Data Replication Archive
"Cooperating With the State: Evidence from Survey Experiments on Policing"
Journal of Experimental Political Science
October 8, 2015

Contents:

1. Raw data file: CWTS raw data.dta
2. Do file to produce final data set: CWTS data preparation.do
3. Final data set: CWTS prepared data.dta
4. Do file to produce main regression tables: CWTS regression tables.do
5. Do file to produce all other tables and graphics: CWTS additional output.R
6. Generated output: 'output' directory

The raw data used in this paper is provided in Stata 12 format. Cleaning and preparation of this data was done using Stata 13.1 with the code provided in file #2 above. All tabular and graphical output in the paper is produced using two code files, the first being a Stata 13 do file and the second being an R file.

The R code used was tested and run on various versions of R from 3.1 to 3.2.2. Required libraries (not including dependencies) include: foreign, xtable, memisc, reporttools, stargazer.

Replication of all output in this paper, including appendices and supplemental materials, can be conducted by running code files 2, 4, and 5 in order. By default, all output of these files will be exported automatically to the "output" folder in this archive.
