FOREWORD

This is the 6th edition of the statistical report entitled **Major Crops Statistics of the Philippines**. It presents the 2006 to 2010 annual data on volume of production, area planted/harvested and number of trees/hills of 21 major crops under the following commodity groupings: Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root Crops. The data are disaggregated down to the provincial level. The 21 major crops are those highlighted in the Report on the Performance of Agriculture which is released quarterly by the Bureau of Agricultural Statistics (BAS).

In response to the needs of our data users, the report presents statistics on banana, mango, coffee and tobacco by variety.

This report was prepared by the Crops Statistics Division (CSD) of the BAS. It is intended to serve as ready reference for our various clients and stakeholders in the agriculture sector.

The BAS would appreciate comments and suggestions from our data users and readers for further improvement of this report.

EXPLANATORY NOTES

I. Crops Covered

This statistical report covers the following major crops:

COMMON NAME	SCIENTIFIC NAME	ENGLISH NAME
Palay	*Oryza Sativa Linn*	Palay/Paddy
Mais	*Zea mays L.*	Corn/Maize
Niyog	*Cocos nucifera L.*	Coconut
Tubo	*Saccharum officinarum L.*	Sugarcane
Saging	*Musa sapientum var.*	Banana
Pinya	*Ananas comosus L.*	Pineapple
Kape	*Coffea sp.*	Coffee
Mangga	Mangifera indica L.	Mango
Tabako	*Nicotiana tabacum*	Tobacco
Abaka	*Musa textilis Nee*	Abaca
Mani	*Arachis hypogea Linn.*	Peanut
Mongo	*Vigna radiata L.*	Mungbean
Camoteng kahoy	*Manihot esculenta Crantz.*	Cassava
Kamote	*Ipomoea batatas Lam*	Sweet potato
Kamatis	*Lycopersicon esculentum Mill.*	Tomato
Bawang	*Allium sativum Linn.*	Garlic
Sibuyas	*Allium cepa Linn.*	Onion bulb
Repolyo	*Brassica oleracea L. (Capitata grp)*	Cabbage
Talong	*Solanum melongena Linn*	Eggplant
Kalamansi	*Citrus madurensis Lour.*	Calamansi
Raber	*Picus Elastica Roxb*	Rubber

II. Sampling Methodology

A. CEREALS

The sampling design of the Palay and Corn Production Survey (PCPS) uses the results of the 1991 Census of Agriculture and Fisheries (CAF) as sampling frame. The survey domain is the province. It employs a replicated two-stage stratified sampling design. The barangay as the primary sampling unit (psu) is selected using a probability proportional to size (*pps*) scheme. The farming household which serves as the secondary sampling unit (ssu) is selected systematically.

1. First Stage (Primary) Sampling Unit Selection

a. For Major Palay/Corn Provinces

The primary sampling units are divided into strata of approximately equal sizes relative to the total farm area devoted to palay/corn. The largest barangays in each municipality are lumped into one stratum (generally, the 10th stratum). The remaining barangays are then divided into 9 strata such that the aggregate palay/corn farm area of all the barangays constituting any one stratum is approximately the same as that of the other strata.

Using the area devoted to palay/corn as a measure of size of the barangay, a *pps* sample of four (4) independent barangays is selected from each stratum. Each sample barangay represents a replicate sample for that stratum.

b. For Other Provinces

The primary sampling units are divided into 5 strata with the largest barangays constituting the 5th stratum. A pps sample of two (2) independent barangays is selected from each stratum.

2. Second Stage (Secondary) Sampling Unit Selection

Households in each sample barangay are classified into farming and non-farming. For the PCPS, the selection of sample households is limited only to the group categorized as farming households. From the list of farming households and using a random start and a sampling interval, the sample households are drawn systematically.

B. Other Crops

For crops other than palay and corn, basic production statistics are generated thru the Crops Production survey which is based on non-probability sampling. That is, there is no frame where samples are selected. The domain of the survey is the province. The primary data sources are stratified into *small farms* and *large farms/plantations*. For large farms/plantations, a maximum of five (5) plantations are randomly chosen to represent the whole province. The cut-off size of large farms/plantations in hectares varies by crop and by major island grouping, Luzon, Visayas and Mindanao. For *small farms*, crops statistics generation employs two-stage sampling design. That is, for each crop the top five (5) producing municipalities in a province serve as the primary sampling units (psu). Five producing farmers from each municipality are chosen as the ultimate sampling units (usu). Under this approach, it is possible that a farmer may be drawn as a sample for more than one crop which he plants and harvests.

B1. Data on Other Crops with Specialized Commodity Agencies

Area and production data for sugarcane and abaca include estimates generated from the BAS surveys and reports from specialized commodity agencies. For sugarcane, BAS covers cane that are used for chewing and production of panocha/muscovado and vinegar, while the Sugar Regulatory Administration (SRA) is the source of data in cane that are milled for centrifugal sugar. Abaca fiber that passes through baling stations is reported by the Fiber Industry Development Authority (FIDA), while the BAS collects data on unbaled fiber. Data on area and production of coconut are the results of the Quarterly Coconut Production Survey (QCPS), a joint undertaking between the BAS and Philippine Coconut Authority (PCA).

The SRA releases monthly preliminary data, while FIDA releases data on a quarterly basis. These data are finalized only in the succeeding year. The BAS, on the other hand, allows revision of the quarterly data it collects in the succeeding quarter. As a result of this difference in the time lag in releasing the final estimates for crops with specialized commodity agencies, the latest annual data, e.g. 2005, are considered preliminary.

III. Definition of Terms

The actual physical area planted to a particular crop. In crop statistics, this generally applies to area reported for permanent crops.

Area Planted	The actual physical area planted to a particular crop. In crop statistics, this generally applies to area reported for permanent crops.
Area Harvested	The actual physical area from where crops were actually harvested, excluding the areas where crops were totally damaged. The area harvested may be smaller than area planted. In crops statistics, this applies to temporary crops.
Agricultural Crop Production	The volume or quantity produced and harvested for a particular crop during the reference period. This includes the volume harvested but was damaged, stolen, given away, consumed, given as harvesters' share, reserved, etc. Excluded are those harvestable but not harvested due to low price, lack of demand and *force majeure* or fortuitous events.

Bearing Tree/Hill	The tree/hill that bore fruit and harvested in the past but may or may not have borne fruit during the reference period due to cyclical production pattern of the crop. Hills are applicable to banana.
Permanent/Perennial Crops	These are crops that occupy the land for a long time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. Examples are avocado, coffee, coconut and other fruit trees.
Temporary Crops	These are crops grown seasonally and whose life cycle is less than one year. These crops must be sown or planted again for production after each harvest.
Major Crops	The top 21 crops including palay and corn which collectively account for about 95 percent of the total agricultural crop production. These include banana, pineapple, mango, calamansi, abaca, sugarcane, coconut, coffee, rubber, camote, cabbage, cassava, eggplant, garlic, onion, tobacco, tomato, peanut and mongo.

Note: A blank space in the data tables means that no harvest was made for the crop in the province.

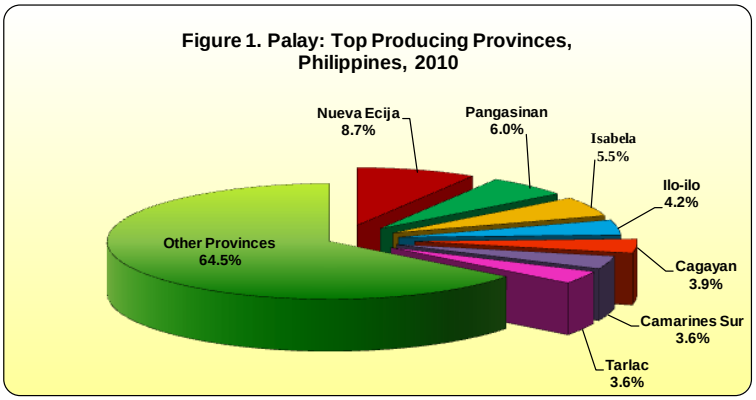
PRODUCTION / AREA / BEARING TREES

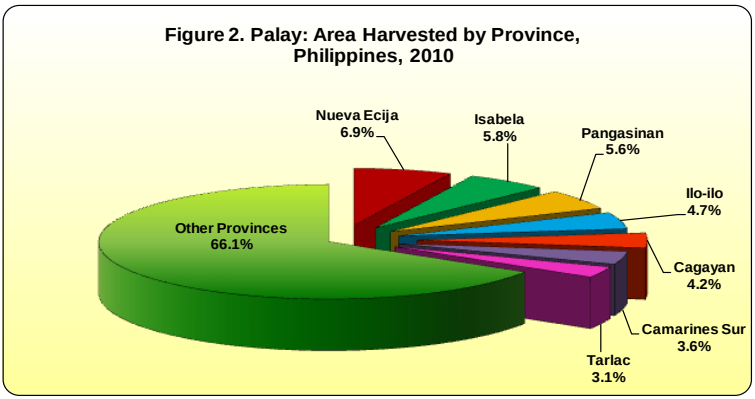
A. CEREALS

PALAY

Production of palay in the country grew from 15.327 million MT in 2006 to 15.772 million MT in 2010 or by an average annual growth of 0.80 percent. Production in 2010 was 3.0 percent lower than the 2009 output of 16.266 million MT. Area harvested expanded from 4.160 million hectares in 2006 to 4.354 million hectares in 2010 or by an average annual growth of 1.2 percent.

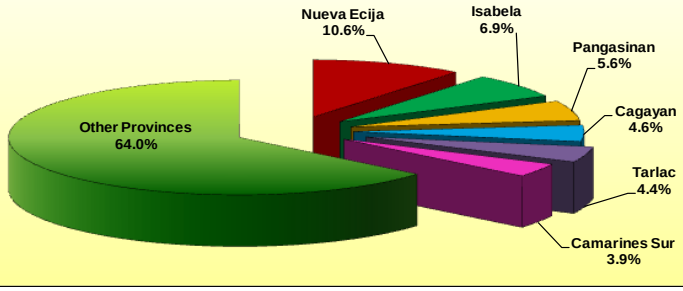


In 2010, Nueva Ecija, Pangasinan, Isabela, Iloilo, Cagayan, Camarines Sur and Tarlac were the country's top palay producing provinces. Combined production from these provinces was recorded at 5.588 million MT which accounted for 35.4 percent of the country's total palay production for the year (Figure 1). Area harvested in these provinces shared 33.9 percent in the national total (Tables 4 and 5).



Total output in irrigated palay areas was 11.992 million MT in 2010. The top producers were Nueva Ecija, Isabela, Pangasinan, Cagayan, Tarlac and Camarines Sur with an aggregate output of 4.320 million MT or 36.0 percent of the country's irrigated palay production (Figure3).

Figure 3. Irrigated Palay: Top Producing Provinces, Philippines, 2010



Total palay production in rainfed areas was 3.780 million MT. Maguindanao, Iloilo, Pangasinan, Capiz, Leyte and Negros Occidental were the top producers with total contribution of 35.7 percent to the rainfed palay production in the country (Figure 4).

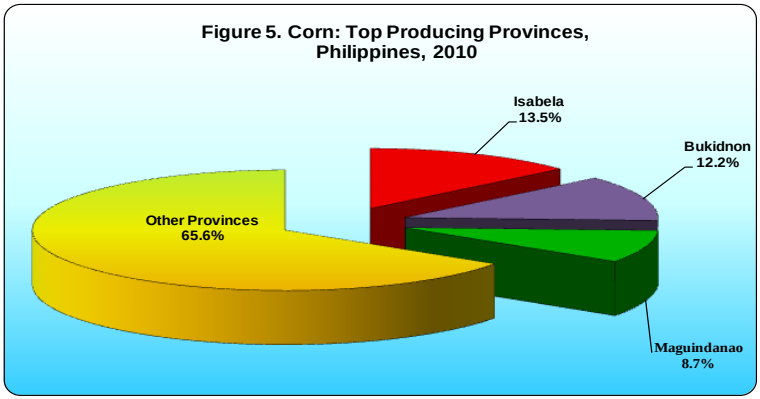
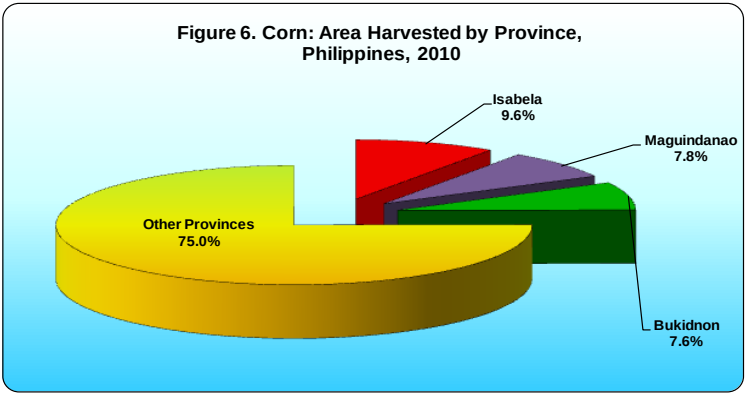
CORN

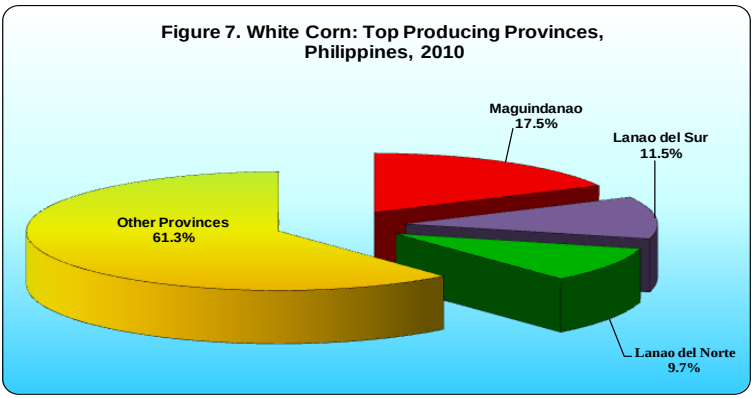
Corn production grew from 6.082 million MT in 2006 to 6.377 million MT in 2010 or by an average annual growth of 1.45 percent. On the other hand, area harvested contracted from 2.571 million hectares in 2006 to 2.499 million hectares in 2010 or by 0.63 percent annually.



In 2010, Isabela, Bukidnon and Maguindanao were the top corn producing provinces. Their respective shares to the country's total corn output were 13.5 percent, 12.2 percent and 8.7 percent (Figure 5). Isabela recorded the largest area harvested of 239 thousand hectares followed by Maguindanao with 194 thousand hectares and Bukidnon with 189 thousand hectares (Table 17).



In terms of white corn production, Maguindanao, Lanao del Sur and Lanao del Norte were the top producers with respective shares of 17.5 percent, 11.5 percent and 9.7 percent in the total white corn output in 2010 (Figure 7). Area harvested to white corn in Maguindanao was the largest at 148 thousand hectares and these accounted for 11.1 percent to the national total (Table 21).



For yellow corn, Isabela and Bukidnon were the top producers with shares of 19.8 percent and 16.9 percent, respectively, in the national output (Figure 8). Isabela recorded the biggest area harvested of 227 thousand hectares or 19.6 percent of the national total (Table 25).

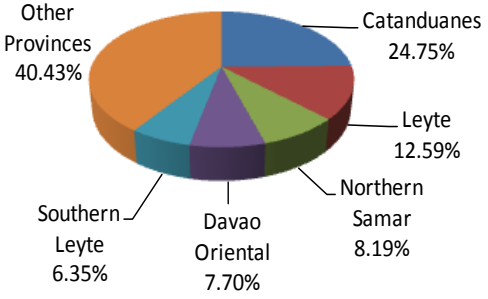
B. NON-FOOD and INDUSTRIAL CROPS

Provincial Highlights

ABACA

From 2006 to 2010, abaca production decreased by an average annual rate of 1.20 percent while area planted went down by 0.15 percent. In 2010, production was estimated at 66.51 thousand mt which was 1.04 percent higher than the 2009 record of 65.83 thousand mt (Table 26). Favorable weather and satisfactory price of abaca fiber enhanced harvesting in major producing regions such as Bicol Region and Eastern Visayas.

Figure 1. Abaca: Top Producing Provinces, Philippines, 2010



Catanduanes remained as the top abaca producer in 2010 with 24.75 percent share in the national output. The other major producing provinces and their shares in the national output were Leyte, 12.59 percent; Northern Samar, 8.19 percent, Davao Oriental, 7.70 percent; and Southern Leyte, 6.35 percent (Figure 1).

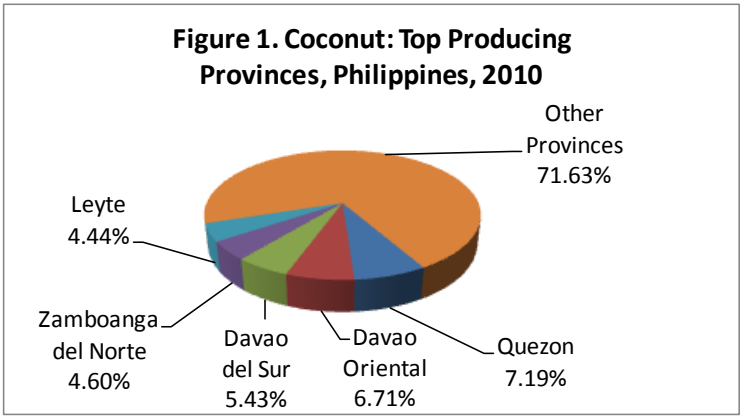
COCONUT

Coconut production from 2006 to 2010 went up by an annual average of 0.91 percent. In 2010, production reached 15.51 million mt which was 1.0 percent lower than the 15.67 million mt recorded in 2009 (Table 30). The decrease in output could be traced to the seven-month dry spell that started in October 2009 and the adverse effects of typhoon Juan that caused the falling of young nuts in Northern Luzon. From 2006 to 2010, area planted and number of bearing trees continued to increase annually by 1.74 percent and 0.41 percent, respectively (Table 31 and 32).



Quezon province was the leading coconut producer with 7.19 percent contribution to the total coconut production in 2010. The other major producers and their shares in total production were Davao Oriental, 6.71 percent; Davao del Sur, 5.43 percent; Zamboanga del Norte, 4.60 percent; and Leyte, 4.44 percent (Figure 1).

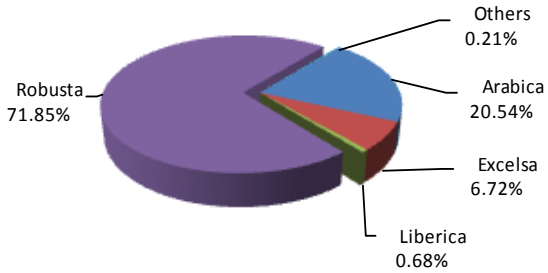
COFFEE

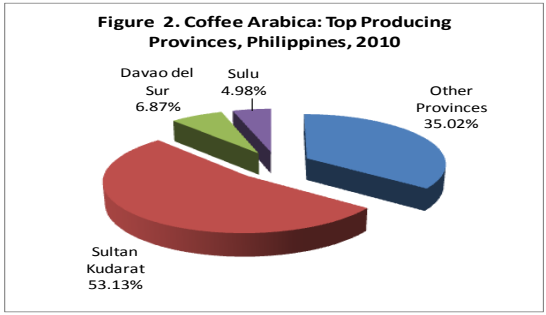
From 2006 to 2010, area planted to coffee decreased annually by 0.94 percent while the number of bearing trees dropped by 1.52 percent (Tables 36 and 37). Production also declined by an annual rate of 2.38 percent. In 2010, production of all coffee varieties was estimated at 94.54 thousand mt which was 1.97 percent lower than the 2009 production of 96.43 thousand mt (Table 35). These decreases were attributed to the cutting of trees due to land use conversion in Davao City and the effects of dry spell in Iloilo and Davao del Sur.

Figure 1. Coffee: Percent Contribution by Variety, Philippines, 2010



Arabica variety. Production of arabica variety was recorded at 19.42 thousand mt or 20.54 percent of the total coffee production in 2010 (Figure 1). Sultan Kudarat, the top producer, contributed 53.13 percent to the total arabica production in 2010 (Table 43). Area planted to arabica variety was 19.62 thousand hectares or 16.16 percent of the total area planted to coffee in 2010 at 121.40 thousand hectares.

Figure 2. Coffee Arabica: Top Producing Provinces, Philippines, 2010



Excelsa variety. In 2010, the production of excelsa variety was estimated at 6.35 thousand mt (Table 45). The major producers were Sulu, Compostela Valley, Davao del Sur, North Cotabato and Davao City with a combined share of 63.37 percent in the country's excelsa production in 2010 (Table 48). Batangas posted the largest area planted to excelsa at 1.69 thousand hectares or 17.67 percent of the total

Figure 3. Coffee Excelsa: Top Producing Provinces, Philippines, 2010

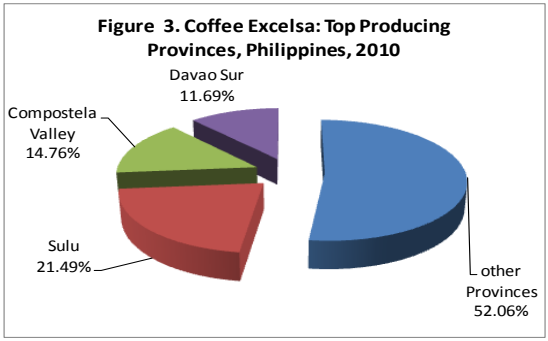


Figure 4. Coffee Liberica: Top Producing Provinces, Philippines, 2010

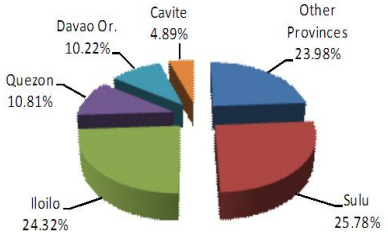
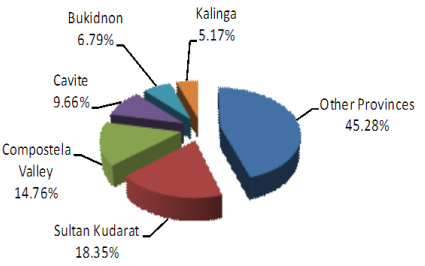


area planted to excelsa variety at 9.58 thousand hectares (Table 49).

Liberica variety. Production of liberica variety was 639 mt or 0.68 percent of the county's coffee production of all varieties of 94.54 thousand mt. The leading producers were Sulu, Iloilo, Quezon, Davao Oriental and Cavite which accounted for 76.02 percent of the country's liberica production in 2010 (Table 53). Sulu posted the largest area planted to liberica at 595 hectares or 42.21 percent of the total area planted to liberica at 1.41 thousand hectares (Table 54).

Figure 5. Coffee Robusta: Top Producing Provinces, Philippines, 2010



Robusta variety. Production of robusta variety was 67.93 thousand mt which was about 72.0 percent of the total coffee production in 2010 (Figure 1). Sultan Kudarat was the top producing province with 18.35 percent contribution to the total robusta production. Other major producers were Compostela Valley, Cavite, Bukidnon and Kalinga which accounted for 36.37 of the country's robusta production at 67.93 thousand mt (Table 58). Sultan Kudarat posted the largest area planted at 12.36 thousand hectares or 13.68 percent of the area planted to robusta at 90.32 thousand hectares (Table 59). Sultan Kudarat also reported the highest number of bearing trees at 9.06 million trees.

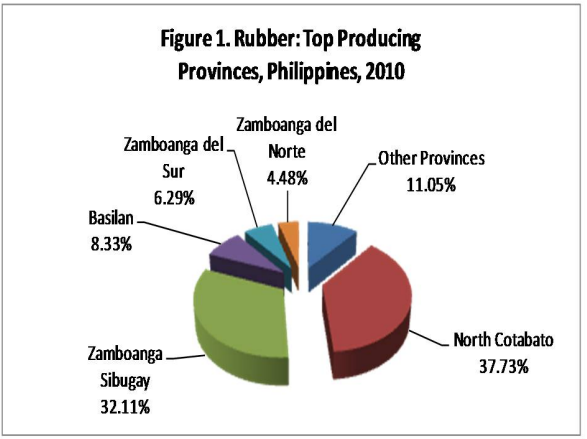
RUBBER

For the period 2006-2010, the average yearly growth of area planted to rubber was 10.11 percent and that of the number of mature trees was 6.92 percent. Production also increased by an annual rate of 2.97 percent. In 2010, rubber production reached 395.24 thousand mt which was 1.09 percent higher than the 2009 output of 390.96 thousand mt (Table 60).



The intense demand and prices during the 2nd half of 2010 induced more tappings in the top producing provinces of North Cotabato and Zamboanga Sibugay. The combined production of these two (2) provinces accounted for 69.84 percent of the country's rubber production in 2010 (Table 63).

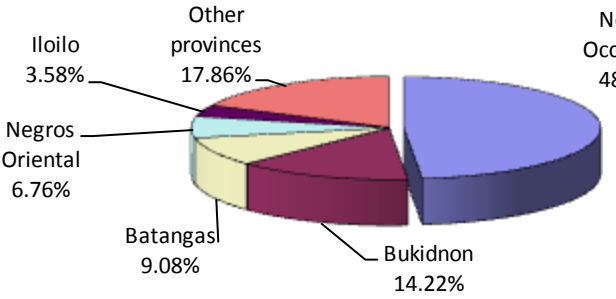
SUGARCANE

From 2006 to 2010, sugarcane production and area exhibited downward trends. Annually, production dropped by an average of 7.36 percent while area harvested decreased by an average of 2.47 percent. In 2010, production was 17.93 million mt (Table 65). This was 21.82 percent lower than the 22.93 million mt level in 2009. The decreases were attributed to the effects of dry spell during planting season.

Figure 1. Surgarcane. Top Producing Provinces, Philippines, 2010



Negros Occidental remained the largest producing province. It contributed 48.50 percent to the country's total sugarcane production and accounts for 41.90 percent of the total area harvested in 2010.

TOBACCO

From 2006 to 2010, output of tobacco all varieties increased by an average annual rate of 1.38 percent while area planted expanded by 3.07 percent yearly. In 2010, production of tobacco was recorded at 40.53 thousand mt which was 11.40 percent higher compared to the 36.38 thousand mt of production in 2009 (Table 69). The increase was attributed to crop shifting from corn and garlic due to assurance of market in the top producing provinces of Ilocos Norte and Ilocos Sur and the availability of technical and financial assistance from the National Tobacco Administration and the Universal Leaf Philippines Inc. in Isabela and Cagayan.

Figure 1. Tobacco: Top Producing Provinces, Philippines, 2010

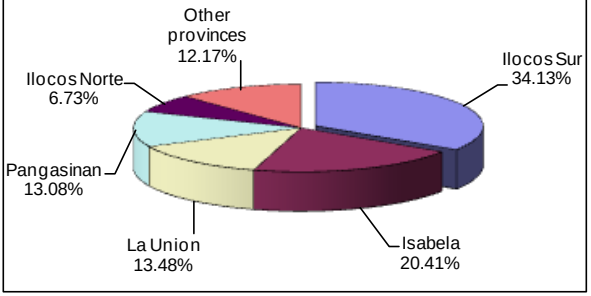

Figure 2. Tobacco: Percent Distribution by Variety, Philippines, 2010

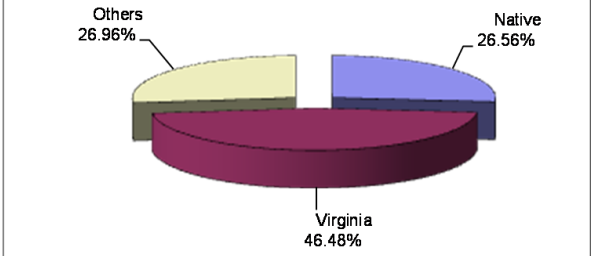

In 2010, production of Virginia variety was estimated at 18.84 thousand mt (Table 77). This was 13.64 percent higher compared to the 2009 output of 16.58 thousand mt. Ilocos Sur was the top producer with shares of 64.81 percent on production and 64.50 percent on area planted (Table 79 and 80). Production of native variety also increased to 10.77 thousand mt in 2010 from 10.42 thousand mt in 2009. Production of other varieties which were mostly Burley, was 10.93 thousand mt. It was higher by 16.36 percent from the 2009 output of 9.39 thousand mt.

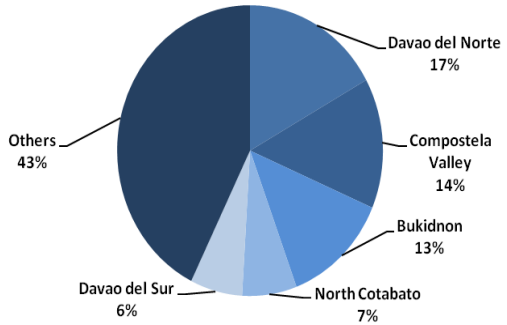
C. FRUIT CROPS

BANANA

At the national level, banana production grew by an average of 7.74 percent yearly during the period 2006 to 2010. From 6,795 thousand mt in 2006, it had gone up to 9,101 thousand mt in 2010 (Table 81). During the same reference years, area planted and number of bearing trees increased annually by 1.18 percent and 4.97 percent, respectively (Tables 82 and 83).

In 2010, banana production at 9,101 thousand mt, was 0.98 percent higher than the 2009 level. Davao del Norte, Compostela Valley and Bukidnon were the top producers; they accounted for 44 percent of the country's total banana production (Figure 1).

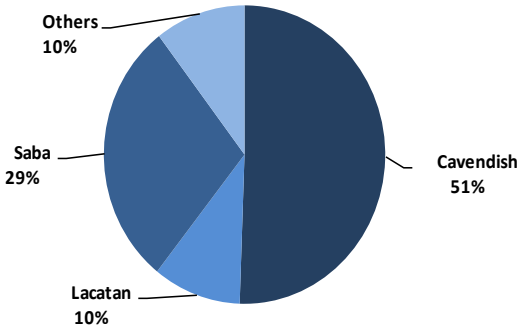
Figure 1. Banana: Top producing provinces, Philippines, 2010



Cavendish variety. Cavendish banana production in 2010 was 4,601 thousand mt. It was 2.29 percent higher than the 2009 record (Table 89). This variety accounted for 51 percent of the country's total banana production for all varieties (Figure 2). The increase in production was attributed to the additional area harvested in Bukidnon and Davao del Norte. The top producing provinces were Davao del Norte, Bukidnon and Compostela Valley with a combined share of 80 percent of the total Cavendish banana production (Table 89).

Davao del Norte posted the largest area planted at 28,664 hectares which accounted for 36 percent of the total area planted to Cavendish banana in 2010 (Table 90).

Figure2. Banana: Percent distribution of production by variety, Philippines, 2010



Lakatan variety. The 2010 production of lakatan banana at 922 thousand mt rose by 0.51 percent from the 2009 level (Table 94). North Cotabato, Lanao del Norte and Davao del Sur were the top producers in 2010; they accounted for 33 percent of the country's lakatan production.

In terms of area planted, Davao Oriental registered the largest area at 4,130 hectares then followed by Mindoro Oriental at 4,017 hectares (Table 95).

Saba variety. Production of saba banana in 2010 was recorded at 2,633 thousand mt which was 0.14 percent lower than the 2009 level (Table 96). Saba production accounted for 29 percent of the total banana production (Figure 2). Davao del Sur and North Cotabato were the top producers (Table 99).

Mindoro Oriental registered the largest area planted to saba variety at 9,917 hectares in 2010 (Table 100).

CALAMANSI

During the reference years, 2006-2010, calamansi production dropped by an average 1.04 percent (Table 100). Area planted and number of bearing trees, however, increased by 0.90 percent and 0.79 percent, respectively (Table 101).

In 2010, calamansi production was 188 thousand mt which was 2.00 percent less than the 2009 level. The decrease was due to the effects of El Niño. Mindoro Oriental remained as the top producer and it accounted for 58 percent of the country's calamansi production (Figure 1). The province also registered the largest area planted to calamansi at 7,323 hectares (Table 105).

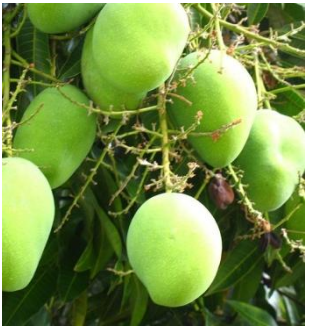
MANGO

Mango production from 2006 to 2010 went down annually by 1.99 percent. Area planted and number of bearing trees increased by 2.52 percent and 2.12 percent, respectively (Table 106).

In 2010, mango production at 826 thousand mt grew by 7.03 percent from the previous year's level (Table 106). Pangasinan was the top mango producer and it accounted for 29 percent of the country's total production (Figure 1). The province also recorded the largest area planted at 13,823 hectares (Table 110).



Mango, Carabao variety. In 2010, Carabao mango production was recorded at 670 thousand mt which was higher by 7.76 percent compared to the 2009 record (Table 111). This variety shared 81 percent of the country's mango production (Figure 2). Pangasinan remained the top producer which shared 33 percent of the Carabao mango production (Table 114).

Davao del Sur registered the largest area planted at 12,305 hectares in 2010 (Table 115).

PINEAPPLE

Pineapple production grew by an average of 4.42 percent per year during the period 2006 to 2010 (Table 116). Area planted also increased by 4.20 (Table 117).

Production in 2010 at 2,169 thousand mt dropped by 1.33 percent from the 2009 level. The reduction in production was due to the effects of dry spell in the first half of the year. Bukidnon and South Cotabato were the top producing provinces; they had a combined share of 82 percent in the national pineapple production (Figure 1).

D. VEGETABLES ROOTCROPS & TUBERS

CABBAGE

In 2010, the country produced 129 thousand mt of cabbage which was 3.4 percent higher than last year's production of 125 thousand mt. Seventy nine (79) percent of this production came from the Cordilleras. Benguet, the largest producer, harvested 88.8 thousand mt or 69 percent of the country's total output (Figure 1). Benguet also accounted for 52 percent of the country's total harvest area in 2010 (Figure 2). Mt. Province was the second largest producer with the total output of13.0 thousand mt and harvest area of 964 hectares.

SWEET POTATO

Leyte was the leading producer of sweet potato in 2010 as well as in the previous years. The province produced 62 thousand mt or 12 percent of the country's total sweet potato production in 2010 (Figure 1). The average yield in the province for the past five (5) years was 13.5 mt per hectare. This was way above the yield in other top producing provinces which ranged from 3.5 to 9.6 mt per hectare. In terms of area harvested, Camarines Sur recorded the highest at 8.6 thousand hectares or 8.0 percent of the country's total harvested area (Figure 2).

CASSAVA

Lanao Sur, Bukidnon, Basilan, Sulo and Misamis Oriental were the largest cassava producers in 2010 (Figure 1). The combined cassava output in these provinces reached 1.3 million mt representing 62.2 percent of the country's total production. Lanao Sur ranked first in terms of production and area harvested in 2010 (Figure 2).. The other top cassava producing provinces were Tawi-tawi, Camarines Sur and Bohol.

EGGPLANT

2010, the total eggplant production was 208.2 thousand mt. Pangasinan, Quezon and Iloilo were the top three (3) producers with registered shares of 30 percent, 14 percent, and 5 percent, in the country's total eggplant production (Figure 1). Pangasinan had the largest harvest area of 3.7 thousand hectares. Nueva Ecija recorded 1.5 thousand hectares and Cebu had 943 hectares (Figure 2). The average yield of eggplant farms in Luzon provinces was 11.6 mt per hectare. In Visayas and Mindanao provinces, average yields were 6.8 and 6.0 mt per hectare, respectively.

GARLIC

In 2010, about 99.6 percent of the country's garlic output were produced in Luzon. The remaining 0.4 percent was sourced from Western and Eastern Visayas. Ilocos Norte, the top producer, contributed 6.0 thousand mt or 66 percent of the country's total garlic production in 2010. Mindoro Occidental and Nueva Ecija were the second and the third largest producers, respectively (Figures 1 & 2). The country's total production in 2010 recorded an 8.5 percent decrease vis-a-vis the 2009 level. After a minimal gain in 2008 from its 2007 level, garlic production showed continuous downtrend from 2009 to 2010.

MONGO

Ilocos Region remained the top mongo producer in 2010 with an output of 11.1 thousand mt. Most of the region's production came from Pangasinan which shared 19 percent of the country's total produce (Figure 1). The region's output accounted for 41.2 percent of total mongo production in 2010. In terms of area harvested, Isabela had the largest at 8.5 thousand hectares or 21 percent; followed by Ilocos Norte, 5.4 thousand hectares (13 percent); and Maguindanao, 4.5 thousand hectares (11 percent) (Figure 2). In terms of yield, however, Pangasinan recorded the highest at 1.2 mt per hectare followed by Ilocos Norte at 0.9 mt per hectare.

ONION

Nueva Ecija, the leading onion producer, contributed 74.7 thousand mt or 55 percent to the country's total output and 54 percent to the total area harvested in 2010 (Figure 1 & 2). The other top onion producers were Ilocos Norte, 18.5 thousand mt; Ilocos Sur, 16.1 thousand mt; Mindoro Occidental, 14.8 thousand mt; and Pangasinan, 7.4 thousand mt. In terms of yield, however, Ilocos Sur registered the highest at 9.4 mt per hectare. This was followed by Pangasinan at 9.2 mt per hectare and Nueva Ecija at 9.1 mt per hectare.

PEANUT

Pangasinan was consistently the top producer of peanut. In 2010, the province produced 6.3 thousand mt, representing 21 percent of the country's peanut production (Figure 1). La Union ranked second with production of 3.0 thousand mt or 10 percent of the national output. Pangasinan also accounted for the largest area harvested of 3.5 thousand hectares or 13 percent of the country's total area harvested. La Union ranked second with 2.1 thousand hectares or 7 percent share in the national total. Iloilo recorded the third largest area harvested of 1.8 thousand hectares or close to 7 percent of the country's area harvested (Figure 2).

TOMATO

Bukidnon, the top tomato producing province recorded an output of 39.1 thousand mt in 2010 or 19 percent of the national total (Figure 1). Ilocos Norte was second with 27.4 thousand mt, followed by Ilocos Sur with 22.0 thousand mt. Area harvested was largest in Bukidnon at 2.0 thousand hectares or 11 percent of the country's total area. This was followed by Tarlac at 1.5 thousand hectares or 8 percent; while Nueva Ecija had 1.4 thousand hectares or 8 percent of the country's total area harvested to tomato (Figure 2). In terms of yield, however, Ilocos Norte recorded the highest at 20.1 mt per hectare. Bukidnon ranked second with an average yield of 20.0 mt per hectare followed by Ilocos Sur with an average yield of 18.8 mt per hectare.
