Readme: Politicians' Labor Market Experiences across Party Families

Data

The main analysis is based on administrative individual level data housed at the secure servers of Statistics Sweden. An auxiliary analysis is based on data from the KOLFU survey of municipal politicians linked to administrative data. This data is also housed at the secure servers of statistics Sweden in a project that is separated from the data in the main analysis.

Data to the left-hand side of Figure 1 was downloaded from the CHES project, and data for Figure W1 from the OECD.

Code-files

Run the code files for the main analysis in the following order.

1. Set Up Underlying Files
2. Set Up Main Data
3. Figures Using Main Population Data
4. Figures Using Main Politician Data
5. Set Up and Analysis of Precinct Voting Data

In a separate project run the do-file "Set Up and Analysis of Kolfu Data".
