Title: “The Impact of Social Desirability Bias on Conspiracy Belief Measurement Across Cultures”

Authors:
Steven M. Smallpage, Stetson University
Adam M. Enders, University of Louisville
Hugo Drochon, University of Nottingham
Joseph E. Uscinski, University of Miami

There are 5 files (not including this one) necessary to replicate all analyses:
1. “Analyses.do”
2. “SDB Data.dta”
3. “Figures.r”
4. “Proportions by CT.csv”
5. “Counts by Condition.csv”

NOTE: All analyses were executed on a MacBook Pro running Catalina 10.15.7. Stata analyses were executed using Stata/SE 15.1. Figures were produced in RStudio 1.3.1093, using R 3.6 (Mac OS).

Analyses.do
This Stata .do file contains the code necessary to produce all tables in the main text and supplemental appendix, as well as the information used to produce all figures. Requires “SBD Data.dta”. Produces “Proportions by CT.csv” and “Counts by Condition.csv”.

Figures.R
This is an R script containing the code necessary to produce all figures in the main text and supplemental appendix. It uses “SDB Data.dta”, “Proportions by CT.csv”, and “Counts by Condition.csv”.
