POLJOPRIVREDA

Podaci o opštem pregledu razvoja poljoprivrede prikupljeni su kompleksnim godišnjim izvještajem za koje su metodološka objašnjenja data u odgovarajućim poglavljima ovog Godišnjaka.

Biljna proizvodnja

Od početka 60-tih godina prošlog vijeka prikupljaju se podaci o površinama, voćnim stablima, čokotima vinove loze, proizvodnji i domaćoj preradi, putem redovnih godišnjih izvještaja poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga), a podaci se baziraju na knjigovodstvenoj i drugoj evidenciji ovih organizacija.

Za privatna poljoprivredna gazdinstva podaci za površine su procjene zasnovane na podacima sveobuhvatnog katastra. Sprovođenjem Popisa poljoprivrede u 2010. godini, stvoreni su uslovi za početak usklađivanja statistike biljne priozvodnje sa Eurostat-ovim preporukama. Dosadašni metod procjene zamijeniće se istraživanjima koja će biti direktno vezana za gazdinstva (metod uzorka). Cilj je da se obezbijede zahtijevani podaci od strane Eurostat-a o površinama i proizvodnji koji zadovoljavaju statistički prag, ali i da se izgradi sistem za zadovoljavanje nacionalnih potreba za podacima ispod preciziranog praga.

Sadašnju situaciju u ovoj oblasti karakteriše razlika između podataka dobijenih u redovnim godišnjim istraživanjima zasnovanim na sveobuhvatnom katastru sa podacima obezbijeđenim sveobuhvatnim Popisom poljoprivrede 2010. Poznato je da je nakon popisa poljoprivrede sprovedeno postpopisno istraživanje o kontroli i kvalitetu i da su dobijeni podaci pokazali da je Popis realizovan u skladu sa metodologijom i da su odstupanja u obuhvatu i kvalitetu podataka prikupljenih popisom i post popisnim istraživanjem statistički neznačajna, odnosno nalaze se u zadovoljavajućim intervalima odstu-panja. Iz tog razloga odlučeno je da će se podaci iz popisa poljoprivre-de objaviti i u statističkom godišnjaku kao preporuka za korištenje korisnicima statističkih podataka do momenta kada će Zavod za statistiku sprovesti novo istraživanje o zasijanim površinama i biljnoj proizvodnji na bazi uzorka čime će se obezbijediti bolja pouzdanost podataka. Ovo istraživanje planirano je da se sprovede kao Pilot istraživanje u periodu od 01.do 15. decembra 2013. godine. Paralelno sa ovim istraživanjem sprovodiće se i stara, tradicionalna istraživanja o površinama i prinosima isključivo radi praćenja trenda. Ovo će biti korišćeno za preračun vremenskih serija za period od 2007 do danas.

U narednom izdanju Godišnjaka planirano je objavljivanje preračunatih vremenskih serija na bazi podataka iz Popisa poljoprivrede 2010. za period od 2007. do 2013. godine.

Stočarstvo

Izvori i metodi prikupljanja podataka

Redovnim godišnjim izvještajima poljoprivrednih organizacija (poljoprivrednih preduzeća i zemljoradničkih zadruga) prikupljaju se podaci o broju i bilansu stoke, kao i podaci o proizvodnji mlijeka, jaja, vune i meda. Podaci za privatna poljoprivredna gazdinstva i domaćinstva prikupljaju se godišnjom anketom, koja je od 1961 - 1964. godine bila organizovana na principu prostog slučajnog uzorka, da bi od 1965. bio primijenjen dvoetapni uzorak. Broj anketiranih individualnih poljoprivrednih gazdinstava obuhvaćenih anketom iznosio je 15%. Uzorak za anketu o broju stoke sa stanjem 15. januar svake godine, sprovodi se od 1956. godine. Ovom anketom dobijeni su podaci i o obrtu stada.

Godine 1993. primijenjen je dvoetapni stratifikovani uzorak bez ponavljanja kojim je bilo obuhvaćeno preko 5070 privatnih poljoprivrednih gazdinstava i domaćinstava. Isti je korišćen za 13 redovnih statističkih istraživanje Ankete o broju stoke u domaćinstvima. U 2004. god. ažurirana je baza podataka na osnovu koje je izvršen izbor novog uzorka, primijenjen je dvoetapni stratifikovani uzorak bez ponavljanja sa popisnim krugovima kao primarnim i domaćinstvima kao sekundarnim jedinicama. Uzorkom je obuhvaćeno preko 4 940 privatnih poljoprivrednih domaćinstava. Isti uzorak je korišćen za anketu o broju stoke u domaćinstvima sa stanjem 15. 1. 2005., 15. 1. 2006. i 15. 1. 2007. godine. Ankete o broju stoke zasnovane na novom uzorku su dale razlicite rezultate u odnosu na predhodnu anketu zasnovanu na starom okviru.

AGRICULTURE

Data on general review of agricultural development are collected through complex annual reports. Methodological explanations are given in the corresponding chapters of the Yearbook.

Crop Production

Since the beginning of 60s of the last century data are collected on area, fruits, grapevines, production and home processing, through regular annual reports of agricultural organizations (agricultural companies and agricultural cooperatives), and the data is based on accounting and other records of these organizations.

For private agricultural holdings, data on areas are *estimates* based on data taken from comprehensive cadastral records. Conducting the Census of Agriculture in 2010 created the conditions to start the harmonisation of crop production statistics with Eurostat recommendations. Previously used estimation method will be replaced with the surveys which will be directly connected to the holdings (sample method). The aim is to provide the required data by Eurostat on areas and production that satisfy the statistical threshold, but also to build a system to satisfy the national needs for data, below a specified threshold.

The current situation in this area is characterized by the difference between the data obtained in the regular annual surveys, based on a comprehensive cadastre data provided by a comprehensive census of agriculture 2010. It is known that after the census of agriculture conducted was post-census survey on control and quality, and that obtained data showed that the Census was carried in accordance with the methodology, and that the deviations in the coverage and quality of data, collected by Census and post- enumeration surveys, statistically insignificant, and they are in satisfactory interval deviation. For this reason it was decided that the data from the Census of Agriculture will be published in the Statistical Yearbook, as a recommendation for the use of users of statistical data, to the moment when the Statistical Office conducts a new survey on a cultivated land and crop production, based on a sample which will provide better data reliability. This survey was planned to be conducted as a pilot study for a period of 01.till 15th of December 2013. In parallel with this survey, it will be conducted old, traditional survey on areas and yields, only to monitor the trend. This will be used for calculation of time series for the period from 2007 to the present.

In the next edition of the Yearbook is planned publication of recalculated time series, based on data from the Census of Agriculture 2010, for the period since 2007. the 2013th year.

Livestock breeding

Sources and methods of data collection

Data on number of livestock and livestock turnover, as well as data on production of milk, eggs, honey and wool are collected through regular annual reports of agricultural organizations (enterprises and collective farms) and annual surveys on private agricultural holdings and households. From 1961 to 1964, it had been organized by a principle of simple random sample, and as of 1965, a two-stage sample was introduced. Since 1968, 15 percent of agricultural holdings were covered by the survey. As of 1956, a livestock sample survey was carried out every year, on January 15th. The survey was also providing data about livestock turnover.

In 1993, a two-stage stratified simple random sample with no repetition was used covering 5070 private agricultural holdings and households. The same sample was used for 13 regular Livestock surveys in households. In 2004, the database was updated as the frame of a new sample, and two-stage stratified sample with no repetition has been introduced with enumeration areas as primary, and households as secondary units. The sample covers over 4940 private agricultural holdings. The same sample was used for Livestock survey as on 15.01.2005, 15.01.2006. and 15. 01. 2007. Livestock surveys based on new sample gave different results compared to the previous survey based on the old frame.

Postojali su opravdani razlozi da se sumnja u kvalitet rezultata i u jednom i u drugom slucaju i primijenjena je jedna od modernih statističkih metoda koja se koristi u savremenoj statistici a to je kontrola kvaliteta. Uporedo sa anketom zasnovanom na novom uzorku izvedena je Pilot studija 2005 godine „Ocjena kvaliteta okvira za anketu o poljoprivrednim gazdinstvima". Pilot studijom izvršena je ocjena kvaliteta okvira a takođe dobijeni su i korekcioni faktori koji su primije-njeni za korekciju rezultata Ankete o broju stoke u poljoprivrednim gazdinstvima, čime je ispravljena nedovoljna pokrivenost okvira. Zbog velike razlike u brojnom stanju stoke, naročito kod pojedinih vrsta stoke (npr. goveda) nije se mogla primijeniti metoda vremenskog sravnjenja serije što je uslovilo potpuno novi početak za statistiku stočarstva.

Takođe, primijenjeni koeficijenti koji su ispravili nedovoljnu pokrivenost u okviru zbog veličine uzorka za Pilot studiju mogu se primijeniti isključivo za nivo države, a ne i za nivo Opština.

U junu 2010. godine sproveden je Popis poljoprivrede, prvi u Crnoj Gori poslije 50 godina. U 2011. god. ažurirana je baza podataka na osnovu koje je izvršen izbor novog uzorka, primijenjen je dvoetapni stratifikovani uzorak bez ponavljanja sa popisnim krugovima kao primarnim i gazdinstvima kao sekundarnim jedinicama. Uzorkom je obuhvaćeno preko 5 130 privatnih poljoprivrednih gazdinstava. Uzorak je korišćen za anketu o stoci za 2011. godinu i prvi put je poslije 56 godina promijenjen referentni period sa 15. januara na stanje 1. decembra u cilju harmonizacije sa standardima EU. Takođe, samim tim sto je promijenjen okvir za izbor uzorka, umjesto baze podataka iz Popisa stanovništva stanova i domaćinstava ažurirana je baza podataka iz Popisa poljoprivrede, doslo je do promjena u klasifikaciji, statističkoj metodologiji, statističkoj populaciji i konceptima sto je uslovilo jednokratni prekid vremenske serije. Planiran je rad na vremenskom sravnjenju serija.

Podaci o proizvodnji prirasta žive stoke i proizvodnji mesa obračunati su na osnovu raspoloživih podataka o bilansima stoke Ankete o stoci, godišnjeg izvještaja o stočarstvu poljoprivrednih organizacija i podataka o klanju stoke na klanicama.

Podaci o veterinarskim radnicima i objektima preuzeti su od Veterinarske uprave i Agencije za ljekove i medicinska sredstva Crne Gore.

Obuhvat

Podaci o broju i bilansima stoke obuhvataju stočni fond u poljoprivrednim preduzećima i zemljoradničkim zadrugama, privatnim poljoprivrednim gazdinstvima i nepoljoprivrednim domaćinstvima.

Definicije

Bilans stoke predstavlja obrt stada tokom godine u kome se registruju promjene u brojnom stanju stoke.

Prirast stoke predstavlja proizvodnju žive mjere stoke tokom godine, kao rezultat priploda, porasta i gojenja stoke. Čini ga:

- razlika težine žive stoke na kraju i na početku godine;
- razlika težine prodate i kupljene stoke;
- živa težina zaklane stoke na gazdinstvima.

Bruto težina stoke predstavlja težinu životinja neposredno pred klanje.

Neto težina stoke predstavlja težinu zaklanih životinja poslije otklanjanja određenih djelova u zavisnosti od vrste i kategorije stoke, tj. težinu očišćene zaklane životinje.

Agromonetarna statistika

Izvori i metode prikupljanja podataka

Mjesečnim statističkim istraživanjima prikupljaju se podaci o vrijednostima, količinama i prosječnim proizvođačkim cijenama proizvoda poljoprivrede, šumarstva i ribarstva. Prikupljaju se podaci o količinama i vrijednostima otkupljenih poljoprivrednih proizvoda od individualnih proizvođača i preduzeća. Izvještaj o otkupu podnose preduzeća i zemljoradničke zadruge koje se bave otkupom poljoprivrednih proizvoda neposredno od individualnih proizvođača, u cilju prodaje i/ili prerade otkupljenih proizvoda. Izvještaj podnose i poslovne jedinice (otkupne stanice) u sastavu trgovinskih, industrijskih i drugih preduzeća, ukoliko vrše otkup poljoprivrednih proizvoda.

There were justifying reasons to suspect in the quality of results in both cases, therefore quality control, one of modern statistical methods used in modern statistics, was applied. Parallel with the survey based on new sample, the Pilot study 2005 "Quality assessment of frame for Survey on agricultural holdings" was done. Pilot study did the assessment of quality of frame and gave correction factors applied for the correction of the results of the Livestock survey in agricultural holdings, which corrected the under-coverage of the frame. Due to the considerable difference in be livestock balance, especially in certain types of livestock (i.e. cattle) the method of harmonization of time series could not be done that influenced the completely new start in livestock statistics.

Additionally, the applied coefficients corrected the under-coverage in the frame and due to size of the sample for the Pilot study; they could be applied to the state level only and not to the municipality level.

In June 2010 the Census of Agriculture was conducted, the first one in Montenegro after 50 years. In 2011, the database was updated on the basis of which the selection of new sample was done; two-phase stratified sample was done without repetitions with enumeration areas as primary and holdings as secondary units. The sample covered over 5 130 family agricultural holdings. The sample was used for the survey on livestock for 2011, and for the first time after 56 years the reference period was changed from 15 January to 1 December situation aimed at the harmonization with the EU standards. Also, the in addition to the changed frame for the selection of sample, instead of the database from the Census of Population, Dwellings and Households, there was updated the database from the Census of Agriculture, changes in classification, statistical methodology, statistical population and concepts causing the one-off interruption of time series. There is plan to work on time series adjustment.

Livestock increase and meat production data have been calculated on the basis of livestock balance data from the Survey on livestock, annual report on livestock breeding of agricultural organizations and data on slaughtering in abattoirs.

The data on the veterinary workers are obtained from Veterinary Administration and Agency for Medicines and Medical Devices of Montenegro.

Coverage

Data on the number and balances of livestock cover livestock of agricultural enterprises, agricultural co-operatives, private agricultural holdings and non-agricultural households.

Definitions

The *livestock balance* represents changes in number of livestock during reference year.

Livestock increase represents livestock live-weight breeding production, livestock growing and fattening, throughout the year. It includes:

- livestock weight difference at the end and beginning of year
- weight difference between sold and purchased livestock
- live weight of slaughtered livestock in holdings.

Gross-weight of livestock is the weight of live animal just before slaughtering.

Net-weight of livestock is the weight of slaughtered animal after removal of certain parts, depending of livestock type and category, i.e. the weight of slaughtered and dressed animal.

Agro – monetary statistics

Sources and methods of data collection

With monthly statistical surveys data are collected on the value, quantities and average producer prices of agricultural, forestry and fishery products. Data are collected on quantities and values of purchased products, by individual preducers and enterprises. Report on purchase is submitted by enterprises and agricultural cooperatives, dealing with purchase of agricultural products directly from individual producers, with the aim of sale and/or processing of purchased products. Report is also submitted by business entities (purchase stations) which are part of trade, industrial and other enterprises, if they deal with purchase of agricultural products.

Takođe, prikupljaju se i podaci o realzaciji (prodaji) poljoprivrednih proizvoda iz sopstvene proizvodnje poljoprivrednih preduzeća i zemljoradničkih zadruga i jedinica koje se bave poljoprivrednom prozvodnjom i prodajom, a nalaze se u sastavu nepoljoprivrednih preduzeća.

Obuhvat

Svrha istraživanja jeste prikupljanje podataka o prosječnim otkupnim i prodajnim proizvođačkim cijenama proizvoda poljoprivrede, šumarstva i ribarstva.
Kriterijum za obuhvat pravnih lica je broj radnika (od 2 i više zaposlena radnika).
Napominjemo da zbog kriterijuma za obuhvat dobijeni podaci ne predstavljaju ukupan otkup i realizaciju (prodaju) na tetitoriji Crne Gore.
Izvještajni obrazac sadrži količine, vrijednosti i prosječne cijene.

Izvještajni obrazac sadržajno je usklađen sa Priručnikom statistike poljoprivrednih cijena EU-a (Handbook for EU Agricultural Price Statistics, 2008).

Definicije

Pod realizovanim količinama podrazumjevaju se isporuke poljoprivrednih proizvoda drugim preduzećima radi prerade i/ili prodaje. Isporuke prerađenih poljoprivrednih proizvoda daju se samo za one proizvode koji su dobijeni preradom sirovina sopstvene proizvodnje, isporuke sopstvenim prodavnicama koje vrše prodaju poljoprivrednih proizvoda na malo, neposrednu isporuku poljoprivrednih proizvoda na malo koju obavljaju proizvođači poljoprivrednih proizvoda izvan prodavnica, isporuke dotovljene i utovljene stoke (iskazuje se količina koja predstavlja prirast odnosno ostvarenu razliku u težini između nabavljenih i isporučenih grla stoke koja su kupljena od preduzeća, zadruge ili individualnih proizvođača u svrhu dostavljanja).
Ne smatraju se isporučenom količinom prerađeni proizvodi koji su izrađeni od sirovina nabavljenih od drugih preduzeća i individualnih proizvođača.

Vrijednosti realizovanih poljoprivrednih proizvoda predstavlja vrijednost isporučenih (prodatih) proizvoda iz sopstvene proizvodnje po prodajnim cijenama proizvođača. U vrijednost prodatih proizvoda uključuju se svi troškovi oko pripreme proizvoda za isporuku do mjesta utovara (sortiranje, pakovanje, dovoz do mjesta utovara i sl.). Vrijednost isporuke sopstvenim prodavnicama na malo obračunava se po prodajnim cijenama proizvođača (obračunske cijene, bez marže i poreza).

Pod otkupljenim količinama podrazumjevaju se one količine poljoprivrednih proizvoda koje su u toku izvještajnog mjeseca preuzete neposredno od individualnih proizvođača. Otkupljene količine obuhvataju sve vidove otkupa, uključujući i proizvode dobijene od kooperanata za izvršene usluge, odnosno uloženi rad i sredstva kao i proizvode koji potiču iz ušura (vršidba, meljava, zamjena žita za brašno i dr). Žitarice sa vlagom iznad dozvoljene treba preračunati u suvo zrno, a zaklanu stoku i živinu u živu mjeru.

Vrijednost otkupa je izražena u cijenama po kojima preduzeća plaćaju otkupljene proizvode individualnim proizvođačima.

Premije koje individualni proizvođači dobijaju za isporučene proizvode nijesu uključene u vrijednost otkupa.
Ribarstvo

Ribarstvo

Izvori i metodi prikupljanja podataka

Osnovni cilj statistike ribarstva je prikupljanje podataka o ulovu morske i slatkovodne ribe. Pored ovog zadatak ove statistike je da prikupi podatke o: zaposlenom osoblju, o ribarskim objektima, o plovnim sredstvima, ribarskoj opremi, proizvodnji i ulovu ribe, proizvodnji ikre i mlađi i potrošnji hrane u ribnjacima.

Also, data are collected on realization (selling) of agricultural products, from own production of agricultural enterprises and agricultural cooperatives and units, that are dealing with agricultural production and sale, and they are within the non-agricultural enterprises.

Coverage

The purpose of survey is collection of data on average purchase and sale producer prices of agricultural, forestry and fishery products.
Criteria for coverage of legal entities is number of workers (from 2 and more employed workers).
We would like to point out that because of criteria for coverage obtained data do not present total purchase and realization (sale) on territory of Montenegro.

The reporting form contains quantities, values and average prices.
The reporting form has been harmonised, regarding content, with the Handbook for EU Agricultural Price Statistics, 2008.

Definitions

By realized quantities are considered deliveries of agricultural products to other enterprises, for fabrication and/or sale. Deliveries of processed agricultural products are only given for those products that are obtained by processing of row materials, from own production, deliveries to own shops which make retail trade of agricultural products, direct delivery of agricultural products to retail trade, done by producers of agricultural products, outside of shops, deliveries of fatten livestock (it is presented quantity that represents growth, i.e. the difference in the weight between purchased and delivered livestock heads, purchased from enterprises, cooperatives or individual producers with the aim of delivery).
It is not considered as delivered quantity processed products that are made of row materials obtained from other enterprises and individual producers.

Value of realized agricultural products represents value of delivered (sold) products from own production by selling producer prices. In the value of sold products included are all costs related to preparation of products for delivery to the place of loading (sorting, packaging, transport to the place of loading etc.). The value of delivery to own retail trade shops is calculated by producers' selling prices (calculation prices, without trading margin and taxes).

Purchased quantities are those quantities of agricultural products overtaken, during reporting month, directly from individual producers. Purchased quantities comprise all types of purchase, including products received from cooperatives for services performed, work and spent equipment, as well as for products deriving from compensation of products (treshing, grinding, exchange of grain for flour etc.). Cereals with moisture above allowed should be re-calculated in dry grain, and slaughtered livestock and poultry into live measure.

The value of the purchase is shown in prices, by which enterprises pay purchased products to individual producers.

Bonuses that individual producers receive for delivered products are not included in the value of purchase.

Fishing

Sources and methods of data collection

Primary objective of fishery statistics is data collection about the catch of sea and freshwater fish. Apart from that, the task of this statistics is also to collect data about employed persons, fishing objects, vessels, fishery equipment, production and catch of fish, production of spawn and progeny and consumption of food in fishponds.

Jedinice posmatranja u statistici ribarstva su: preduzeća za proizvodnju, ulov, promet i preradu ribe, ribarske zadruge, ostale privredne organizacije koje se bave ulovom i proizvodnjom ribe, Institut za biologiju mora, individualni ribari koji se bave ulovom za sopstvenu potrošnju ili prodaju i udruženja za sportski ribolov (bez obzira gdje se vrši ulov). Podaci o slatkovodnom i morskom ribarstvu prikupljaju se izvješ-tajnom metodom i metodom procjena.

Obuhvat

Podaci o morskom i slatkovodnom ribarstvu koji se prikupljaju izvještajnom metodom, a popunjavaju se iz knjigovodstvene evidencije preduzeća i zadruga, koje se bave ribolovom kao osnovnom ili sporednom djelatnošću, po pravilu se obuhvataju u potpunosti.

Međutim podaci koji se obezbjeđuju metodom procjena (ulov ribe privatnih ribara), zbog nepostojanja adekvatne ili nikakve evidencije, često se ne obuhvataju u potpunosti, naročito kada se radi o detaljima određene pojave i nižim nivoima.

Definicije

Privredni ribolov je djelatnost ulova ribe i drugih živih organizama slatkih i slanih voda zbog sticanja dobiti.

Brod je svaki plovni objekat koji ima palubu i zapreminu veću od 28,32 m^3 (10 BRT). Pod *čamcem* se podrazumijeva svaki plovni objekat sa manje od 10 BRT.

Units to be observed in fishery statistics are: enterprises for production, fishing, selling and manufacture of fish, fishery cooperatives, other economic organizations involved in fishery, Institute for Biology of the Sea, individual fishers catching fish for their own consumption or sale, and sport fishery associations (no matter where the fishing takes place).

Data on sea and freshwater fishing are obtained by reporting method and method of estimation.

Coverage

Data on sea and freshwater fishing, collected by reporting method and filled in from bookkeeping evidence of enterprises and cooperatives dealing with fishing as primary or secondary activity, are, as a rule, covered entirely.

However, data obtained by method of estimation (catches of the private fishers) are not covered entirely due to inadequate or missing evidence, especially about details of a certain category and lower levels.

Definitions

Economic fishing is an activity of fish catches and other live animals in freshwater and seawaters, for economic purposes.

Ship is any sailing object, having a board and over 28.32 m^3 (10 GRT). *Boat* is any sailing object of less than 10 GRT.
