README

This folder contains the replication material for “Epidemic Shock and Civil Violence: Evidence from Malaria Outbreaks in Africa” by Matteo Cervellati, Elena Esposito, and Uwe Sunde (*Review of Economics and Statistics,* 2021, forthcoming). The folder contains the following files:

• The replication datasets:

- conflict_monthly.dta — Panel data with monthly panel frequency
- conflict_yearly.dta — Panel data with yearly panel frequency

A detailed data description, including data sources, can be found in the Supplementary Appendix to the paper, published at the website of the *Review of Economics and Statistics.*

• The codes for replicating the results in the paper: Stata do-files

- replication_tables.do — Code for replicating the tables
- replication_tables_conley.do — Code for replicating the Conley standard errors in Table 3
- replication_counterfactual — Code for replicating the counterfactual exercises contained in Figure 3

Replication requires Stata (version 16).

To replicate the results, open the respective do-file and adjust the path (if needed) to change the directory in order to load the dataset. Choose the code for the content you want to replicate, select the code, and run it. Before running the code, it may be necessary to install additional packages from public repositories.
