REPLICATION FILES FOR

"ONLINE ABUSE OF POLITICIANS:
EXPERIMENTAL EVIDENCE ON POLITICIANS' OWN PERCEPTIONS"

May 2024

This document describes the files needed to reproduce results reported in the article:
Pedersen, Rasmus T., Niels B. G. Petersen & Mads Thau (2024). Online Abuse of Politicians: Experimental Evidence on Politicians' own Perceptions. *Political Behavior* (forthcoming).

The replication files are as follows:

1. **Online_abuse_replication_file.dta**: Data set containing responses from survey conducted among Danish politicians (Stata file format: .dta)
2. **online_abuse_analyses.do**: A Stata do-file, used to reproduce all main results reported in the article. Written for Stata 17 (Stata file format: .do)

To reproduce results:

1. Open the data set **Online_abuse_replication_file.dta** (or store data set in working directory)
2. Run ("Execute") the Stata do-file **online_abuse_analyses.do**.
   Note, to execute correctly, the do-file requires the packages *"estout"*, *"coefplot"* and *"blindschemes"* (The do-file contains information on how to install these packages).

Note:

To ensure anonymity and legal compliance with *EU General Data Protection Regulation* (*GDPR*), the dataset has been scrubbed of variables that may be used to identify respondents. The variables included in **Online_abuse_replication_file.dta** are sufficient to reproduce all the preregistered/primary models (as well as some additional/exploratory models).
