Title: “The 2020 Presidential Election and Beliefs About Fraud: Continuity or Change?”

Authors:
Adam M. Enders, University of Louisville
Joseph E. Uscinski, University of Miami
Casey Klofstad, University of Miami
Kamal Premaratne, University of Miami
Michelle Seelig, University of Miami
Stephan Wuchty, University of Miami
Manohar Murthi , University of Miami
John Funchion, University of Miami

There are 11 files (not including this one) necessary to replicate all analyses:
1. “Over Time.do”
2. “October 2020.do”
3. “Figures.r”
4. “Over Time.csv”
5. “Predictions.csv”
6. “Standardized Coefficients.csv”
7. “Clean Data, CCES 2012.dta”
8. “Clean Data, CCES 2016.dta”
9. “Clean Data, CCES 2018.dta”
10. “Clean Data, October 2020.dta”
11. “Codebook.pdf”

NOTE: All analyses were executed on a MacBook Pro running Catalina 10.15.7. Stata analyses were executed using Stata/SE 15.1. Figures were produced in RStudio 1.3.1093, using R 3.6 (Mac OS).

Over Time.do
This Stata .do file contains the code necessary to produce Figure 1 from the main text. Also contains code to produce supplemental appendix Tables A8 and A9. Requires all “Clean Data” files. Produces “Over Time.csv”.

October 2020.do
This Stata .do file contains the code necessary to produce Table 1 and 2, as well as Figure 2, from the main text. Also produced Tables A1–A4 and Figure A1 of the appendix. Requires “Clean Data, October 2020.dta”. Produces “Predictions.csv” and “Standardized Coefficients.csv”.

Figures.R
This is an R script containing the code necessary to produce all figures in the main text and supplemental appendix. It uses “Over Time.csv”, “Standardized Coefficients.csv”, and “Predictions.csv”.
