# 1. Introduction

Lesotho is divided into ten administrative districts that cover four ecological zones. The lowland zone is most densely populated and intensively cultivated zone with relatively high rainfall. The foothill zone, as compare to lowland is less populated with less rainfall. The mountain zone is the largest zone of the country that is characterized by very cold winter with snow. Senqu River valley is the smallest zone which runs across the districts of Mokhotlong, Thaba Tseka ,Qacha'nek, Quthing Mohale,s Hoek districts along the banks of Senqu River. The country has a predominantly agricultural dependent economy with a small industrial sector. The type of agriculture practiced is primarily subsistence with minimal commercial farming.

Agricultural Production Survey (APS) is an annual survey, which is undertaken by Bureau of Statistic (BOS). APS runs from the 1st of August of the current year to 31st July of the following year. APS concentrates on the production of both livestock and crops in the rural parts of the country. This report looks into agricultural events on crops and its production during 2007/2008 Agricultural year.

The 2007/2008 Crops Statistics report has covered information on area planted, harvested, production and yield for each of the following major crops: maize, wheat, sorghum, beans, peas and mixtures of crops such as maize and beans; maize and sorghum; sorghum and beans. Area failed under each crop and reasons for crop failure are also explained.

## 1.1 Sample Selection

Stratified multi-stage sampling scheme was adopted for the selection of the sample of APS for 2007/2008. Two or three enumeration areas were combined to form a PSU. A total of eighty Primary Sampling Units (PSU's) were selected at the first stage in the rural areas of the country. Individual farming households constitute secondary sampling Units (SSU's). For the estimation of crop area ten fields for each of the main crops per PSU constitute a third stage sample. A systematic sampling was adopted for selection of ten fields per PSU for crop cutting.

APS stratified farming households into:

- Households operating at least one field;
- Households raising at least one cow, five sheep and or goats;
- Households operating both fields and livestock.

Households that do not meet any of the above requirements are not included in the survey. All fields owned by the selected households are measured including fields that are rented in by those selected households. Fields that are rented out by the selected households are not included. Likewise fields which are being share-cropped are counted on the owner's side.

## 2.1 Method of Data Collection

Physical measurement of the fields operated by selected farming households was done. All fields owned and operated by the household either planted or fallow were measured. Field measurement was done using measuring tape, a compass and wire pegs. Each enumerator was responsible for one PSU. Data on yield is collected from two sub-plots of 10 square meters each from selected field.

Yield sub-plot is located using random numbers sheet; the enumerator select a random number point 1 (P1) between 1 and the longest length of the field and the second number point 2 (P2) which is between 1 and the longest width of the field. A tape measure is used by enumerator to measure the number (P1) along the length of the field, and measure the second number (P2) along the width of the field. Then the first sub-plot is constructed. The same procedure is repeated to construct the second sub-plot.

For yield calculation, an average weight from the two sub-plots is taken for each field. Then the PSU average yield in each zone within the district is calculated. Finally, average district yield is obtained and multiplied by area harvested to get production. So the national production is the sum of all district production.

## 2 Area Planted

This refers to area planted in hectares (ha) to pure stand crops such as maize, sorghum, wheat, beans, peas and mixture of crops such as maize and beans, maize and sorghum, sorghum and beans, beans and peas and other crop mixtures.

### 2.1 Summer Crops

Table 1.1 shows area planted to five major summer crops in 2007/2008 Agricultural year by district. Crops that are grown were maize, wheat, sorghum, beans and peas, and their area planted is calculated in a way that they include mixture, for example maize is composed of pure stand maize and maize mixture such as maize and beans, maize and peas. Therefore, the same procedure applied to all other major crops.

In 2007/2008 Agricultural Year, the estimated total area planted to maize was 205,744 ha showing an increase of 30 percent from 144,696 ha in 2006/2007 Agricultural Year. Total area planted to sorghum (53,961) ha and beans (20,107) ha have increased by 27 percent and 58 percent respectively from 39,296 ha (sorghum) and 8,444 ha (beans) in 2006/2007 Agricultural year.

The highest area planted to maize was observed in Leribe with 41,181 ha followed by Maseru with 34,560 ha. Comparatively, in 2006/2007 Agricultural Year, the largest area planted to maize was observed in Berea with 25,844 ha followed by Leribe with 22,525 ha. This had been due to factors such as early moderate rain that resulted in planting in time, and the introduction of block farming.

**Table 1.1: Area Planted by Crop and District, Summer 2007/2008**

| District | Maize | Wheat | Sorghum | Beans | Peas |
|---|---|---|---|---|---|
| Botha Bothe | 9,581 | 599 | 9,702 | 1,955 | 989 |
| Leribe | 41,181 | 1,249 | 7,678 | 2,684 | 104 |
| Berea | 26,803 | 4 | 6,615 | 4,830 | 17 |
| Maseru | 34,560 | 1,710 | 7,032 | 2,493 | 36 |
| Mafeteng | 24,968 | 79 | 6,102 | 1,604 | 35 |
| Mohale's Hoek | 27,019 | 1,500 | 10,141 | 2,498 | 28 |
| Quthing | 8,675 | 664 | 3,594 | 755 | 64 |
| Qacha's Nek | 8,412 | 1,975 | 818 | 560 | 575 |
| Mokhotlong | 8,880 | 5,097 | 298 | 1,157 | 307 |
| Thaba Tseka | 15,666 | 5,025 | 1,982 | 1,572 | 482 |
| **Lesotho** | **205,744** | **17,901** | **53,961** | **20,107** | **2,636** |

## 2.2 Winter Crops

Table 1.2 shows area planted to major winter crops in 2007/2008 Agricultural Year by district. Major crops that were grown were wheat and peas. Due to the cold weather in the mountains, winter crops are mainly planted in lowlands and foothills. The estimated total area planted to wheat has increased by 12 percent from 10,738 ha of 2006/2007 to 12,152 ha of 2007/2008, and peas has decreased by 19 percent from 3,225 ha of 2006/2007 to 2,614 ha of 2007/2008 Agricultural Year.

The highest area planted to wheat was observed in Mafeteng with 5,470 ha followed by Maseru with 2,032 ha in 2007/2008. Similarly, in 2006/2007 Agricultural Year Mafeteng and Leribe observed the largest area planted to wheat with 4,043 ha and 2,792 ha respectively. Mafeteng contributed almost 58 percent of the country's area planted to peas.

**Table 1.2: Area Planted by Crop and District, Winter 2007/2008**

| District | Wheat | Peas | Barley | Oats |
|---|---|---|---|---|
| Botha Bothe | 207 | 50 | 31 | 0 |
| Leribe | 1,725 | 660 | 91 | 0 |
| Berea | 1,188 | 61 | 1 | 0 |
| Maseru | 2,032 | 137 | 67 | 87 |
| Mafeteng | 5,470 | 1,125 | 262 | 24 |
| Mohale's Hoek | 1,529 | 580 | 175 | 0 |
| Quthing | 0 | 0 | 66 | 0 |
| Qacha's Nek | 0 | 0 | 2 | 0 |
| Mokhotlong | 0 | 0 | 23 | 0 |
| Thaba Tseka | 0 | 0 | 2 | 0 |
| **Lesotho** | **12,152** | **2,614** | **719** | **111** |

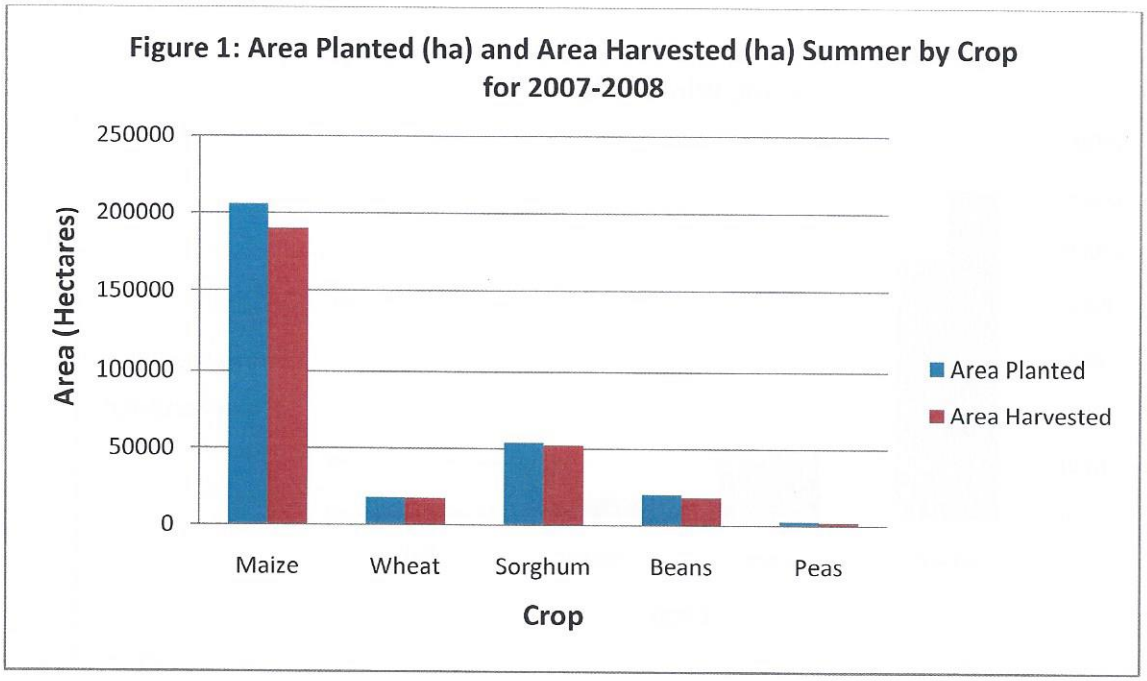
## 3 Area harvested

Having reached maturity, crops are then harvested and thus the area harvested is defined as the difference between area planted and area failed for each crop.

### 3.1 Summer Crops

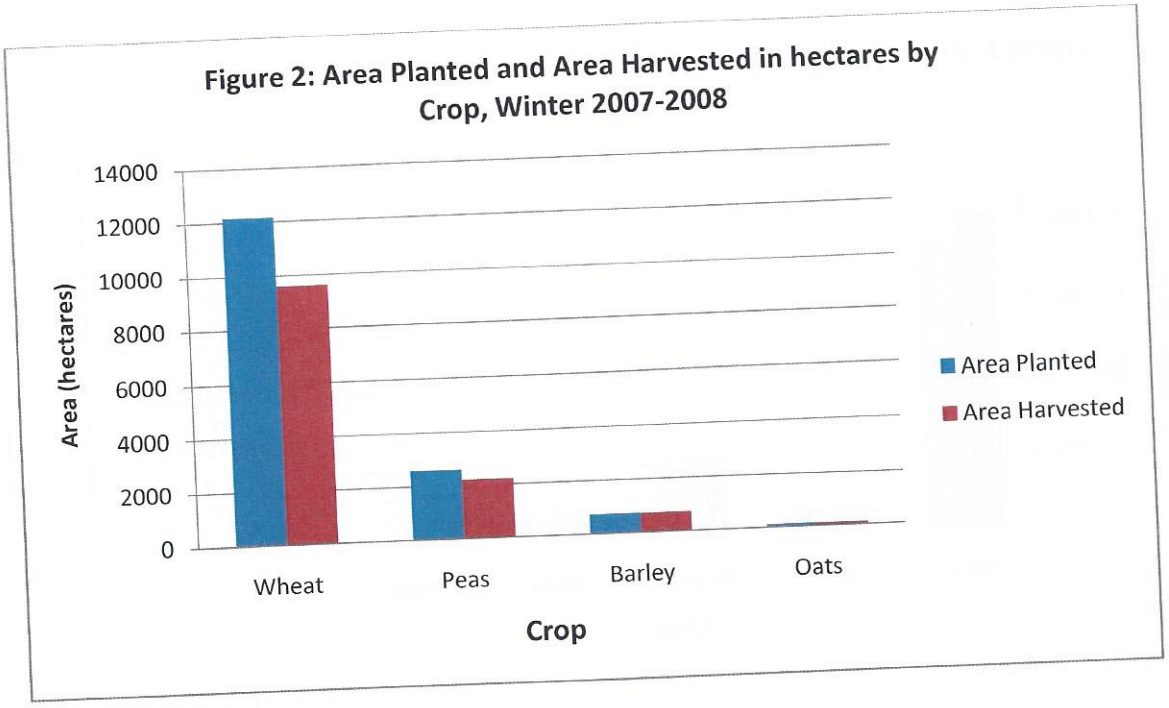
Figure 1 shows area planted and area harvested by crop in 2007/2008 Agricultural Year. Regardless of late and moderate rainfall experienced in 2007/2008 Agricultural Year, area planted to maize was 205,744 ha whereas area harvested was 190,025 ha. Area planted to sorghum in 2007/2008 was 53,961 ha whereas area harvested was 18,307 ha; these differences between area planted and area harvested may be caused by drought, animals and hail. Area planted to wheat and beans was 17,901 ha and 20,107 ha while area harvested was 17,766 ha and 18,307 ha respectively.

According to table A3 annex Leribe, and Mohale's Hoek contributed to largest area harvested with 39,370 ha and 25,655 ha respectively. Maize has been the most planted crop in comparison to other summer crops.



### 3.2 Winter Crops

Figure 2 portrays the area planted and area harvested in winter 2007/2008 Agricultural Year. Total area planted to wheat was 12,152 ha while area harvested was 9,595 ha and peas was planted to 2,614 ha though harvested was 2,219 ha. The area planted to barley was 719 ha and harvested was also 719. The districts that had the largest area planted to wheat were Mafeteng (5,470 ha), Leribe (1,725 ha) and Maseru (2,032 ha). It is worth noting that no winter crops were grown in the mountains mainly because of severely cold weather and snow fall in winter.

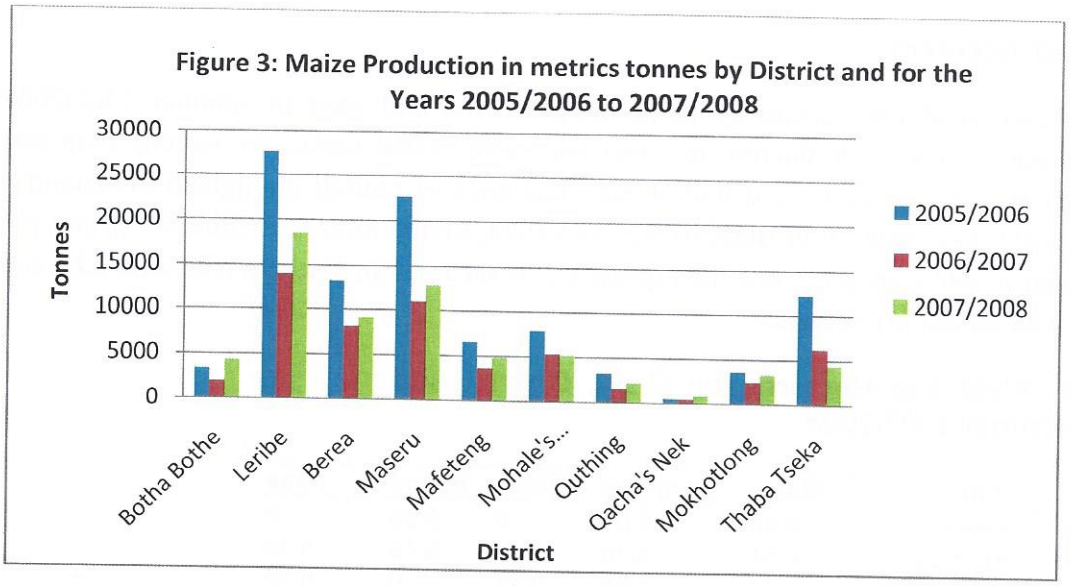


## 4 Production

Production can be defined as the overall crop-output obtained from the harvested fields, thus area harvested multiplied by yield.

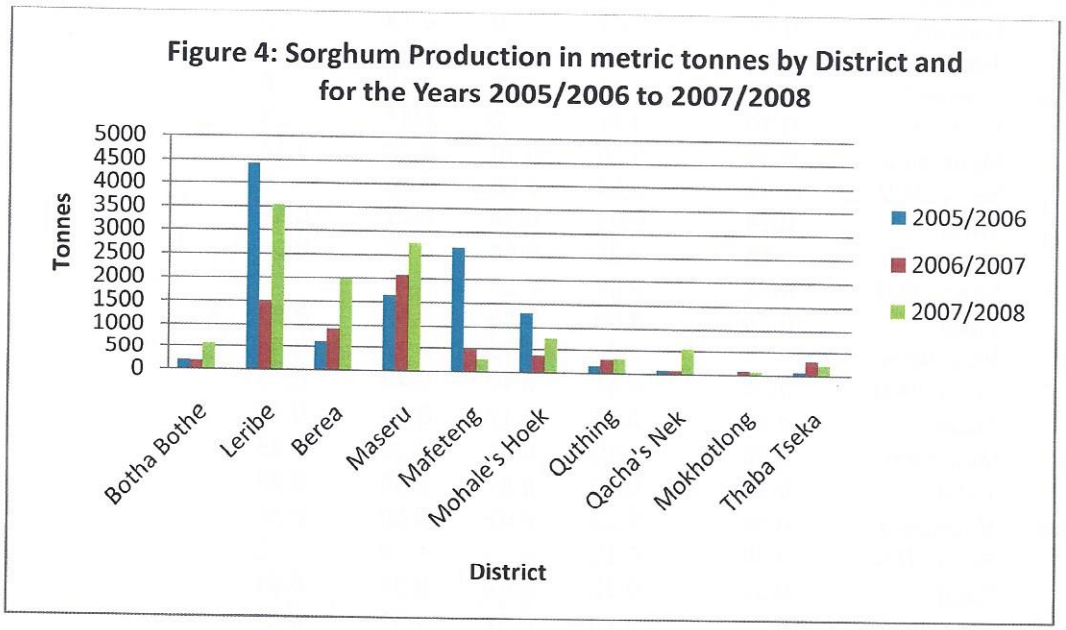
### 4.1 Maize Production

Figure 3 shows maize production in metric tonnes (mt) by district in agricultural years 2005/ 2006 to 2007/2008. Leribe observed the highest maize production in all the three consecutive years followed by Maseru and Berea. In 2007/2008, Leribe, Maseru and Berea maize production estimates were 18,461 mt, 12,775 mt and 9,095 mt respectively. Qacha's nek was observed the lowest to maize production.



## 4.2 Sorghum production

Figure 4 depicts sorghum production by district in Agricultural year 2005/2006 to 2007/2008. In 2007/2008, Leribe recorded the highest with 3,551 mt, Maseru with 2,762 mt and Berea with 1,981 mt of sorghum respectively. In 2005/2006 and 2007/2008 the highest sorghum production was observed in Leribe, Maseru, Berea, and Mafeteng. The lowest was observed in Mokhotlong, ThabaTseka, Botha Bothe and Qacha's nek.



## 5 Yield per hectares

Table 1.3 shows yield per hectare by major crop, district and zone in summer 2007/2008 Agricultural year. Yield is production per area harvested. Yield varies for various crop and districts. This may be caused by distribution and frequency of rainfall throughout the country. The highest yield was recorded in Botha-Bothe with 0.49, Leribe followed with 0.48 tonnes per hectares of maize, while sorghum had the highest yields recorded in Qacha's Nek with 0.87 and Leribe with 0.48 tonnes per hectares.

**Table 1.3: Yield Per Hectares by Crop, District and Zone in summer 2007/2008**

| District | Zone | Maize | Sorghum | Wheat | Beans | Peas |
|---|---|---|---|---|---|---|
| Botha Bothe | Lowland | 0.38 | 0.01 | 0 | 0.25 | 0 |

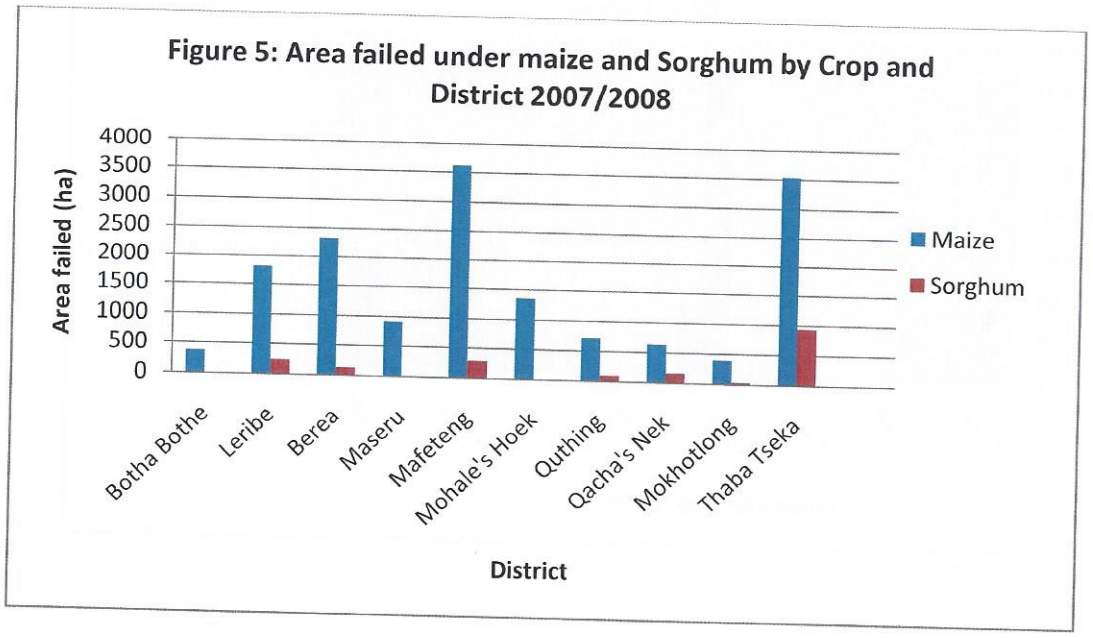
## 6 Area under Crop Failure- Summer Season

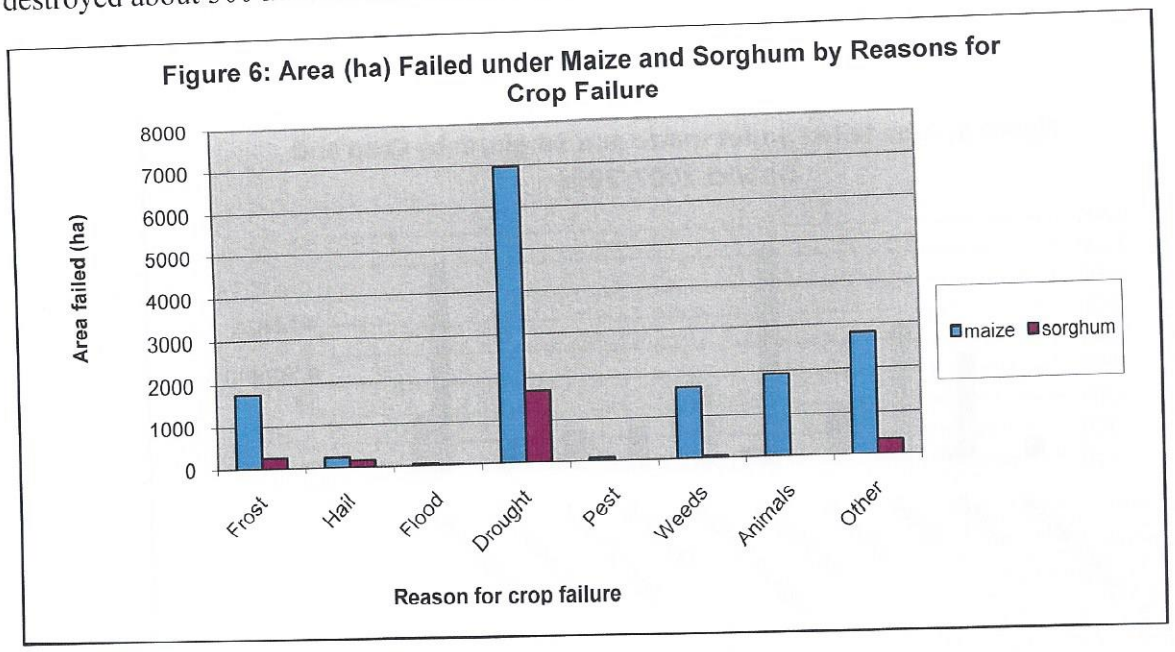
Figure 5 shows area failed under maize and sorghum for the Agricultural year 2007/2008. Crop failure is a situation where a crop does not reach its maturity stage. The main reasons for crop failure are frost, hail, flood, drought, pest, weeds and animals. Mafeteng, and Thaba -Tseka, recorded the highest area that failed under maize with 3,614 ha and 3,540 ha respectively while with sorghum the highest area failed were observed in Thaba Tseka with 950 ha.



## 6.1 Reasons for Crop Failure- maize and sorghum

Figure 6 presents crop failure by area and reason, summer 2007/2008. The main reason for the crop failure under both maize and sorghum was drought. Almost 6,950 ha planted to maize were lost due to drought while all other factors contributed below 3,000 ha of area planted. In the same manner, 1,697 ha under sorghum failed due to drought while reason such as frost, hail etc destroyed about 300 ha under the same crop.

**Figure 6: Area (ha) Failed under Maize and Sorghum by Reasons for Crop Failure**



# 7 Area under Crop Failure- Winter season

Table 1.4 shows crop failure by crop type, district and zone for Agricultural year 2007/2008. The highest area failed under wheat was experienced in Mafeteng with 1,081 ha followed by Leribe with 604 ha. Botha Bothe recorded 13 ha of crop failure to peas. Peas were mostly affected in Berea with 204 ha and Mafeteng followed with 139 ha. Crop failure was highly experienced in the lowlands since there were no planting activities done due to coldness in some ecological zones.

**Table 1.4 Area (ha) Failed in Winter by Crop type, District and Zone 2007/2008**

| District | Zone | Wheat | Peas | Barley |
|---|---|---|---|---|
| Botha Bothe | Lowlands | 0 | 13 | 0 |
| Leribe | Lowlands | 604 | 112 | 4 |
| Berea | Lowlands | 465 | 204 | 35 |
| Maseru | Lowlands | 123 | 0 | 0 |
| Mafeteng | Lowlands | 1,037 | 139 | 0 |
| Mohale's Hoek | Lowlands | 328 | 125 | 0 |
| **Lesotho** | | **2557** | **593** | **39** |

## 7.1 Reasons for Crop Failure under Wheat, Peas and Barley

As mentioned earlier, wheat and peas are major crops that are grown in the lowlands of the country during winter season. Drought and animals, as with summer crops have mostly caused the failure of the winter crops.

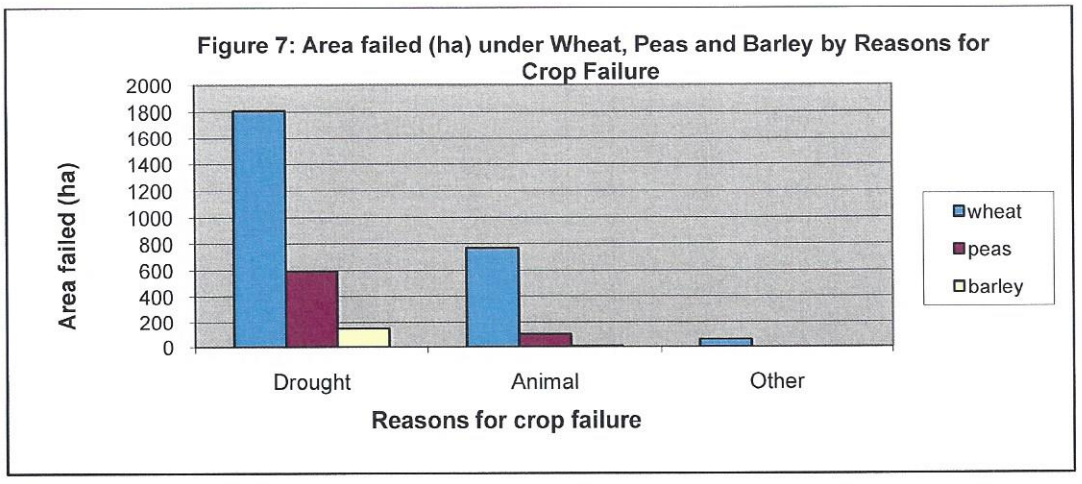


**Table A1: Area Planted in Summer by Crop Type, District and Zone, 2007/2008**
