PREFACE AND ACKNOWLEDGEMENTS

This is one of a series of six regional reports that are available from the Agricultural Statistics Unit, Ministry of Agriculture. Agricultural Statistics provides an overall summary on agriculture in the country. This series reflects the latest in a continuing effort to provide meaningful data at the regional level for the formulation and evaluation of local agricultural policy. Although data contained in this report can be used independently, greater benefits will be realized if it is used in conjunction with the national report.

A number of persons contributed towards the successful production of this report. The Division of Planning and Statistics is indebted to the following individuals: L. Mmolawa, M. Matlho, I. Mbakiso, G. Chengeta, T. Mapfumo, Francistown Region Statistical Team; Geoff Hinchliffe, Systems Analyst/Programmer; and Gerald Bulawa, Cartographer.

FRANCISTOWN REGION

1981 AGRICULTURAL STATISTICS

This report presents the results of the 1981 Crop and Livestock Survey for the Francistown Region. This region is comprised of two Agricultural Districts -- Tati and Tutume. Data for traditional farmers who live year-round in Francistown as well as data on the commercial farms located in this region are not included in this report.

Survey data were collected using a multi-stage stratified probability sample design. The region was divided into survey blocks stratified by district according to lands, cattle post and village areas. From a total of 284 first stage survey blocks, a probability sample of 36 blocks was selected. At the second stage 269 randomly selected farm holders (approximately one out of every 44 farm holders in the Region) were interviewed. Those farmers who reported holding 100 or more cattle were selected with a probability of one.

The measure of precision for the regional estimates is given in terms of Coefficient of Variation (C.V.). The Coefficients of Variation are shown in summary Tables 1 and 2.
