey (AASS) .

The survey collected detailed information on area and production for major crops, potentially livestock and fish farming. This is the first survey of its kind conducted in Tanzania using Point Sample Area Frame Methodology, therefore it limits the comparisons with the previous agriculture censuses and surveys data due to different methodologies applied.

The extensive nature of the survey in relation to its scope and coverage is a result of the increasing demand for more timely, accurate estimates of area and production for major crops, livestock and fish farming.

It is expected that, the survey report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural operators in the country.

On behalf of the Government of Tanzania, We wish to express our sincere appreciation for both financial and technical support provided by the United States Agency for International Development (USAID) and United States Department of Agriculture (USDA).

My appreciation also goes to all those who in one-way or the other have contributed to the success of the survey. In particular, we would also like to mention the enormous effort made by the Planning Group composed of professionals from the National Bureau of Statistics-Department of Agriculture Statistics, Ministry of Agriculture, Livestock and Fisheries; Ministry of Industries, Trade and Investment; the President's Office, Regional Administration and Local Government; the Office of the Chief Government Statistician, Zanzibar, Ministry of Agriculture and Natural Resources Zanzibar; and Ministry of Livestock and Fisheries; Zanzibar.

I would like also to extend my sincere gratitude to all regional and district officials who worked tirelessly with the National Bureau of Statistics for their support of ensuring smooth data collection in their respective regions and district.

Finally, I would like to extend our sincere gratitude to all supervisors, interviewers and respondents for their commendable work, to ensure that the data collected was of good quality.

Dr. Albina Chuwa
Director General
National Bureau of Statistics

SUMMARY OF FINDINGS

This section presents the summary of results for the 2014-15 Annual Agricultural Sample Survey. The summary focuses only on the major crops which have been identified under the initiative of the Global Strategy to Improve Agriculture and Rural Statistics. These crops include maize, paddy, sorghum, wheat, bulrush millet, finger millet, soybeans, cotton and, tobacco. In addition, a brief summary of operators and farm characteristics is also given.

Number of Operators

A total of 11,287,822 operators engaged in agriculture during 2014/15 annual agriculture sample survey was sampled, of which 11,095,830 (98 percent) were in the Mainland and 191,992 (2 percent) were in Zanzibar. During the survey, 6,775,681 (60 percent) operators were growing crops only, 4,236,672 (38 percent) were engaged in crop and livestock and those who kept livestock only were 275,469 (2 percent).

The regions with high number of operators were Mwanza (862,556), Tabora (722,337), Mbeya (702,127), Lindi (651,058), Kigoma (662,653), Kagera (591,215), Dodoma (533,786), and Shinyanga (530,370). Dar es Salaam region had the least number of operators (21,855) engaged in agriculture.

Number of Operators Practicing Irrigation and Total Irrigated Area

In total, there were 440,352 operators practicing irrigation, with 252,131operators in short rainy season and 188,221 long rainy seasons. In Tanzania Mainland there were 424,584 operators (96 percent) and Zanzibar 15,768 operators (4 percent). The total irrigated area was 331,364 ha, out of which 325,276 ha (98 percent) was in Tanzania Mainland and 12,908 ha (2 percent) in Zanzibar.

Area Planted

During the 2014/15 Agricultural year, the total area planted with crops was 17,255,084 ha whereby 11,575,767 ha (67 percent) was planted during long rainy season and 5,679,320 ha (33 percent) was planted during the short rainy season. For the major crops the total area planted were 11,039, 925 ha, out of which 3,675,107 ha were planted during the short rainy season and 7,364,818 ha during long rainy season.

Maize

Maize was a dominant crop planted in a total area of 7,319,629 ha (42 percent of the total planted area with annual crops) in both seasons. During the short rainy season, the area planted with maize was 2,507,532ha (34 percent) and 4,812,097 ha (66 percent) in the long rainy season. The total production of maize was 7,763,853 tons and the average yield was 1.2 tons/ha. Kigoma region had the highest production of maize (371,945 tons) during the short rainy season, while Mbeya region recorded the highest maize productions (536,541 tons) in the long rainy season. The number of operators was 8,839,276 growing maize in 2014/15 agriculture year.

Paddy

The total area planted with paddy was 1,525,458 ha (8.8 percent of total area planted with annual crops) of which 452,260 ha (29.6 percent) were planted during the short rainy season and 1,073,198 ha (70.4 percent) planted in the long rainy season. The number of operators growing paddy was 1,768,708 in both seasons. Geita region had the highest production of paddy in both seasons (short and long rain season) compared to other regions (327,439 tons and 399,051 tons respectively).

Sorghum

Sorghum is among of the cereal crop that was planted in both seasons during 2014/2015 agriculture year. The area planted with sorghum was 781,025 ha of which 187,415 ha were planted during the short rainy season and 593,610 ha in the long rainy season. Nationwide, the production of sorghum was 531,206 tons. Mara region had the highest production of sorghum (62,674 tons) during short rainy season compared to other regions. For the case of long rainy season, the highest production was in Dodoma regions (81,573 tons).

Cotton

Cotton had a total planted area of 442,794 ha with 91,994 ha in short rainy season and 350,800 in a long rainy season. A total of 525,065 tons were harvested with 130,496 in short rainy season and 394,569 in a long rainy season. Cotton had a yield of 1.5 in a short rainy season and 1.3 in long rainy season. Regional wise, Geita had the largest planted area in short rainy season (30,247 ha) and Simiyu in the long rainy season (203,451 ha). Geita accounted for the largest quantity harvested for cotton in a short rainy season (60,271 tons) and Shinyanga in the long rainy season (192,416 tons).

Tobacco

Tobacco had a total planted area of 111,627 ha with 64,971 ha in short rainy season and 46,656 in a long rainy season. A total of 166,985 tons were harvested with 111,386 tons in short rainy season and 55,599 tons in a long rainy season. Tabora had the largest quantity of tobacco harvested in both short and long rainy seasons (62,074 tons and 36,534 tons respectively).

Beans

Beans had a total planted area of 541,569 ha with 335,269 ha in short rainy season and 206,300 ha, in a long rainy season. A total of 394,067 tons were harvested with 280,017 tons in short rainy season and 114,050 tons in a long rainy season. Regional wise, Kigoma had the largest planted area in short rainy season (110,897 ha) and Tanga in the long rainy season (52,612 ha). On the other hand, Tanga region accounted for the largest quantity harvested for beans in a short rainy season (26,120 tons) and Kigoma in the long rainy season (92,527 tons).

Bulrush millet

The total area planted with bulrush millet was 179,005 ha for both long and short rainy season. The crop was mainly grown in the long rainy season in most regions and in very few regions during the short rainy season. During the short rainy, Tabora was the only region with a very large number of operators growing bulrush millet (22,823 operators, 61 percent). The remaining 39 percent of the growing operators in the Mainland were in Kigoma, Mwanza and Geita regions, which all together produced 5,537 tons during the short rainy season.

In the long rainy season, bulrush millet was mainly grown in five regions, namely Dodoma, Singida, Mara, Mbeya and Shinyanga. Dodoma region was leading with 99,648 operators equivalent to 54 percent of all operators reported in the season; with the largest planted area of 75,746 ha and the largest quantity harvested (16,240 tons), followed by Singida (8,888 tons). Mara region was third overall with respect to number of operators. However, bulrush millet productivity in this region was the highest at 1.0 tons/ha during the long rain season compared to the rest of the regions. The total production of bulrush millet in this season was 72, 025 tons recorded for the whole country.

Finger millet

Half of the regions in Tanzania Mainland reported to have grown finger millet during long rainy season as compared to short rainy season. Finger millet had a total of 80,381 ha planted for both seasons of which of 14,724 ha (18 percent) planted during short rainy season and 65,657 ha (82 percent) planted during long rainy season. The total production of finger millet was 55,660 tons and the average yield was 0.7 tons/ha. Four regions had more than ten thousand operators planted finger millet with Mbeya region having 19,320 operators (21 percent of all operators reached in the country) during the long rainy and six regions have a thousand operators planted the same crop.

Finger millet was most popular in Mara region with 17,540 operators, (54 percent of the total operators reported in the country) and had the largest quantity harvested (5,925 tons) during short rainy season, however it recorded none in the long rainy season. For the long rainy season, Mbeya region had the highest number of operators (19,320) and production of finger millet was (10,956 tons). In Zanzibar, the crop was only grown in two regions, Kaskazini Pemba and Kusini Pemba (11 tons and 80 tons, respectively).

Wheat

Wheat production was only reported for Arusha and Kilimanjaro regions in the short rainy season with total number of operators being 1,647. Large number of operators was reported during long rainy season in Njombe (18,320), Iringa (4,754), Arusha (3,642), Manyara (948) and Ruvuma region (796). Other regions involved in wheat cultivation during long rainy season were Simiyu, Tanga and Kilimanjaro. Wheat had a total planted area of 58,437 ha for both seasons, whereby 5,632 ha (9.6 percent) and 52,437 ha (90.4 percent) planted in short and long rainy season respectively. The total production of wheat was 51,621 tons and the average yield was 1.0 tons/ha. The highest productivity of wheat region was in Simiyu (2.0 tons/ha) followed by Arusha (1.1 tons/ha) in long rainy season. All other regions including Njombe with the largest number of operators had less than one ton/ha.

CHAPTER ONE

Introduction

1.0 Background Information

In response to many challenges of meeting user needs for agricultural statistics in developing countries, a Global Strategy for Improving Agricultural and Rural Statistics was introduced and endorsed in February 2010 by the United Nations Statistical Commission (UNSC). The purpose of the Global Strategy is to provide a framework and methodology that will help improve the availability and quality of national and international food and agricultural statistics, to guide policy analysis and decision making in the 21st century. The Global Strategy is based on three pillars, namely:

i. The establishment of a minimum set of core data that countries will provide to meet their current and emerging demands;
ii. The integration of agriculture into their national statistical systems (NSSs) to ensure that the data will be comparable across countries and over time;
iii. Ensuring the sustainability of the National Agricultural Statistical System (NASS) through governance and statistical capacity building.

In the framework of the implementation of the *Global Strategy to Improve Agricultural and Rural Statistics*, the Government of Tanzania in collaboration with the Food and Agriculture Organization of the United Nations (FAO), United States Department of Agriculture (USDA) and African Development Bank (AfDB) initiated the process of improving the agricultural statistics system of the country through Strengthening Agricultural Statistics Program. The main aim of the program is to:

i. Develop sampling frames and sample designs appropriate for generating agricultural statistics;
ii. Design and implement an annual agricultural survey;
iii. Capacity development through upgrading skills on national staff.

1.1 Survey Objectives

The purpose of the Annual Agricultural Sample Survey is to provide more timely and accurate estimates of area and production for major crops and livestock in the URT regions. The size of the crops and numbers of animals are crucial information needed by many people involved in agriculture. Estimates derived from this survey will supply basic information needed by farmers, agribusinesses and government policy makers to make decisions for both short term and long-range planning.

The overall objectives of AASS are:

a) To obtain basic data to be utilized in the preparation, formulation of policies and implementation of agricultural plans at national and regional levels in between the agricultural census years;
b) To obtain time series data on agricultural production & productivity at national and regional levels; and
c) To obtain basic statistics for comparison on the development of the agriculture sector in the country.

1.2 Survey Coverage

At the onset of planning for the implementation of the 2014/15 AASS, a need for a reliable sampling frame was identified as information on farm operators were not readily available for consistent monitoring or sampling. The point sample area frame provided a quicker and easier way to select a statistically sound sample of farm operators than the household-based sampling methods currently used. A total of 21,210 sample points were selected. Of the 21,210 sample points, 15,281 points were completed for a 72% response rate.

1.3 Survey Scope

The survey covered both large scale and household farming in detail and was conducted using a well-structured questionnaire. The main topics covered were:

i. Farm Ownership;
ii. Land Tenure;
iii. Crop Production;
iv. Crop Prices;
v. Livestock Population; and
vi. Fish Production.

1.4 Survey Methodology

The main focus at all stages of the survey execution was on data quality. The main activities undertaken include:

a) Survey Organization;
b) Tabulation Plan Preparation;
c) Design of Survey Questionnaire and Other Instruments;
d) Training of Trainers, Supervisors, and Enumerators;
e) Data Collection;
f) Field Supervision and Consistency Checks;
g) Data Processing;
h) Manual Data Entry Application; and
i) Tabulation Preparation.

1.4.1 Survey Organization

The survey was carried out by the National Bureau of Statistics (NBS), Office of the Chief Government Statistician (OCGS), and in collaboration with the ministries responsible for agricultural activities. At the National level, the implementation of the survey was headed by the National Bureau of Statistics.

The National Team had the responsibility of overseeing the operational aspects of the survey and the team was comprised of staff from the Department of Agricultural Statistics, in the NBS, staff from the Department of Agricultural Statistics, in the OCGS and representatives from the Ministry of Agriculture, Food Security and Cooperatives (MAFC), and Ministry of Livestock and Fisheries Development (MLFD). At the regional level, the implementations of the survey activities were supervised by the Regional Statistical Officers of NBS, OCGS, and the Regional Agricultural Statistics Supervisors from the Ministry of Agriculture, Food Security and Co-operatives.

1.4.2 Tabulation Plan Preparation

The tabulation plan was developed following a National Team meeting which discussed the information and data needs of the end users. It also considered the tabulations from other agricultural surveys to allow trend analysis and comparisons.

1.4.3 Questionnaire Design and Other Instruments

The questionnaire was structured to focus on crop production and livestock inventory only. Several features were included into the design of the questionnaire to improve the quality of data collection during field work data collection. Among others, the features included:

i. Where feasible, all variables were extensively coded to reduce post enumeration coding errors;
ii. Skip patterns were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent; and
iii. Each section was clearly numbered to facilitate the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS.

1.4.4 Training of Trainers/Supervisors and Enumerators

The training was organized for field work supervisors and enumerators. The focus of the training was on survey methodology and definitions. During the training of enumerators and supervisors, the issue of consistency checks in order to enhance the quality of the data was also emphasized. The trainers were members of the National Team all of whom came from the National Bureau of Statistics, Office of the Chief Government Statistician, and Agriculture Lead Ministries.

1.4.5 Information, Education and Communication (IEC) Campaign

Communication was made to the regional administrative offices and district administrative offices, so as to prepare staff for the upcoming survey. They were also requested to inform and sensitize the public as well as the village chairpersons.

1.4.6 Data Collection

Data collection activities for the Survey took one month to complete from February to March, 2016. The only method used for data collection was face to face interview. Field work was monitored through a hierarchical system of supervisors at the top of which was the National Team, followed by the regional supervisors and enumerator team supervisors. The National Team included two senior supervisors who were responsible for overall direction of field operations and responded to queries raised outside the scope of the training exercise.

1.4.7 Field Supervision and Consistency Checks

The enumerators were trained on how to probe the respondents, so as to get reliable responses and finally record them correctly in the questionnaire. The first check of the questionnaire was done by enumerators in the field, while the second check was done by enumerator team supervisors, followed by regional and national supervisors during the supervision period. Supervisory visits at all levels of supervision, focused on consistency checks of the questionnaires. Inconsistencies encountered were corrected, and where necessary, a return visit to the respondent was made by the enumerator to correct the information. Further quality control checks were made through a major post enumeration checking exercise where all questionnaires were checked for consistencies by editing staff in the National office.

1.4.8 Data Processing

Data processing consisted of the following activities:

i. Data entry;
ii. Data structure formatting;
iii. Batch validation; and
iv. Tabulation.

1.4.8.1 Data Entry

All data were entered manually using CSPro by a staff hired specifically for editing and data entry. Prior to data entry, all questionnaires were cleaned manually to maintain the quality of the data. This involved checking to see if the questionnaire was complete, had correct identifications and correctly filled in information.

1.4.8.2 Tabulation

Subsequent to data entry, tables were prepared based on a predesigned tabulation plan. Statistical Package for Social Sciences (SPSS) was used to produce the survey tables and Microsoft Excel was used to organize tables.

1.4.8.3 Analysis and Report Preparation

The analysis in this report focuses on regional comparisons and national production estimates. As this is the first survey of its kind conducted in Tanzania, time series data is not available. In the future, as additional survey cycles are completed time series and comparison between survey cycles will be available. Microsoft Excel was used to produce tables; whereas Microsoft Word was used to compile the report in general.

1.4.8.4 Data Quality

The data quality was kept in mind throughout the entire exercise, from planning, questionnaire design, training, supervision, data entry, validation and data cleaning/editing. As a result of this process, it is believed that the survey data presented in this report are sufficiently accurate and representative of what was collected from the field.

1.5 Funding Arrangements

The survey was financially supported by the United States Agency for International Development (USAID), Government of Tanzania and Ministry of Agriculture, Livestock and Fisheries.

CHAPTER TWO

Crop Production

2 Crop Result Tables

The crop result tables are from the 2014/2015 Annual Agricultural Sample Survey in Tanzania Mainland and Zanzibar. The tables are presented in tabular format which include both Tanzania Mainland and Zanzibar. Where allowed a National total is also presented. The National total is a combination of Tanzania Mainland and Zanzibar. As this is the first survey of its kind, comparisons between previous results are not available. In the future, as additional surveys are conducted, comparisons will be readily available.

Presentation of results is divided into four main sections which are operator and farm characteristics, short rainy season, long rainy season, and permanent crops. The main sections are described as follows:

- **Operator and Farm Characteristics:** An operator refers to an individual that makes the day to day decisions for farming operations. Farm characteristics refers to farm size, land tenure and type of agriculture operation.
- **Short Rainy Season:** The short rainy season in Tanzania begins in October up to January of the following year
- **Long Rainy Season:** The long rainy season in Tanzania begins in February up to May of the same year
- **Permanent Crops:** Crops which are produced from plants which last for many seasons, rather than being replanted after each harvest.

OPERATORS AND FARM CHARACTERISTICS

For the 2014/15 annual agriculture sample survey, an operator refer to an individual that makes the day to day decisions for farming operations,

Farm characteristics refers to farm size, land tenure and type of agriculture operation.

A total of 11,287,822 operators engaged in agriculture during 2014/15 annual agriculture sample survey, of which 11,095,830 (98 percent) were in the Mainland and 191,992 (2 percent) were in Zanzibar. During the survey, 6,775,681 (60 percent) operators were growing crops only, 4,236,672 (38 percent) crop and livestock and those who kept livestock only were 275,469 (2 percent). (Table 1)

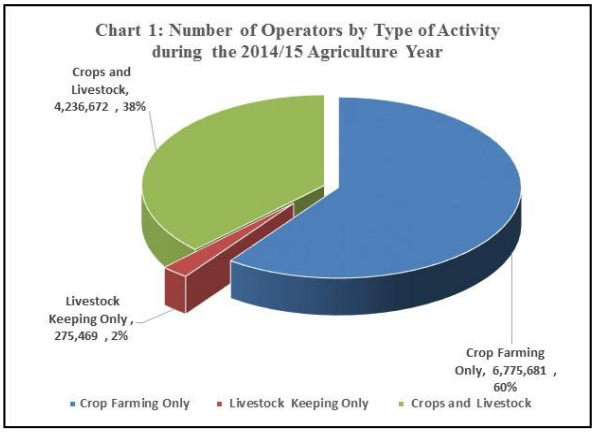

Table 1: Number of operators engaged in crop farming, livestock keeping, or both crop and livestock farming by Region during the 2014/15 Agriculture year

Region	Crop Farming Only	Livestock Keeping Only	Crops and Livestock	Crop Farming %	Livestock Keeping %	Crops and Livestock %
Dodoma	243,735	22,151	267,900	45.66	4.15	50.19
Arusha	60,917	30,489	128,706	27.68	13.85	58.47

SHORT RAINY SEASON

Tanzania experiences two types of rainy seasons, the short and long rainy season. Short rain season begin months of October through January of following year while long rainy season begin months of February through May, same year.

During the 2014/15 agriculture year, main cereal crops grown during the short rainy season included maize, paddy, sorghum, bulrush millet, finger millet, and wheat. Among the crops, maize was the dominant cereal crop with 2,741,101 tonnes followed by paddy 796,151 tonnes, sorghum 142, 184 tonnes, bulrush millet 18,973 tonnes, finger millet 8,977 tonnes and wheat 6,342 tonnes. (Table 10).

LONG RAINY SEASON

Like in the short rainy season, in the 2014/15 agriculture year, the main cereal crops grown in the long rainy season included maize, paddy, sorghum, bulrush millet, finger millet, and wheat. Among the crops, maize was the dominant cereal crop with 5,022,752 tonnes followed by paddy 1,689,873 tonnes, sorghum 389,507 tonnes, finger millet 46,683 tonnes and wheat 45,279 tonnes. (Table 11).

PERMANENT CROPS

Permanent crops these are crops which are produced from plants which last for many seasons, rather than being replanted after each harvest.

The main permanent crops in the 2014/15 agriculture year included cashew nuts, banana, coffee, mango, lime, coconut, orange, sisal, sugar cane, palm oil, cassava, tea, cloves, cinnamon, avocado and pineapple. Among the permanent crops, the main ones with their quantity produced were cassava (1,099,165 tonnes), banana (631,489 tonnes) and sugar cane (493,391 tonnes). (Table 12).
