README

This folder contains the replication material for “Health and Economic Growth: Reconciling the Micro and Macro Evidence” by David E. Bloom, David Canning, Rainer Kotschy, Klaus Prettner, and Johannes Schünemann. The folder contains the following files:

- *bckps_replication.do*: The Stata do-file for the replication of the results.
- *bckps_data.dta:* The dataset for replication of the results.

All files have been created with Stata version 17. The replication material requires Stata version 14 or higher. To replicate the results, open the do-file and run the preamble to change the directory. Before running the code, it is necessary to install the user-written packages *ranktest, ftools, moremata, ivreg2, xtabond2, and estout,* which are required to produce the results in the paper. Once the packages have been installed, choose the code for the content you want to replicate, select the code, and run it.
