Note on the Replication Package

The replication package contains two folders: **Data**, **Do-files,** and **Tables.**

1. **Do-files:** This folder contains following do-files:
    a. **Cleaning0.do:** Using BIHS Round 3 data and generates cleaned temporary files.
    b. **Cleaning1.do**: Generates the person-year dataset used for the survival analysis. The final output is: survival_CM.dta
    c. **Cleaning2.do**: Generate the person-year dataset from speicial module used for the survival analysis. The final output is: survival_CBS4.dta
    d. **Cleaning3.do:** Generate the individual level dataset used for the table 4. The final output of this do file is empowerment.dta.
    e. **Table 2.do**: Replicates Table 2 in the main manuscript.
    f. **Table 3.do**: Replicates Table 3 in the main manuscript.
    g. **Table 4.do**: Replicates Table 4 in the main manuscript.

2. **Data:**
    a. It has subfolder with name: “BIHSRound3” which also has two subfolders: “Male” and “Female”. These folders contain original BIHS dat.
    b. Data (BIHS 2018–2019):
    The microdata used in this project come from the Bangladesh Integrated Household Survey (BIHS) 2018–2019, produced by the International Food Policy Research Institute (IFPRI). The dataset is distributed via Harvard Dataverse under a CC-BY 4.0 license.
    c. Data access:
    Visit IFPRI’s dataset landing page for BIHS 2018–2019:
    https://rdm.ifpri.info/bangladesh-integrated-household-survey-bihs-2018-2019/

3. **Tables**: The outreg2 output of regressions will be stored in this folder.
