DESCRIPTION
Topics addressed in these studies pertain to economic globalization, the room to maneuver, performance evaluations, preferences over policy and political issues, and participation in elections. The data file pools surveys from ten separately administered, nationally-representative public opinion surveys. Countries represented are Australia, Canada, Denmark, France, Germany, Great Britain, the Netherlands, New Zealand, Sweden, and the United States.

Surveys in Australia, Canada, Denmark, France, Germany, the Netherlands, Sweden, and United States were carried out by IFOP (http://www.ifop.com/). The survey in New Zealand was conducted as part of the 2008 New Zealand Election Study (http://www.nzes.org/). The survey in Great Britain was carried out by YouGov (http://www.yougov.co.uk/). FIELDWORK, SAMPLE, WEIGHTS

AUSTRALIA
Field 18th November – 3rd December 2008

National representative sample of the population aged 15 and over. These samples are developed according to the quotas method based on gender, age and region.

No weighting of the data is applied.

CANADA
Field 14-21th November 2008
The sample is representative of the national population aged 18 and over.

Interviewing is disproportionately allocated by region as follows:

- Atlantic ..... 125 interviews
- Quebec ..... 250 interviews
- Ontario ..... 250 interviews
- Manitoba/ Saskatchewan . 125 interviews
- Alberta ..... 125 interviews
- British Columbia ..... 125 interviews

Within the regional quotas of Quebec, Ontario and British Columbia, CMA (Census Metropolitan Area) quotas are assigned to ensure a proportionate number of interviews are completed in Canada's three largest markets; Montreal, Toronto and Vancouver. The sample is then weighted in tabulation to replicate actual population distribution by sex and age within region. The Yukon, Nunavut and Northwest Territories are excluded from the sample selection.

Sample is generated from a database of all published Canadian telephone numbers; almost 9 million records nation-wide. Randomizing the final digits of the telephone number ensures full coverage of Canadian

households for any sample drawn from the database. This includes unlisted numbers and numbers not allocated at the time of the database's compilation. This sampling technique is designed to ensure that each Canadian household with a telephone has an equal probability of being selected for an interview.

A respondent within a household is selected using the Next Birthday Criteria, that is on the basis of "being the individual in the household whose birthday falls soonest after today's date. Interviewers must adhere to strict quotas within region to ensure that an equal number of interviews with male and female respondents are obtained. Respondents must indicate their age prior to proceeding with the questionnaire, however, there are no particular age quotas implemented. Qualification is based simply on being 18 years of age or older.

Weighting is based on age, gender and region.

DENMARK
Field 19-26th November 2008

The sample is representative of the national population aged 15 and over.

Telephone sampling is based on one list of all registered fixed telephone numbers in Denmark and one list including with registered mobile phone numbers in households where no fixed telephone number is registered. The sampling consists of 70% fixed numbers and 30% mobile only numbers. Quotas are used on gender and region and data is weighted based on gender, age and region.

FRANCE
Field 20-21st November 2008

The sample is representative of the French population aged 15 and over based on 2004 census data applied to quotas of gender, age, occupation of the main household income earner, region and size of town category (less than 2 000 inhabitants, from 2 000 to less than 20 000 inhabitants, from 20 000 to less than 100 000 inhabitants, 100 000 inhabitants and more, Parisian agglomeration).

Quotas are met strictly. Data is not weighted.

GERMANY
Field 18th November – 2nd December 2008

The sample is representative of the national population aged 15 and over.

Based on the following geographical segmentation:

federal states
administrative districts
towns located outside districts
rural districts
municipalities (with 2.000+ inhabitants)
sum of the municipalities with up to 1.999 inhabitants per rural district
…5.515 sample cells are defined which complete list of telephone numbers is generated. Interviews are based on the random method including random selection of respondent within the household (computer selection from complete list of household members).

Data is weighting based on household size, age, gender, education and county.

GREAT BRITAIN
Field: 24 November – 2 December 2008

Internet survey administered by YouGov.

Data are weighted.

NETHERLANDS

Field: 17th November – 8th December 2008

The sample is representative of the national population aged 15 and over based on quotas of gender, age and region. Data is weighted on gender, age and region.

NEW ZEALAND
Field: mail-back survey distributed immediately following the September 12, 2008 election.

The study is meant to be representative of New Zealanders on the electoral roll immediately prior to the 2008 election. A very small number who registered in the two weeks before the election were excluded. The sample is a random sample from the electronic electoral rolls. Sampling units were selected using SPSS select casese (random sample). Furthermore, the sample was partitioned into four groups. New Zealanders of Maori descent can choose to be registered on a separate Maori roll, and cast their electorate votes within seven constituencies that overlie the general electorates. For its new sample the 2008 New Zealand Election Study randomly sampled within four subsets of registered voters and oversampled subsets 1, 3, and 4 below, groups of particular interest to the researchers.

1. Those on Maori roll 27 and over
2. Those on General roll 27 and over
3. Those on Maori roll 18-26
4. Those on General Roll 18-26

The weights were designed to match known sex and age distributions in the electoral roll from which the sample was taken.

SWEDEN
Field 19th November – 1st December 2008

The sample is representative of the national population aged 15 and over.

Interviewing was based on the random method drawn from phonebook lists. Data is weighted based on age, gender and region.

UNITED STATES
Field 13th-16th November 2008

The sample is representative of the national population aged 18 and over.

Sampling is based on a fully-replicated, stratified, single-stage random-digit-dialing (RDD) sample of telephone households. Sample telephone numbers are computer generated and loaded into on-line sample files accessed directly by the CRT system. Within each sample household, one adult respondent is randomly selected using a procedure based on the "Most Recent Birthday Method".

Weighting is based on age, gender, region, education and race.

q4 tax spend

Next, we are interested in your thoughts on some current political issues. Some people think the government should provide fewer services even in areas such as health and education in order to cut taxes. Other people feel it is important for the government to provide more services even if it means raising taxes. Which of the following is closest to the way you feel? Would you prefer to
