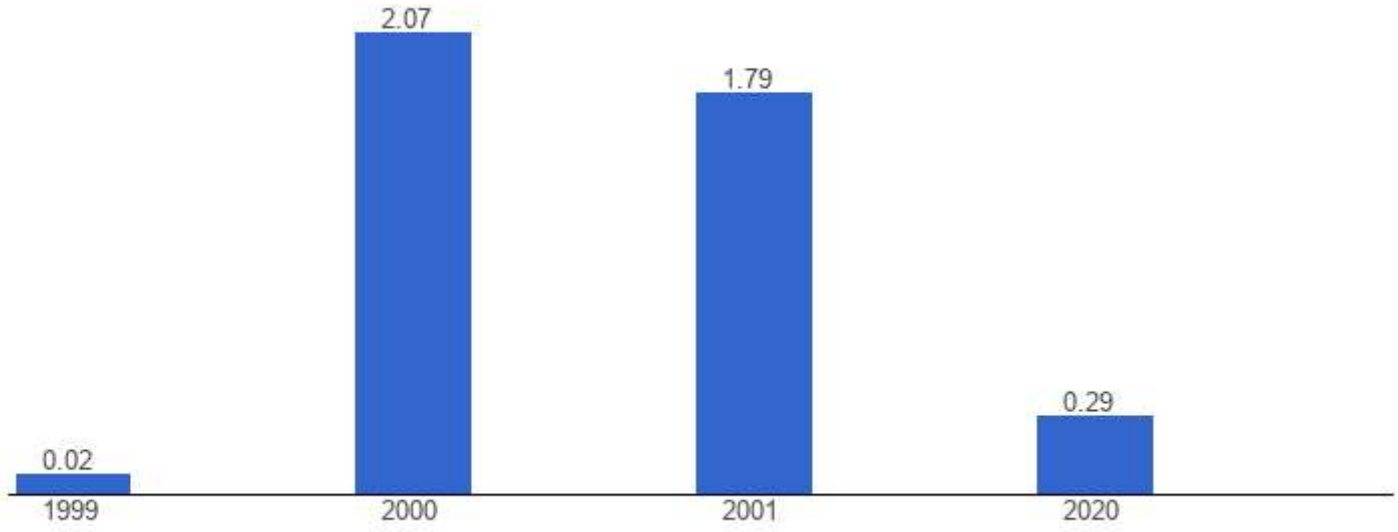
Recent values



The stock market turnover ratio in Tanzania equals "the value of all stock market trades / the market value of all listed companies." It reflects how *active* the stock market of Tanzania is. A country may have many listed companies but few active trades. Conversely, there may be few listed companies but many trades.

Definition: Turnover ratio is the value of domestic shares traded divided by their market capitalization. The value is annualized by multiplying the monthly average by 12.
