CROP AREA AND OUTPUT FORECAST

Total estimated land area devoted to the production of major cereals in Nigeria decreased on overall. Rice area in 2015 increased marginally by about 2% while those of maize sorghum and millet reduced by 6, 8 and 2 % respectively because of tension generated by national election that encouraged massive movement of people, dry spells in the Central and South West zones and the Boko Haram insurgency that occurred in the South East Zone.

Maize area forecast was a decreased from 5.9 million hectares to 5.55million hectares. Rice area estimate is an increase of almost a hundred thousand hectares mainly from the irrigated cropping stimulated by ATA. Of the 4.998 million hectare sown to sorghum, as much as 8.24% decreased was the forecast in 2015. Similarly, maize production declined from 10.9 million tons in 2014 to 9.54 million tons in 2015 representing a 12.49% reduction. Sorghum output reduced by 10.7% from 6.34 million tons in 2014 to 5.663 million tons in 2015. Rice output forecast on the other hand showed an increase of over 13% from 6.69 million tons of paddy to 7.573 million tons of paddy in 2015 arising apparently form the enhanced use of improved seeds and fertilization promoted by with the Growth Enhancement Scheme especially at the rice intensive production belts of Niger, Benue, Kebbi, Jigawa, Ebonyi and other states. Millet output forecast was a reduction of 9.64 % from 1.63 million tons in 2014 to 1.48 million tons in 2015.

Beniseed and Soybean estimated area increased by 7 and 17% respectively over 2014 figures unlike estimated cotton area that is anticipated to decrease by almost 12.4%. The forecast for the areas under ginger and cocoyam are increases of 9.59% and 10.44% over 2014 figures. Both ground nut and cowpea areas in 2015 decreased by 3.29 and 1% relative to those of the previous year. Area forecast for Cassava and Yam in the current year increased by 3% and 4.46 % over those of 2014 respectively.

Outputs of both Soybean and Beniseed increased by about 13 % each. Soybean increased from 911,600 tons in 2014 to 1.031 million tons in 2015. Increase in the production of soybean occurred largely because farmers of cereals such as maize and sorghum shifted to legumes that require less fertilization and that has ready of market. Also, favourable price of beniseed in 2014 encouraged farmers to cultivate coupled with the incentives provided by government under ATA. The estimate for ground nut outputs was an increase of 2.86 % from 3.21 million tons in 2014 to 3.302 million tons in 2015. Estimated Cowpea output of 3.62 million tons in 2015 was essentially similar to that of 2014 with less than half a percent increase.

Output of yam in 2015 increased less remarkably by 1% compared with cassava that increased by 6.53%. Total yam output in 2104 was 43.7 million tons compared with 44.1 million tons in 2015. In 2015 57.9 million tons of cassava was the estimated production against 54.35 million tons produced in 2014. The forecast for cocoyam output was an insignificant increase of about 0.11% over that 3.273 million tons produced in 2014.

On overall, the outlook for food for next year 2016 giving the 2015 output trends of the major cereals and tubers looks likely to be challenging. Critical consideration for off-season irrigated agriculture is imperative.
