We are going to start the interview now. Are you I will use an audio recorder to more accurately capture what you say. ready?

[*TURN ON RECORDER NOW*]

Interview start time **[___ ___ : ___ ___]**

1. How old is your child now, in months? (Please add to table above)

To begin, I would like to ask you some questions about your thoughts on the communications that were sent out before the community drug distribution.

2. What did you hear about the recent community drug distribution event/campaign before it happened?
    a. How did you hear about it? (Probe: from the TV, radio, town criers, church/mosque, friend, someone came to the house etc.?)
    b. Do you remember hearing information specifically about what additional benefits of azithromycin for children 1 to 11 months old? What did you hear?
    c. Did the messages affect your decision to allow your baby to be given azithromycin?
    d. How did they affect your decision?

3. Did someone come to your house to tell you about when and where the community drug distribution would take place? If yes, ask:
    a. How did the person who came to your house affect your decision to have your child receive azithromycin? Why or why not?
    b. How did you feel about the community mobilization actions (for example, someone coming to your house) before the community drug distribution?

4. People were told that healthy children 1 to 11 months should take azithromycin both to prevent trachoma, and to improve child survival. What does that mean to you when we say that azithromycin can help child survival for children in this age group?
    a. How do you feel about your child getting azithromycin for this reason?
    b. Do you have any concerns about giving your child this medicine for this reason? If so, what are they.
    c. Do you have any concerns about giving azithromycin to very young babies who are 1 to 5 months old? If so, what are they?

5. Why did you decide not to have your child receive azithromycin?
    a. What were your concerns? (*Probe for whether the participant had logistical barriers such as travel vs. concerns about the medication.*)
    b. What could have been done to make you feel differently/for you to accept your child receiving azithromycin?
    c. Did other children in the household receive azithromycin? If yes, why did some children receive azithromycin and others did not? (*Probe for whether parent/caregiver had concerns related to young age of 1 to 11-month-old baby*)

6. Do you have any questions about giving azithromycin to healthy babies who are 1 to 11 months old that did not get answered?

7. To improve child survival, children from 1 to 11 months need to receive azithromycin two times a year. Are there any changes to the way the drugs are distributed in your community to make it easier for children in this age group to get the drug?
    a. Is there anything that could be done differently so that you would want your child to get the drug during the community distribution campaign?"

Before we end our interview, do you have any final thoughts or suggestions for us?

Thank you for your time. We appreciate the answers you have given us.

Interview end time **[___ ___ : ___ ___]**
