Table 1 *(continued)*

		Sunspot cycle and sunspot number amplitude							
Epoch	Latitude	15 (176)	16 (130)	17 (199)	18 (219)	19 (285)	21 (233)	22 (213)	23 (180)

NOTE—The table gives the measured supergranular lane widths in [Mm] at different solar latitudes for 3 epochs. The error involved is ± 0.06 Mm. The columns represent the epoch, latitude and the lane widths at different sunspot cycles. The sunspot number amplitudes are given in the brackets.
