This data comprises a of NDSA members. (See membership list below). A summary is published in:

NDSA Storage Report
Reflections on National Digital Stewardship Alliance Member Approaches to Preservation Storage Technologies

By: Micah Altman, Jefferson Bailey, Karen Cariani, Michelle Gallinger, Jane Mandelbaum, Trevor Owens, and the NDSA Infrastructure Working Group

D-lib 2013 Forthcoming

The NDSA storage survey was conducted between August 2011 and November 2011. Responses were received from 58 of the 74 members of the National Digital Stewardship Alliance who stated that they were actively involved in preserving digital content at the time. There were a total of 98 members of NDSA during that period.

Survey Instrument

System Survey

The Infrastructure working group of the National Digital Stewardship Alliance is working to better understand how member organizations are approaching storage for their preservation systems. As part of this effort, we are asking each NDSA member institution to respond to this 22-question survey. For institutions where preservation and access are coupled at the storage level, the following questions should be answered for the entire system. For institutions that have separate archival storage, the questions should be answered for the archival storage only.

1. My organization's storage system uses the following storage media for preservation storage (check all that apply):

- Spinning disk - Locally or network attached storage (NAS)
- Spinning Disk - Storage Area Network (SAN)
- Magnetic tape
- Other (specify)

2. In general, how many preservation copies of the digital assets are you keeping?

1 2 3 4 5 > 6

3. Approximately, how many terabytes of storage space do you require for all copies of your content that you manage?

4. Approximately, how many terabytes of storage space do you anticipate needing for all copies of your content that you manage in three years?

5. Is your organization keeping copies of digital assets in geographically distinct places to protect from regional geographic disasters? (Check all that apply)

- Yes, we manage our own copies in one or more geographically distinct offsite locations
- Yes, we keep additional copies of our materials in a distributed collaborative partnership
- Yes, we keep one or more additional copies of our materials managed by another institution or commercial provider
- In some cases, decided on collection basis
- No, we would like to but we do not have the resources
- No, we do not and this is not something we are pursuing

6. When does your organization check the fixity of the content you are preserving?

- We do fixity checks before and after transactions like ingest
- We do fixity checks on all content we are preserving at fixed intervals
- We randomly sample content and check for fixity
- We store fixity information in an independent system
- We use a tamper-resistant fixity check mechanism (E.g. LOCKSS, ACE)
- We do not do fixity checks on our content

If your organization performs fixity checks on content you are preserving at fixed intervals, how frequently (in months) do you perform those checks? (i.e., if you perform them monthly, enter 1; if every nine months, enter 9; if annually, enter 12)

7. Does your organization have specific performance requirements for your storage system or systems? (Check any and all that apply)

We have documented general performance requirements
We have documented performance requirements for ingest
We have documented performance requirements for migration to new technology or other one- time intensive operations.
We have documented functional requirements
We have documented security requirements
We plan to develop requirements within one year
We have other documented requirements (Specify)

8. What are your requirements for access to the content you store? (If you have different requirements for different collections please check each option that applies to one of your collections)

Eventual availability only (dark archive/disaster recovery)
Off-line availability (e.g. able to retrieve on request w/in 2 business days)
Near-line availability (e.g. able to retrieve on request w/in 3 hours)
On-line availability (e.g. instant online access for "moderate" number of simultaneous users)
High-performance availability (access to large number of simultaneous users/or for HPC)

9. Does your organization use separate storage systems for access-only and preservation-only services?

Yes
No

10. Which services does your organization currently provide for files in your preservation storage?
(Check all that apply)

Secure storage with backup and recovery procedures in place
Periodic fixity checking
Version control
Format normalization, format migration, or platform emulation

11. Do you provide different services for different "collections" under preservation storage?

Yes
No

12. If you do provide different services for different collections please describe them below.

13. How significant are each of the following general features of preservation systems for meeting your organizations objectives. (1 being insignificant, 5 being most significant)

More storage
Block level access to storage (not just file level)
Higher performance processing capacity (to do processing like indexing on content)
More built-in functions (like fixity checking)
More automated inventory, retrieval and management services
More security for the content
File format migration

14. My organization has a plan to meet our preservation storage requirements over the next three years.

- Strongly disagree
- Disagree
- Neutral
- Agree
- Strongly agree
- Not Applicable

15. In general, how long (in years) is your organization responsible for preserving content? (Enter
999 if your organization has explicit or implicit indefinite responsibility)

16. I expect my organization will have adequate resources to meet projected preservation storage requirements over the next three years.

- Strongly disagree
- Disagree
- Neutral
- Agree
- Strongly agree
- Not Applicable

17. My organization plans to make significant changes in technologies in its preservation storage architecture within the next three years.

- Strongly disagree
- Disagree
- Neutral
- Agree
- Strongly agree
- Not Applicable

18. My organization intends to meet requirements for a trustworthy digital repository according to TRAC or the planned ISO standard 16363 within the next three years.

- Strongly disagree
- Disagree
- Neutral
- Agree
- Strongly agree
- Not Applicable

19. Is your organization participating in a distributed storage cooperative or system? (E.g. LOCKSS
Alliance, , MetaArchive, Data-PASS)

- Yes, my organization currently participates in distributed storage cooperative or system.
- No, but my organization is planning to participate in a distributed storage cooperative or system.
- No, but my organization is currently exploring participating in a distributed storage cooperative or system.
- No, my organization is not considering participating in a distributed storage cooperative or system.

No, and my organization is uninterested in participating in a distributed storage cooperative or system.

If you are using, considering or exploring participating in a distributed storage cooperative please list specific cooperative you are participating in, considering or exploring.

20. Is your organization contracting out storage services to be managed by another organization or company?

Yes, my organization currently contracts out storage services which are managed by another organization.

No, but my organization is planning to contract out storage services which are managed by another organization.

No, but my organization is currently exploring contracting out storage services which are managed by another organization.

No, my organization is not considering contracting out storage services which are managed by another organization.

No, and my organization is uninterested in considering contracting out storage services which are managed by another organization.

If your organization is considering, exploring or currently contracting out storage services to be
managed by another organization or company please list specific services you are using, considering or exploring.

21. Is your organization using third-party cloud storage service providers (E.g. Amazon, Rackspace, Azure, DuraCloud, etc.) for keeping one or more copies of its content?

Yes, my organization currently using third-party cloud storage service providers for keeping one or more copies of its content.

No, but my organization is planning to use third-party cloud storage service providers for keeping one or more copies of its content.

No, but my organization is currently exploring using third-party cloud storage service providers for keeping one or more copies of its content.

No, my organization is not considering using third-party cloud storage service providers for keeping one or more copies of its content.

No, and my organization is uninterested in using third-party cloud storage service providers for keeping one or more copies of its content.

If you are using, considering or exploring third-party cloud storage service providers (E.g. Amazon, Rackspace, Azure, DuraCloud, etc) for keeping one or more copies of its content please list specific services you are using, considering or exploring.

22. My organization has a strong preference to host, maintain, and control its own technical infrastructure for preservation storage?

Strongly disagree

Disagree

Neutral

Agree

Strongly agree

Not Applicable

If your organization does have a strong preference to host and control its own technical infrastructure for preservation storage why does it have this preference?

Coded Variables & Replication Code

One variable was created through manual coding:

Organization Role – a classification of the organization's primary role, based on expert evaluation of the organization (organization name has been removed to protect confidentiality)

A number of indicator variables were used to simplify the creations of charts, tables and summaries. All of the formulas used are available in the JMP file included in this study.

NDSA Membership as of Nov 2011.
