Replication of

Structuring intra-party politics: a mixed-method study of ideological and hierarchical factions in parties

Ann-Kristin Kölln, University of Gothenburg
Jonathan Polk, Lund University

Data

The analyses rely on an original survey dataset collected by the project 'Political Party Member Responses to Organizational Change: Exit, Voice, and Loyalty' (Swedish Research Council, 2016-01810).

The cross-sectional survey covers members of seven Swedish political parties with a total of 20,041 responses. The dataset PartyMemebershipSurvey.csv contains all the variables necessary to replicate the individual-level analyses. The dataset factions_LR.csv contains the variables to replicate Figure 4, and the dataset factions_GT.csv contains the variables to replicate Figure 5.

Code

The file hierarchical_clustering.R contains code for replicating all results connected to the hierarchical clustering using R software.

The file Main_Analysis_AppendixE.R contains code for replicating all tables and figures reporting on the survey data in the main body of the text and in Appendix E using R software.

The file AppendixA.R contains code for replicating additional results as reported in Appendix A using R software.

The file Figure 4+5.R contains code for replicating Figure 4 and 5 in the main body of text, using R software.
