READ ME

This document provides information needed to replicate all of the results in "Encouraging the resumption of economic activity after COVID-19: Evidence from a large scale-field experiment in China".

The files needed for replication are as follows:

1. Figures main text.do
2. GPS_data.dta
3. Survey_data.dta

Overview:

All data used in the empirical analysis are stored in two files in Stata format (~data.dta).

- "Survey_data.dta" includes anonymized data from all the surveys included in the field experiment. "
- "GPS_data.dta" includes the aggregate measures derived from the GPS data retrieved from the smartphone app monitoring the behavior of individuals during the field experiment.

The main .do-file (~replication.do) calls up the data and produces the results reported in the paper, clearly indicating the regressions used to generate each figure.
