FOREWORD

Since 1960 the National Statistical Office has been producing the Statistical Yearbook of Mongolia that shows main economic and social indicators in comparison with the previous years. In correspondence with the social and economic in the country the extent and framework of indicators for the yearbook have been expanding.

Since the transition period to a market economy and effort has been taken to comply statistical indicators to the common international standards. Within this effort the National Accounting System is being introduced and GDP indicators and estimate are being updated.

In order to expand the frame of users and achieve user-friendliness the explanation and description of methodologies and definitions for main indicators are included at the beginning of each chapter. Following this principle, the 2003 Statistical Yearbook contains some updated explanations and descriptions and presents indicators such as domestic trade, restaurants and hotels, population's life expectancy, price index of key construction commodities, number of agricultural professionals, livestock fences, their capacity, number of water points and technique, material and price index of foreign trade, register, number of temples and churches, number of employees. In addition, it contains some new indicators like monks, number of students in temple by age and number of children with home tuition by age.

Besides the Statistical Yearbook publications such as Statistical Book "Mongolia in Market Economy 1998-2002, The Mongolian Population in the 20th Century, monthly bulletins and brochures showing the socio-economic situation of the country, and reports of large scale sample surveys and census are presented to the public. Also, users can access the other data from our website.

We appreciate comments and suggestions from our users about how to improve our statistical yearbook and its indicators to the following address:

CONTENTS

Preface 3
Contents 6

SECTION 1. ADMINISTRATIVE UNITS, TERRITORY AND CLIMATE 19
1.1 *Administrative units* 22
1.2 *Distance between aimag center and Ulaanbaatar* 24
1.3 *Mountains* 25
1.4 *Rivers* 25
1.5 *Lakes* 25

MAIN INDICATORS 26

SECTION 2. POPULATION 27
2.1 *Resident population, at the end of the year* 32
2.2 *Resident population, by age group and sex* 32
2.3 *Resident population, by aimags and the Capital, at the end of the year* 33
2.4 *Persentage of resident population, porportion of urban and rural, by aimag and Capital, at the end of the year* 34
2.5 *Number of households, by aimags and the Capital, at the end of the year* 35
2.6 *Number of households, by aimags and the Capital, urban and rural, at the end of the year* 36
2.7 *Number of orphan children, by aimags and the Capital, at the end of the year* 37
2.8 *Number of single parent children, by aimags and the Capita, at the end of the year* 38
2.9 *Number of households with 4 and more children aged below 16, by aimags and the Capital, at the end of the year* 39
2.10 *Number of female-headed households, by aimags and the Capital, at the end of the year* 40
2.11 *Single women, with children aged below 16, by aimags and the Capital, at the end of the year* 41
2.12 *Births, deaths, marriages, divorces* 41
2.13 *Births, deaths, marriages, divorces, per 1000 population* 42
2.14 *Birth rates* 42
2.15 *Births, deaths, marriages, divorces, by aimags and the Capital, in 2003* 43
2.16 *Births, deaths, marriges, divorces, per 1000 population, by aimags and the Capital, in 2003* 44
2.17 *Life expectancy at birth, by aimags and Capital, in 2000 to 2003* 45
2.18 *Life expectancy at birth, by sex, in 2000 to 2003* 45
2.19 *Number of births sex, by aimags and the Capital, urban and rural, in 2003* 46
2.20 *Number of live births, by mother's age group* 46
2.21 *Number of women who give births, by aimags and the Capital, at the end of the year* 47
2.22 *Women who give births, by education level* 47
2.23 *Number of women who give births, by aimags and the Capital, urban and rural, in 2003* 48

2.24 *Crude birth rate, by aimags and the Capital* 49
2.25 *Number of people died, by educational level, at the end of the year* 49
2.26 *Crude death rate, by aimags and the Capital, at the end of the year* 50
2.27 *Number of people died, by age group* 51
2.28 *Number of people died, by aimags and the Capital, urban and rural, sex, in 2003* 52
2.29 *Age specific death rate* 53
2.30 *Registered marriages, by sex and age group, at the end of the year* 53
2.31 *Divorce, by duration of marriage, at the end of the year* 54
2.32 *Adoption, by child age group, at the end of the year* 54

SECTION 3. LABOUR FORCE **57**
3.1 *Employment, at the and of the year* 62
3.2 *Employees, by divisions, at the and of the year* 63
3.3 *Economically active population, by aimags and the Capital, at the and of the year* 64
3.4 *Employees, by aimags and the Capital, at the and of the year* 65
3.5 *Unemployment, by aimags and the Capital, at the and of the year* 66
3.6 *Unemployment rate, by aimags and the Capital, at the end of the year* 72
3.7 *Average wages and salaries, by divisions, by fourth quarter of each year* 74
3.8 *Average wages and salaries, by type of enterprise, by fourth quarter of each year* 74

SECTION 4. GROSS DOMESTIC PRODUCT **75**
4.1 *Gross domestic product, by industries, at current prices* 82
4.2 *Gross domestic product, by industries, at 1995 prices* 83
4.3 *Gross National Income* 84
4.4 *Industrial composition of GDP, at current prices* 84
4.5 *Annual change of gross domestic product, by industries* 85
4.6 *Composition of GDP, by expenditure approach* 86
4.7. *Private sector share in GDP, at current prices* 86
4.8. *Aimag's share in GDP, at current price* 87

SECTION 5. CONSUMER PRICE INDEX **88**
5.1 *Consumer price index of certain goods and services, by groups, 1991-I-16=100* 91
5.2 *Consumer price index of certain goods and services, by groups* 91
5.3 *Consumer price index of certain goods and services, by groups* 92
5.4 *Annual average prices of main goods and services, in Ulaanbaatar* 94
5.5 *Consumer price index, by aimags, 2000-XII=100* 96
5.6 *Annual average price of main selected goods, by aimags* 97

SECTION 6. MONEY, LOAN, STOCK **99**
6.1 *Money supply, end of the year* 102
6.2 *Loans oustanding, by commercial banks, at the endof the year* 102
6.3 *Deposit and loan rate* 103
6.4 *Loans oustanding, by aimags and the capital, at the end of the year* 104
6.5 *Non-performing loans oustanding, by aimags and the capital, at the end of the year* 105

6.6 *Individual deposits, by aimags and the Capital, at the end of the year* 106
6.7 *Stock market summary* 107
6.8 *25 leading companies in market capitalization in 2003* 108
6.9 *30 companeis with the most active traded stocks in 2003* 109

SECTION 7. BUDGET **110**
7.1 *Mongolian general government revenue, at current prices* 113
7.2 *Mongolian general government expenditure, by economic classification, at the current prices* 114
7.3 *Mongolian general government expenditure, by functional classification* 114
7.4 *Revenue of local government, at current prices* 115
7.4 *Expenditure of local government, at current prices* 116
7.6 *Subsidies from the general government to local government, at current prices* 117
7.7 *Revenue and expenditureof central governmen, at current prices* 118

SECTION 8. INVESTMENT AND CONSTRUCTION **120**
8.1 *Investment, at current prices* 123
8.2 *Total amount of construction and capital repair,maintanence for exploitation basic fund, at current prices* 123
8.3 *Structure of construction and maintanence capital repair done by construction units* 123
8.4 *Total construction and capital repair done by domestic and foreign construction organizations, by aimags and the Capital, at current prices* 124
8.5 *Grouping construction units* 124
8.6 *Average price of main building materials* 125

SECTION 9. AGRICULTURE **126**
9.1 *Gross agricultural output* 131
9.2 *Output of main agricultural products* 131
9.3 *Main agricultural production per capital* 132
9.4 *Number of livestock & domestic animals* 132
9.5 *Number of livestock, by type, aimags and the Capital, at the end of the year* 133
9.6 *Number of breeding stock, by type, aimags and the Capital, at the end of the year* 139
9.7 *Highest number of livestock* 140
9.8 *Number of freshbred, grossbred, thoroughbred livestock, by type, at the end of the year* 140
9.9 *Rearing of young animals, by type, at the end of the year* 141
9.10 *Losses of adult animals, by type, at the end of the year* 141
9.11 *Total livestock slaughtered for consumption, by type, at the end of the year* 142
9.12 *Rank of first five aimags and soums by number of livestock, by 2003 livestock census* 143
9.13 *Number of herdsmen households, by aimags and the Capital, at the end of the year* 145
9.14 *Grouping of households, by number of private livestock* 145
9.15 *Number of herdsmen, by aimags and the Capital, at the end of the year* 146
9.16 *Age of composition of herdsmen* 146
9.17 *Selected social indicators of herdsmen households* 147
9.18 *Selected social indicators of herdsmen households, by aimags and the Capital, in 2003* 147
9.19 *Nimber of agricultural specialists and techniques* 147
9.20 *Number of livestock fence, capacity, by type* 148

9.21 *Number of wells, by type, at the end of the year* 149
9.22 *Agricultural areas* 149
9.23 *Sown areas, by aimags and the Capital, by type* 150
9.24 *Total crops* 155
9.25 *Yields of staple agriciltural crops per hectare, by type* 155
9.26 *Total crops, by aimags and the Capital, by type* 156
9.27 *Yields of per hectare staple agricultural crops, by aimags and the Capital* 158
9.28 *Gross hay harvest and laying-in of fodder, by type* 159
9.29 *Gross hay harvest and laying-in of fodder, by aimags and the Capital, by type* 159

SECTION 10. INDUSTRY **163**
10.1 *Gross industrial output, by divisions, at current prices* 166
10.2 *Composition of gross industrial output, by divisions and subdivisions* 167
10.3 *Gross industrial output, by divisions and subdivisions, at constant prices of 1995* 168
10.4 *Sales of industrial product, aimags and teh Capital, at current prices* 169
10.5 *Output of selected industrial commodities* 170
10.6 *Value added per employee in industry, by divisions and subdivisions, at 1995 prices* 172
10.7 *Balance sheet of electricity* 173
10.8 *Balance sheet of coal* 176
10.9 *Balance of thermal energy* 177

SECTION 11. TRANSPORTATION **178**
11.1 *Main indicators of transport* 183
11.2 *Number of vehicles, by type, at the end of the year* 183
11.3 *Number of vehicles, by aimags and the Capital* 184
11.4 *Selected indicators of railway, at the end of the year* 186
11.5 *Railway length per 1000 km2 territory and freight turnover, carried freight per 1 km railway length* 186
11.6 *Selected indicators of civil air transport, at the end of the year* 186
11.7 *Improved auto road, at the end of the year* 186

SECTION 12. COMMUNICATION **187**
12.1 *Main indicators of communication, at the end of the year* 190
12.2 *Communication service indicators, by kind, at the end of the year* 190
12.3 *Number of telephones and radio outlets, at the end of the year* 191

SECTION 13. FOREIGN TRADE **192**
13.1 *Total turnover, by countries, at current prices* 197
13.2 *Exports, by countries, at current prices* 198
13.3 *Imports, by countries, at current prices* 199
13.4 *Export and import, by region, at current prices* 200
13.5 *Main export commodities* 201
13.6 *Main import commodities* 202
13.7 *Exports, by groups of commodities* 206
13.8 *Import, by groups of commodities* 207
13.9 *Price indexes of Foreign Trade, by groups of commodities* 208
13.10 *Volume indexes of Foreign Trade, by groups of commodities* 209
13.11 *Indexes of Foreign Trade and Terms of trade* 210

SECTION 14. DOMESTIC TRADE **211**
14.1 *Total output of trade, hotel and restaurant, at current price* 214

SECTION 15. HOUSING, COMMUNITY SERVICE **215**
15.1 *Housing* 218
15.2 *Number of facilities for community service, by aimags and the Capital* 219

SECTION 16. THE TOURISM **221**
16.1 *Inbound and outbound passengers* 224
16.2 *Inbound and outbound passengers, by purpose of visit, as of 2003* 225
16.3 *Number of arrivals and departures through the border of Mongolia, by country* 226
16.4 *Arrivals of passengers from abroad, by geographical region, at the end of 2003* 226
16.5 *Outbound passengers, as of 2003* 227

SECTION 17. HOUSEHOLD INCOME AND EXPENDITURE **228**
17.1 *Monthly average total and monetary income per household, at the current price* 231
17.2 *Composition of monthly average total and monetary income per household* 231
17.3 *Monthly average expenditure per household, at current price* 232
17.4 *Composition of monthly average expenditure per household* 232
17.5 *Monthly average monetary expenditure per household, at current price* 234
17.6 *Composition of monthly average monetary expenditure per household* 235
17.7 *Monthly foodstuff consumption per adult equivalent* 236
17.8 *Calorie and composition of daily foodstuff consumption per adult equivalent* 236
17.9 *Minimum subsistance level, by region 2001-2003* 237
17.10 *Poverty Indicators* 237

SECTION 18. EDUCATION, SCIENCE, CULTURE AND ARTS **238**
18.1 *Number of schoolof all levels* 243
18.2 *Number of pupils and students in educational institutions at the biginning of the academic year* 243
18.3 *Some indicators of primary and secondary school at the beginning of the academic year* 244
18.4 *Number of pupils and students in educational institutions, per 1000 population* 245
18.5 *Students and graduates of domestic high educational institutionas, by professionals* 246
18.6 *Number of primary and secondary schools, by aimags and the Capital* 247
18.7 *Number of pupils in primary and secondary schools, by aimags and the Capital* 248
18.8 *Proportion of teachers pupils in primary and secondary school, by aimags and the Capital* 249
18.9 *Number of teachers in primary and secondary schools, by aimags and the Capital* 250
18.10 *Pre-school institutions and number of children* 251
18.11 *Number of children in kindergartens, by aimags and the Capital* 251
18.12 *Main characteristics of scientific research institut* 252
18.13 *Public libraries, at the end of the year* 252

18.14 *Performance of professional art's organization, spectators* 253
18.15 *Exhibit of museum, number of visitors* 254
18.16 *Temples, by aimags and the Capital, at the end of the year* 255
18.17 *Number of apprentices, by aimags and the Capital, at the end of the year* 256

SECTION 19. HEALTH **257**
19.1 *Health institutions* 260
19.2 *Number of hospital beds, by type* 260
19.3 *Employees of health organizations, by specialization categories* 261
19.4 *Number of physicians and pharmacists, by aimags and the Capital* 262
19.5 *Number of mid- level health personnel, by specialization* 263
19.6 *Number of persons per physician, by aimags and the Capital* 263
19.7 *Number of persons per nurse, by aimags and the Capital* 264
19.8 *Number of patients hospitalized, by aimags and the Capital* 265
19.9 *Registered main patients with infectious diseases* 266
19.10 *Number of live births, by sex, weight, gramm, by aimags and the Capital, in 2003* 267
19.11 *Leading causes of deaths, by sex* 268
19.12 *Infant mortality rate (per 1000 live births), by aimags and the Capital* 269
19.13 *Number of maternal deaths, by aimags and the Capital* 270
19.14 *Abortions, by aimags and the Capital* 271
19.15 *National health expenditures* 271
19.16 *Income and expenditure of social welfare services for the state budget* 272
19.17 *Number of pensions who received social welfare services, by type* 273
19.18 *Pension provided by the social insurance fund by type of pension and by involvement of pensioners, at the end of the year* 273

SECTION 20. CRIME **274**
20.1 *Number of offences committed* 277
20.2 *Number of offences committed*** 278
20.3 *Number of persons sentenced* 278
20.4 *Number of offences committed, by aimags and the Capital* 279
20.5 *Number of persons sentenced, by aimags and the Capital* 280
20.6 *Number of offences per 10000 population of age 18 and above* 280

SECTION 21. NATURE AND ENVIRONMENT **281**
21.1 *Annual average temperature, by aimags and the Capital* 286
21.2 *Land classification of Mongolia, thous. Hectares, 2003* 287
21.3 *Life forms of vascular plants, 1989* 287
21.4 *Number of days with rainfall, by aimags and the Capital* 288
21.5 *Climate, by aimags and the Capital* 289
21.6 *Number of forest fires, /by times/, by fire affected aimags and the Capital* 290
21.7 *Forest harvest voluem, thou.m3, by aimags and the Capital* 291
21.8 *Capital investment for protectoin and rehabilitation of natural resources, 2000-2002* 292
21.9 *Maximum limit of hunting wild animals for domestic purpose, 2004, by aimags* 292
21.10 *Composition of vascular and lower plants of Mongolia, 1998* 293

SECTION 22. BUSINESS REGISTER **294**
22.1 *Number of legal units, by aimags* 297
22.2 *Number of legal units, by sectors of economic activities* 298
22.3 *Number of legal units, by employment size class* 299
22.4 *Number of active legal units, by aimags* 299
22.5 *Number of active legal units, by sectors of economic activities* 300
22.6 *Number of active legal units, by employment size class* 300

SECTION 23. WORLD DEVELOPMENT INDICATORS **301**
23.1 *Social indicators* 304
23.2 *Percentage share of final consumption expenditure to GDP, by region* 305
23.3 *Total population, population living on less than $ 1 a day in developing regions* 305
23.4 *Growth of merchandise trade* 306
23.5 *Aid defendency* 310
23.6 *Size of economy* 314
23.7 *Quality of life* 322
23.8 *Development progress* 330

1. ADMINISTRATIVE UNITS, TERRITORY

Mongolia is administratively divided into 21 aimags(provinces) and the capital city Ulaanbaatar. Aimags are divided into soums which are further divided into baghs. The capacity city is divided into districts which in their turn are divided into khoroos.

The state and administration system is composed of Local Representatives 'Meeting in the capital city, aimags, soums and districts and Citizens' Meeting in bahgs and khoroos.

Based on the principle of democracy, justice, equality and peace the administration organizes and manages social and economic issues through combined state administration and self-governing rules in their respective territories.

The territory of Mongolia is located in the central part of Asia between 41° 35"-52° 06" of altitude and 87° 47"-119° 57" of longitude, neighbouring with Russia along 3485 km in the north and with China 4676.9 km in the south. Mongolia comprises 1564.1 thousand square km of land. It is 2392 km from west to eastern frontier and 1259 km from north to southern frontier.

Average altitude is 1580 m above sea level. The highest point is the Huiten Peak(4653 m) in the west and the lowest is the Khukh Nuur Depression in the east(532 m). The capital city is 1350 m above sea level. Mongolia is the seventeenth largest country in the world by its size of territory.

There are many rivers and lakes. Khuvsgul lake is 262.4 m deep hence ranking after Baigal lake in the territory of the Russian Federation.

The climate of Mongolia is continental with four seasons. Strong storms blow during the short spring(April to May). January is the coldest month when temperature drops to the lowest point and July is the hottest month of the year.

2. POPULATION

At the end of 2003, resident population of Mongolia stood at 2504.0 thousand. Currently, 49.6 percent of the population are male and 50.4 percent are female. In 2002, the percentage of population aged under 15 years was 32.6, aged 15-64 years was 63.9 and aged 65 years and over was 3.5.

This section presents population growth of Mongolia, age and sex distribution of the population, and vital statistics (births, deaths, marriages and divorces).

The main sources of the population statistics is the Population and housing census conducted by the National Statistical Office of Mongolia in every 10 years. The resident population, the vital and migration statistics are considered as a yearly population statistics.

Population estimates - *The population is estimated every year based on the results of the last Population and housing census, on number of resident population, and on vital and migration statistics. In the estimation of yearly population, decentralized statistics are compiled from the following organizations in addition to the centralized statistical data. These include Office of Immigration Naturalization and Foreign Citizens (number of foreign officials and officers who live in Mongolia), Ministry of Defense (number of soldiers and military), The Central Department of Judgement Implementation (number of prisoners), Ministry of Foreign Affairs (number of Mongolian diplomats and citizens living in foreign countries more than 183 days) and Ministry of Health (number of infant mortality).*

Resident population *– Number of population, living in current place of residence for more than 6 months / 183 days/.*

Household *- A single person or two or more persons who make common provision for food and other essentials, such as pooling of income. Household members may be related or unrelated.*

Urban population *- The urban share comprises of population of aimag centers, capital city and village population*

Rural population *– Rural share is estimated from the population of soum centers and (provincial) bags.*

Sex ratio at birth *- Sex ratio at birth is calculated by dividing the number of female births by the number of male births.*

Sex ratio at death *- Sex ratio at death is calculated by dividing the number of female deaths by the number of male deaths.*

Married *- Registered marriage in accordance with the "Law on marriage" of Mongolia.*

Divorced *- Registered divorce by court resolution.*

Adoption *– Adoption is considered taken place when the adopter has registered the adoption at the Civil Marital Office and obtained a certificate.*

Vital statistics *- Include births, deaths, marriages, divorces and adoptions of a child. Every event is registered at civil registration office of districts or soums, then statistical*
divisions of aimags (province) and Ulaanbaatar city compile and send them to the National Statistical Office. Civil registration system was established in Mongolia in 1951.

3. LABOUR FORCE

In 2003, number of employed persons were 926.5 thousand. This represents an increase of 6.4% compared with 2002. Labour force participation rate was 64.5 percent. According to Employment office unemployment rate was 3.5 percent.

This section presents indicators like working age population, labour force and unemployment. The chief source of these data is annual labour force data (survey conducted by the National Statistical Office) compiled by the National Statistical Office and some related sample surveys.

Data on Labour force is compiled by governors of the administrative unit based on households records as of January 15 each year. Monthly data on unemployment is collected by the Employment Offices at the capital city and aimags and compiled by the National Statistical Office.

Economically active population *comprises all employed and unemployed registered in the Employment Offices as International Labour Organization methodology requires. Two useful measures of the economically active population are usually active population measured in relation to a long reference period such as a year, and the currently active population, or, eguivalently, the labour force measured in relation to a short reference period such as one day or one week. The economically active population does not include: - unemployed persons, not registered at the Employment Office, serving at armed forces, prisoners, pupils and students aged 16 and over. In this section the economically active population is defined as "usually active".*

Employed persons *comprise (a) all civilians, who, did any work for pay or profit, unpaid workers in a family enterprise, and (b) all civilians who were not working or temporarily absent from jobs or businesses for noneconomic reason (illness, weather conditions, vacations, etc.). In this section the number of employed persons is defined as "usually active".*

***Unemployed**, are those segments of the population in the working age who are currently not involved in a paid or self-employed job and actively looking for job and registered at the Employment Office according to the International Standard Methodology.*

***Unemployment rate** is the proportion of the number of unemployed persons, registered in the Employment Office to the economically active population.*

***Labour force participation rate** is the proportion of labour force to population of working age.*

***Employment population rate** is the proportion of the number of employed persons to the population of working age.*

The present yearbook has not included employees who work in abroad by contract and diplomat purposes. Therefore, employment size of the previous yearbooks was changed.

4. GROSS DOMESTIC PRODUCT

The Gross Domestic Product (GDP) in 2003 at 1995 prices increased by 5.5 per cent over previous year. Per capita GDP (at current prices) has reached 547.2 thousand togrogs.

The primary data sources for Gross Domestic Product and Gross National Income are the estimates of annual value added of different economic activities. These estimates are based on data collected from establishments, organizations by official statistics.

From 1995 GDP estimation has revised by the ISIC.

Gross Domestic Product *is a sum of value added produced by all domestic and foreign units resident in the economy or sum of final products during one year period.*

Output *consists of those total goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.*

Value added *is a total output less intermediate consumption.*

Intermediate consumption *is a value of goods and services inputted the production process. It consists of inventories (excluding depreciation of fixed assets), value of goods and services provided by Sub-contracts and business expenses.*

Gross National Income *shows total gross value added produced by all economic residents of the country.*

GNI is equal to GDP less factor income produced by foreign institutional units plus factor income produced by the national units resident abroad.

The "linking index" approach was used for rebasing of Gross Domestic Product and Gross National Income at 1995 prices. This "linking index" approach could be seen in the publication "System of National Accounts 1993" developed jointly by five international organizations and approved in 1993.

The percentage share of GDP by kind of activities is shown in current prices, however the annual change is estimated in real terms.

GDP by expenditure approach *describes where and how has distributed the income that are produced by all units in the particular year.*

GDP by expenditure approach derives by adding up final consumption expenditure, gross fixed capital formation, net export. Each of it comprises of subcases such as final consumption – household final consumption, government final consumption, consumption of non-profit institutions serving households, gross fixed capital formation – investment, work in progress of construction, capital repair work, livestock that are cultivated for the products, durable goods

purchased by households, furniture purchased by the government, mineral exploration which funded by government, inventories, valuables, net export – export less import on goods and services.

***Recent Developments in Methodology**. A revision made in the GDP compilation methodology concerning the treatment of extraordinary losses of animals that occurred in 2000-2002 due to DZUD, which is recognized as a multiple disaster, the cumulative result of a summer drought and an extremely harsh and cold winter that follows soon thereafter.*

The National Statistical Office and the Ministry of Finance and Economy adopted a Joint Resolution dated November 15, 2002 and approved the new methodology for treatment of exceptional losses in livestock sector due to major DZUD.

According to the new methodology, prepared in collaboration with the International Monetary Fund, distinctions are made between types of animals and between types of losses: first, animals are classified into two categories: I) "work-in-progress" and II) "fixed assets"; second, depending on the historical data of the last 40 years, losses are classified into three categories: 1) normal losses, 2) accidental losses, and 3) or catastrophic losses.

Losses within one standard deviation from the arithmetic mean are considered as "recurrent or normal losses", those between one and two standard deviations are considered as "unexpected incidental losses", and those in excess of standard deviation two are considered as "exceptional or catastrophic losses". Based of the above estimates a set of five thresholds is established to separate exceptional losses from normal and accidental losses by types of animals, such as camel, horses, cattle, sheep, and goat.

Upon the classifications of animals and of losses and in accordance with the "SNA 93", "EAA/EAF 97" and "SEAFA" recommendations, the new methodology introduces certain exclusions of such exceptional losses in the national accounts. For animals classified as "fixed assets," catastrophic losses, which are losses in excess of two standard deviations above the historical mean (a fixed threshold), are recorded in a different way to "normal" losses. In contrast to the normal losses (which are deducted from output), the value of such exceptional losses (up to the time of the loss) is not deducted in the calculation of output (as if the loss had not occurred).

No exclusions are made for animals classified as "work-in-progress". Any loss in animals of this category, regardless of the nature of the loss, is deducted from the calculation of GDP. On the other hand, with respect to the

losses in animals classified as "fixed assets", the new methodology imposes a ceiling of deduction from the calculation of GDP.

This revision in the methodology resulted in a consequential change of the GDP estimates for the years of major dzud, such as 2000-2002, due to the great ratio of the livestock sector in the composition of the GDP.

5. CONSUMER PRICE INDEX (CPI)

In 2003, overall index increased by 4.7%, medical goods and care by 4.9%, transport and communication by 2.1 %, cultural goods and recreation by 11.4 %, other goods and services by 4.3% , but clothing and footwear decreased by 0.1 %, housing , heating and electricity by 1.7 %, household goods by 2.8 %.

The CPI is a measure of the average change in prices over time are a fixed in terms of quantity and quality of goods and services purchased either by all consumers. The CPI reflects the collective experience of inflation for all households in a particular expenditure range and may not correspond to the experience of an individual household.

Since September 1991 the National Statistical Office has began to estimate CPI using IMF methodology. This index was calculated till 1995 based on a basket of 123 items of goods and services , prices for 1991-1-16 was taken as a base period. In 1996-2000 the National Statistical Office upgraded the items in consumer basket up to 205 , prices of December 1995 was taken as the base period. The basic index used for the compilation of the CPI was Laspeyres standard index.

Since 1997 the Monthly Consumer Price Survey has been conducted in aimag centers and prices of 116 items of goods and services are collected and these prices reported to the National Statistical Office to estimate the CPI for each aimags.

Since 2001 items in consumer basket increased up to 239 (in aimags up to 139) new expenditure weights derived from 2000 HIES, prices of December 2000 was taken as the base period. The basic index used for the compilation of the CPI is modified Laspeyres index.

A monthly Consumer Price Survey is conducted by officers in charge of CPI from NSO and Statistical Department of Ulaanbaatar Governor Office and district statistical branches, price data are collected mainly by personal visits for about 90 shops, supermarkets and services centers.The price of the main 20 food commodities taken every week and averaged for the calculation of the CPI .

6. MONEY, CREDIT, STOCK

Banking system. *Before 1991 Mongolia had only one public bank. In 1991 Mongolia introduced two-tiered banking structure as Central bank and Commercial banks. Activities of commercial banks in Mongolia are regulated under the Banking Law of Mongolia. The Bank of Mongolia collects balance sheet data for all commercial banks and publishes monthly bulletin which includes statistics on money supply, monetary survey, deposit and loan interest rate and market rates by dates. The Bank of Mongolia publishes the Annual Report that describes the monetary policy and its results.*

Currency in circulation*-Currency includes coin and paper money. The Bank of Mongolia issues all currency.*

Money M1*-Narrow money M1 includes currency in circulation and demand deposits.*

Money M2*-This monetary aggregate consists of currency in circulation plus demand, time and savings deposits.*

Reserve Money*-This monetary aggregate includes currency issued plus reserves maintained by the banks with the Bank of Mongolia.*

Stock market*-The Mongolian Stock Exchange was established in1991. Monthly data on stock market are sent to the National Statistical Office of Mongolia. The National Statistical Office publishes monthly data on stock market in the monthly bulletin and yearbook.*

TOP-75 index *– is price index of trading stocks that are traded through the Mongolian Stocks Exchange.*

Market capitalization *– It is defined as multiplication of the number of shares issued by registered companies at the Mongolia Stock Exchange and close price of certain day.*

Center deposit *– Center deposit (CDP) saves customers monetary assets and stocks in intangible form.*

Account *– The number which is issued for customers' stock and monetary assets with CDP.*

7. GENERAL GOVERNMENT BUDGET

In 2003, the total revenue and grants of General government were 535.8 bln.togrog, of which 75.5% was the tax revenue, 22.8% non-tax revenue and 1.7% capital revenue and grants respectively. The total expenditure and net lending of General government has reached 616.5 bln.togrog, of which 72.4% current expenditure and 27.6% the capital expenditure and net lending.
The budget overall balance deficit was 80.7 bln.togrogs 5.9 % was the GDP.

Mongolian General government budget consists of the central budget and local budget. The central budget is an integral part of the General government budget of Mongolia, which is centralized expenditure under the Government. The local budget is an integral part of the General government budget of Mongolia, which is centralized expenditure under the governors of aimags and capital city. The local budget is classified as a budget of aimag, the capital city, and a budget of soum or district.

Budget revenue consists of the current revenue, capital revenue and grants. The current revenue consists of the tax revenue and non-tax revenue. Tax revenue includes income taxes, social contributions, tax on property, taxes on goods and services, income from foreign trade and other tax.

Non-tax revenue includes dividends from enterprises with state shares, interest and fines, revenue from rent, own revenue of budget and other non-tax revenue.

Total expenditure is classified the current expenditure, capital expenditure and net lending minus repayment. Current expenditure includes goods and services, interest payment and subsidies and transfers.

Overall budget deficit is current and capital revenue and grants, less total expenditure and lending minus repayment. Current balance is calculated as the difference between current revenue and current expenditure.

The financial year of Mongolia is from 1st, January to 31st, December.

The Ministry of Finance and Economy compiles and consolidates general and central budget revenue and expenditure.

8. INVESTMENT AND CONSTRUCTION

In by preliminary 2003, there was an investment of 342.4 bln togrog, of which 136.6 mln. togrog was spent on construction and major improvements. The total investment comprises of 33.7 % internal and 66.3 % external.

Investment. *Investment includes new savings of establishments, enterprises, capital investment on expansion and improvement of technical equipment, expenditure of reconnoiters, one or more years term government stock securities, shares of establishments and enterprises and a long-term debt to be collected. It is shown by financial sources i.e. budget of provinces, banking loan, directs foreign investment, foreign loan and aid. Ministry of Finance is responsible for collecting and aggregating of data for capital investment financed by state and province budgets, and investments financed by foreign loans and aid. Summarized data are sent by commercial banks and the Ministry of Finance and economic to the National Statistical Office.*

Data of banking loan are collected and aggregated by commercial banks. But data on investment of establishment and individuals are collected by statistical division of aimags and capital city.

Data on investment are collected once a year.

Structure of investment is classified as construction, machinery and equipment, expenditure on purchases of shares at capital market and other expenditures (design and reconnoiter).

Construction. *Statistical data for works done by construction establishments are collected through statistical divisions of aimags and capital city using 5 kinds of forms. This information contains construction work done (by type and purpose of construction), cost, profit, number of employees, wages and price of main building materials.*

9. AGRICULTURE

The value added of the agriculture sector is 20.0% of GDP of Mongolia in 2003. The livestock production comprises 79.5.% of the total agriculture production. The number of livestock by five types (horse, camel, cattle, sheep, and goat) reached 25.4 mln. heads in 2003. The agricultural land of Mongolia is 115.6 thous.hectares, of which 225.9 thous. hectare is for crop production. 165.0 thous. tons of wheat, 78.7 thous. tons of potatoes, 59.6 thous. tons of vegetables were harvested in 2003.

Livestock. *The livestock census and related surveys are not only a primary source of data for livestock sector but also are a basic data for economic accounts of agriculture.*

The main livelihood source and the wealth is livestock in Mongolia. Thus, agriculture statistics has been more developed than those of other economic activities. In 1918 the livestock census was conducted, covering only 4 aimags of the Khalkh Mongol. There was no summarized information for livestock census before 1918 at the country level, although the census was conducted from time to time. The livestock census was conducted in aimags and khoshuud in different periods, with no overall plan and arrangement.

Since 1924, when Statistical Office was set up livestock censuses under general methodology, indicators, and plan. The census was conducted mostly in summer and autumn months of August and September. Since 1961 it has been conducted in December. The advantage of this period is that it conforms to livestock production year and data of indicators for livestock income and expenditure has been finalized.

The result of the livestock census shows not only the growth and decline of livestock and domestic animals, but also gives opportunity to study some indicators of flock reproduction.

In livestock sector, the main producer is a herder household. Households that run livestock production for their livelihood source are considered as a herder household.

The census of staff, machinery, technique and fences in operation in agriculture sector is held every 3 years.

Crop. *Bagh and Khoroo collect data on sown area and harvest from establishments, enterprises, and households, engaged in agricultural production and send to Statistical Divisions of aimags and the capital city through soums and districts. From there, the compiled data are sent to the National Statistical Office for processing.*

Main grains of crop production are cereals, potatoes, vegetables, and fodder. The sown area and the total harvest, yield rate are estimated at the state and aimag levels.

The output of agriculture is the total value of agricultural products, which are the result of rearing of livestock and domestic animals and cultivation of plants during the year.

10. INDUSTRY

The industrial sector produced 801.2 bln.togrog (current price) worth of product in 2003. The value added of this sector is 19.0 % of total GDP.In 2003 industrial output increased by 2.0 % at constant prices of 1995, compared with 2002, among which the manufacturing output was grown by 6.7 percent.

Economic indicators of industry include data for establishments employment, expenditures, value and quantity of production, sales of industrial production, various indicators of financial statement. The principal sources of these data are annual, quarterly and monthly census reports and surveys of the sector. Indices of industrial production growth calculated each month are presented in monthly statistical bulletins. Beginning from 1990, the industrial production data is estimated at the constant price of 1995.

Censuses and surveys *- The first census of establishments was conducted in 1991, the second census in 1994, and the third was in 1998. The sample survey of business activities tendency and the survey on utilization of the capacity are conducted in 1997, 2000 and 2003 respectively.*

Classification of Establishments *– Since 1997 classification of industrial economic activities is applied at the NSO in conformity with the United Nations International Standard Classification of Economic Activities of the National Economy (revised III edition). The establishments are classified on the basis of their main activity, whose proportion of output is more than any other it's product. More than 200 commodities are included in the industrial products. All of these included for calculation of indices of industrial production.*

The National Statistical Office collects data for electric power and thermal power generations from each power stations, on the monthly basis and estimates accounts for electricity capacity once in a year.

In this section of electricity gross power generation and import of electricity, stations' internal use, other losses in transmission and distribution are covered and reported by physical units which are classified by economic activities.

11. TRANSPORTATION

In 2003, volumes of freight and number of passenger traffic were 17622.8 thous. tons and 169.9 mln persons respectively. Turnovers of freight and passenger traffic reached 7504.1 mln tons-km when passenger turnover was 2245.7 mln..

In 2003, compared to the previous year, volume of freight and number of passengers were increased by 30.2 % and 58.8 % respectively. According to State vehicle inspection in total 105.8 thous. vehicles were registered in 2003, of which cars were 68.5 thous., trucks-23.0 thous., buses-9.8 thous., specialized vehicles-1.3 thous., and cisterns-3.2 thousand.

Mongolian transportation sector consists of 4 subsectors, namely road transportation, railway transportation, air transportation, and water transportation. This section presents statistics on freight and passenger turnover, carried passenger and freight volume, international service for passenger and freight, number of employment and revenue.

The National Statistical Office receives data from statistical divisions of the aimags and capital city. These divisions collect data from entities and enterprises. Mongolian Airlines Railway Transport Office collects data from their primary units, and forwards the summarized data to the NSO.

Traffic Police Office of General Police Department of Mongolia summarizes data on State Vehicle Inspection, which is conducted once a year. Since 1998, NSO has been presenting the number of vehicles by aimags and capital city in the Statistical Yearbook of Mongolia.

***Freight turnover** - This indicator equals to carried freight multiplied by carried distance.*

***Passenger turnover** – equals to carried passengers multiplied by carried distance.*

***In terms of ton.km** – all types of the transport services are transferred to one unit using special coefficients.*

Auto roads are classified as:

- *Hard cover roads (cement and asphalt roads)*
- *Gravel roads (repaired and improved soil roads are covered with stones and gravel, thereby increasing road solidity)*
- *Improved soil roads (ordinary soil road is repaired, made dense and which edges are leveled off)*

- *Ordinary soil roads (steppe roads)*

Hard cover, improved soil and gravel roads are considered as improved roads.

Length of improved roads is compiled according to the classification provided by the Auto Road Office and the relevant changes have been made in the previous years data.

12. COMMUNICATION

In 2003, communication revenue was 92.4 bln togrog. As compared to 2002, total revenue of communication increased by 53.7 bln. togrogs. Whereas, the number of telephone by 7.0% or 8.8 thous. pieces.

The latest technologies have been introduced in the communication sector, the mobile users reached to 319.4 thous and the number of internet cafes reached to 11.2 thous in 2003.

This section presents the main statistics on total revenue, of which from population, number of telephones and wired radio outlets, number of persons employed and labour productivity.

Telecommunication Company and Postal Company of Mongolia collect data from primary reporting units (from main branches, which are located in capital city) and sent to the statistical division of Ulaanbaatar city. Post offices of 21 aimags collect data from each soum and send to the statistical divisions of aimags. From there, the summarized data are sent to the National Statistical Office. The related central office of communication sector collects and processes the data using forms of communication activities indicators that are approved by the NSO.

Estimate of total and net output is based on data of annual reports of communication units. This form covers complete information on total communication expenditure and income by types as well as value added, profit, deposits, capital formation and investment.

13. FOREIGN TRADE

For the actual estimates of 2003, the volume of external trade equaled to 1416.9 mln. US dollars out of which export stood as 615.9 mln. US dollars and import as 801.0 mln. US dollars. In the same year trade deficit was 185.1 mln. US dollars, which increased by 18.3 mln US dollars compared with 2002.

Processing of the foreign trade data is based on information of the Customs Office Administration of Mongolia. The Commodities were classified according to the "Harmonized System of Coding Goods" developed by the World Trade Organization.

Customs statistics of foreign trade is registered all kinds of items, which includes export and import goods. But transit goods as well the goods which are temporarily crossed the border and returned across the frontier (excluding the goods produced in domestic and abroad market) are not registered in the foreign trade data due they are not reduce or increase the material resources of a country.

For the customs statistics, primary source information is the customs declaration. Exports and imports are reflected in the official statistics after completion of customs clearance.

In the official statistical bulletin information on export and import are shown by the following groups:

- *trade with payment at foreign currency*
- *barter*
- *goods for repayment*
- *goods made from foreign customers materials*
- *goods delivered by foreign loan*
- *goods of foreign aid*
- *goods delivered by investment*

Exports – it means that a customs rule related to exports of goods, for the customs territory and for complete exports of them out of the territory. Our country is referring to countries with general trade system. General export, cover the following goods:

- *domestic goods originated from free circulation area*
- *domestic goods originated from industrial free zone*

- *goods processed in customs territory*
- *re-exports of foreign goods*

Export goods calculated by "DAF – Mongolian border" term. For transfer of overall value of export in to American dollars, Mongol Bank exchange rate of the day of customs clearance is used.

Imports – it means that a customs rule for import of foreign goods to the customs territory. All customs procedures should be finished. According to general system for registration following goods are included in import:

- *foreign goods*
- *foreign goods manufactured and processed abroad*
- *re-imports of domestic goods*

The price of import goods is defined as CIF – Mongolian border condition, included all costs inside the frontier and this price is a customs price. For transfer of overall value of import in to American dollars, rate of exchange of the day, is used in which was made Mongol Bank.

In accordance with the internationally accepted recommendations and IMF methodology the volume & value of nonmonetary gold is included in statistical data of external trade since 2002. The volume and value of nonmonetary gold for 1999-2001 was provided by Mongol Bank. Since the NSO included them in relevant years the results have been modified.

According to the "Methodology on price index for external trade" which is issued by the Economic and Social Affairs of United Nations, "Methodology on calculating foreign trade prices and physical volume index in Mongolia" have been approved in 1997 year. Price and volume index of foreign trade is calculated according to this methodology.

14. TRADE, HOTELS AND RESTAURANTS

The trade sector, one of the large economic sectors in Mongolia, accounts for 27.7% of GDP by 2002. Gross output of the wholesale and retail trade was 316.4 mln. togrogs and increased by 13.4 percent and 37.5 mln.togrogs.

Establishments engaged in trade purchase commodities from producers and re-sell them to others. They are either specialized in wholesale or retail trade or combine both of them.

The 7th sector in ISEC is whole sale and retail trade which it its turn is classified as the third in producer or service sector.

In accordance with this classification, a trade sector is divided into three sub-sectors:

1. *trade and auto service of machinery, motorcycles and fuel inclusive of wholesale and retail trade and auto service of machinery and motorcycles and spare parts*

2. *whole sale and second hand sale of commodities other than machinery and motorcycles inclusive of retail and wholesale trades by establishments, import and export enterprises*

3. *retail trade of other commodities other than machinery and motorcycles and household item repair services inclusive of trades in shops, counters, door to door and on order.*

Hotel services are inclusive of paid services for rest at public places and organizations, services by on –the- road hotels, boarding houses, designated flats and youth hostels.

Restaurant, bar and cafeteria services include catering services at outlets, units and transport means.

15. HOUSING, COMMUNITY SERVICE

In 2003 the housing stock reached 6901.5 thous.sq.m, and increased by 3.6 percent compared with the previous year, that is 238.5 thous.sq.m.housings were put into operation in the fiscal year (by living areas). 87.6 % of newly constructed buildings were private houses and apartments.

The data on housing put into operation is initially compiled by the governors of bags, khoroo and sent to the related soums and districts. Soums and districts send the data to the National Statistical divisions .

The housing stock estimated by living areas based on the above mentioned data. The estimation excludes national dwelling (ger).

The governors of soums and districts collect data on the number of facilities for community services and forward it to the NSO through the due statictical divisions.

16. TOURISM

In 2003, by duplicated numbers about 725.1 thousand passengers entered through immigration posts and 204.8 thousand of them were foreigners. In comparison with 2002, number of entered passengers has rised by 4.2 percent, out of which number of foreigners has increased by 12.9 percent. 30.1 percent of foreign passengers were tourists and the number of foreign tourists has increased by 39.3 percent in the last year. In 2003, 78.9 percent of foreign tourist were East Asia and Pacific Ocean regions citizenships, 17.6 percent of them were European citizenships.

In Mongolia the tourism is a relatively new sector of our economy and it is developing and expanding. Data on inbound and outbound travelers' number are determined and based on information received from the Border Protection General Board. Some indicators of tourism statistics are included the above-mentioned information. Travelers are classified into groups such as official, private, tourist, transit, study, permanent residence and others by the purpose of travel.

According to the recommendation, titled "To Build the Registration of Tourism" as adopted by the United Nations Statistical Commission on May of 1993, tourism is stay all type of travel activities with duration less than one year with some purposes such as vocation, picnic, official and other purposes. A tourist is a traveler, who will stay at least one day at either a hotel, a dormitory or private houses/apartment in a visiting country. This chapter covers information on number of entered and departed travelers over the boarder of Mongolia.

Outbound Mongolian passengers travel with official, tourist, business, private and study purposes.

17. HOUSEHOLD INCOME AND EXPENDITURE

Since 1966, the National Statistical Office has regularly conducted household income and expenditure survey (HIES). A sample of 2808 households of approximately 0.5 percent of the total households was selected to represent the total households of Mongolia and data on household member's age, sex, employment, household income, expenditure, consumption and housing condition are collected and analyzed on quarterly bases.

The total household income (expenditure) is defined by adding up the amounts of household monetary income (expenditure), own consumption and gifts received free of charge.

The estimation method of per household average indicators have been changed according to international methodology and that indicators displayed as 11232 households monthly average which were covered in the survey during the whole year.

Foodstuff consumption is estimated including purchased, free of charge goods from own production and others, and also foodstuff consumed out of household consumption. Also some foodstuff consumption is estimated by transferring products to one main category. For example, all meat products (sausage, steamed and chopped meat products, etc.) are transferred to one 'meat' category using specific coefficient, which allows whole estimation of meat consumption.

According to requirements to improve a sample size and its representation, and to do estimations at national and regional and aimag levels. the NSO changed the methodology and indicators were changed in 1992, 1994, 1998, 2000 and 2002 reflecting recommendations of international agencies experts

18. EDUCATION, SCIENCE, CULTURE AND ARTS

In 2003, the enrollment rate of children in kindergartens from 3 to 7 years olds was 37.2 percent. There are 686 primary and secondary schools in Mongolia. The enrollment rate of children 8 years and 7 years olds in 1-st grade were 91.3 percent and 46.6 percent. Respectively 98.0 percent of children aged 8-15 years, were enrolled in educational institutions.

In total 131.8 thousand students were attending higher and vocational training institutions such as universities, colleges and vocational training courses in 2003.

Education: *Data for school enrollment, graduates, new entrants and teaching staff is shown by educational level, aimags and capital city. Such indicators as secondary and high school gross enrollment rate, proportion of teachers and enrolled students are being added and number of students in iniversities, colleges, primary and secondary school educational and vocational institutes is being compiled according to the international standard Classification of Education. The ISCED has been updated and revised in 1997 and adopted since then. According to this classification the education is classified between 0-6 Levels.*

Data sources. *Ministry of Science, Technology, Education and Culture (MOSTEC) collects secondary education data from Social policy division of aimag, capital city governors' office administrative offices which is previously sent by secondary education institutes. Vocational and tertiary education data is sent directly to the MOSTED from educational institutes. The NSO receives annual report of the educational sector from the MOSTEC.*

With the emerging private educational institutions the education data of private sector has been covered since 1992.

Vocational and tertiary educational institutions are classified as follows :

1. Universities: The National University of Mongolia, Technical University, Medical University, University of Agriculture, State Pedagogical University, University of Culture and Arts, Dependence University of Mongolia, Otgontenger University, Humanity University, Orhon University, Ikh Zasag University.

2. Institutes and colleges: Other institutions that provide Bachelor's Master's degree and other diploma degrees.

3. Vocational Training institutes: institutes that provide (nondiploma) professional degree..

Gross enrollment rate. This rate is equal to the enrollment in primary and secondary schools divided by the number of 8-17 years olds.

Science: *The Ministry of Science, Technology, Education and Culture compiles information related to science from reseach and Science organizations forwards it to the National Statistical Office.*
The Research and Science organizations include entities that lead scientific pilot activities, research and inventions..
This section presents the number of scientic organizations, employers, and total expenditures by sectors.

Culture and arts: *MOSTEC collects data of culture and arts from the local culture centres of aimags and capital city, NSO receives annual reports from the Ministry of Science, Technology, Education and Culture.*
The number of books per 10000 is estimated as a ratio between the library book stock and the number of resident population.
Data of professional art's organizations and museums covers all aimags and capital city's number of professional art's organizations and museums.

19. HEALTH

In 2003 Mongolia had 6637 physicians, 18.2 thous hospital beds, in 2002 number of physicians and number of hospital beds decreased by 2.7 percent and 2.3 percent respectively. 27 physicians and 73 hospital beds per 10000 population. There are 375 people per phisician.

The Ministry of Health collects the health statistics and provides to the National Statistical Office.

Soum, district, aimag and capital city's health organizations report on hospital activities once a year.

This report shows the number of health organizations, hospital beds, doctors, medical assistants by professional types, staff working in the health sector, the migration of doctors and medical assistants, the number of creches and number of children involved in creches, patients in hospitals and the number of persons who deaths in hospitals. These figures are compiled by aimag, capital city, urban and rural areas.

The Ministry of Finance and Ecomomy reports information on health expenditures.

Every month the indicators like number of persons with infectious disease by aimag and capital city, by types of infectious disease, maternal mortality, infant and child mortality are compiled and reported in the monthly statistical bulletins and introductions.

Social insurance. *In 1994, the State Great Hural (The Parliament) adopted social insurance Laws. These Laws form the legislative base of the social insurance system.*

The social insurance fund is formed on the basis of premiums that are paid by citizens, economic establishments and organizations. The fund will give financial assistance to people when they retire, become disabled or lose labor capacity, or get sick and unemployed. Also, the fund grants an allowance, pension and payment to the family members whose headwinners died.

Employees, who are working under a labour contract with entities and organizations, government officers and herders are automatically covered by insurance, and the rest of people are involved in the insurance on the voluntary basis. Aimag and capital city's social insurance divisions send their reports on social insurance to the General Social Insurance Office on a quarterly basis.

20. CRIME

In 2003, 19934 offences were registered, showing an decreases of 11.6 percent compared with the previous year. 23.3 percent of total offences were committed by drunkards and 73.8 percent of offenders were unemployed.

The crime rates:
1999 - 89.0%
2000 - 89.6%
2001 - 90.1%
2002 - 85.5%
2003 - 72.3%

In 2003, 17641 persons were sentenced.

The Crime indicators have been innovated and enriched in connection with change of Criminal Law.

Indicators like crime against human life, health, crime to cause others to commit suicide, violent crime such as attempted and negligent murder are being compiled in the bulletin;

Rape crime was included to the crime against children, family and social morality;

Crime against ownership right includes theft of property, robbery, snatch away others property, deceiving to obtain others property, illegally misuse others property and wasting;

Arson was included to crime against environmental protection.

Indecent assault was added to crime against social safety.

The number of committed offences per 10000 population aged 18 and over is a guotient of the number of crimes and number of people aged 18 and over at the beginning of the year.

21. NATURAL ENVIRONMENT

By 2003, in total, 73.9 per cent is occupied by agricultural area, 15.6 per cent by state special use land, 9.4 per cent by forest resources land, 0.6 per cent by water resources land, 0.3 per cent by cities, villages and other settlements land, and 0.2 per cent of land is covered by transportation and networks respectively.

Socio-ecological complex issues serves a basis for sustainable development all around the world. The issues include protection of atmosphere, land, land resources, forest, fauna, vegetation and proper and sensible use of natural resources. In addition, rehabilitation of natural land and resources, combatting desertification and droughts, mitigation of adverse effects of agricultural development and use of chemicals and radiactive substances, alleviation and disposal of waste and sound waste management make up the complex issues of socio-ecology.

Recent years have seen a visible change in the ecosystem of Mongolia with increasing desertification, soil erosion, depletion of water resources and biodiversitry which in their turn have been related to significant change in the climate worldwide. During the last 62 years the average annual temperature in Mongolia has warmed by 1.56 degree and by 1.4-1.5 celsius degree in spring and autumn and by 0.3 celsius degree in summer.

Most of environment indicators like fauna resources and their change, environmental erosion and depletion, rehabilitation and waste are produced irregularly for they are being comprised of results of adhoc based census and surveys. Thus, the improvement should be made through susbtantial surveys and researchers.

In order to implement the objective of Statistical Law effective since 1997 Resolution 06 by the Chairman of the National Statistical Office and Resolution 04/10 jointly by the Chairman of the National Statistical Office and the Minister of Nature and Environment were issued in 1998 and 2000 respectively. The resolutions state on manual and questronnaire form with with official environmental statistics would be collected and produced. Using the manual and questionnaire form Land Administration Authority(LAA), Environment Protection Agency(EPA) and Mineral Resources Agency(MRA) collect the data from aimags and soums and send to the Ministry of Nature and Environment. The Ministry sends the annual report and data to the NSO by March 15 every year.

In 2000, the National Statistical Office and the Ministry of Nature and Environment implemented RETA-5860 project :Institutional Strengthening and

Collection of Environment Statistics" with the financial support of ADB. Under the project a compendium of environment statistics in Mongolia was produced and disseminated. The compendium has many of the indicators which are included in this section.

22. BUSINESS REGISTER

By the end of March 2004 business register captured 32.4 thousand legal units of which 26.5 thousand are in operation all of them are making up the key information source for establishment of a frame of GDP estimate. If we look at the aforementioned data by number of employees, out of the total registered legal units or establishments 89.5% employ 1-9(82.1%) and 10-19(7.4%) persons.

Business register was established on the basis of a 1998 establishment census and is quarterly updated. Business register serves a basis for establishing the frame of GDP. Also, it is the prerequisite for accurate establishment of statistical frame and better representativeness of sampling units. Business register provides the key basis for statistical information. Furthermore, it plays an important role in ensuring data transparency and data confidentiality at the same time.

23. WORLD DEVELOPMENT INDICATORS

The indicators of this section is taken from the "World Development Indicators 2002", World Bank Publication.

The indicators in this section provide an overview of the conditions in which more than 6 billion people of the world live. Although, not perfectly correlated with income and consumption per capita, they tend to tell a common story on average, the residents of poor countries have fewer amenities, lack basic skills, and suffer higher rates of illness, and consequently, live shorter lives.

Population, land area, income and output are basic measures of the size of an economy. Therefore, population, land area, income – as measured by gross national income (GNI) – and output – as measured by gross domestic product (GDP) – are used throught the world as development indicators to normalize other indicators. Surface area of a country includes inland bodies of water and inland waterways. In other words surface area exclude offshore territorial waters, but includes coastal areas bordering with ocean and seas.

Land area is particulartly important for understanding the agricultural capacity of an economy and th effect of human activity on the environment.

The table also shows GNI and GNI per capita estimates that are converted into international dollars using purchasing power parities (PPPs).

The net enrollment ratio, infant and child mortality rates are included in teh set of monitoring indicators identified in strategies in the 21st century. The growth of private consumption per capita is included here as an indicator of the effect of economic development. The rate of poverty reduction and distribution of income or consumption, is measured by Gini index.

The long-term trends shown in this section provide a view of the relative rates of change of key social and economic indicators over the past 32 years. Like all averages, they reflect the general tendency, but may disguise considerable year-to-year variation, especially in economic indicators.

Explanation of symbols:

w *weighted averages*
s *simple totals*
t *averages include gapfilled estimates for missing data*
m *median values*

a. PPP is purchasing power parity; see Definitions.
b. Calculated using the World Bank Atlas method.
c. The estimate does not account for recent refugee flows.
d. Estimated to be low income ($ 735 or less).
e. The estimate is based on regression; others are exrtapolated from the latest Comparison Program benchmark estimates.
f. Includes Taiwan, China; Macao, China; and Hong Kong, China.
g. Estimate based on bilateral comparison between Chine and the United States (Ruoen and Kai, 19995)
h . Estimated to be lower middle income ($ 736 - $2,935).
i. GNI and GNI per capita estimates include the French overseas departments of French Guiana, Guadelope, Martinique, and Reunion.
j.Estimated to be upper middle income ($2,936 - $9.075).
k. Estimated to be high income ($9,076 or more).
l. Exludes data for Kosowo.
m. Data refer to mainland Tanzania only.
