Replication material for Inclusion without solidarity:

Education, economic security, and attitudes towards redistribution

Margarita Gelepithis* Marco Giani†

- The file Data.dta includes the subset of variables from the ESS that we used for our Tables (1 and 2) and Figure 1.
- The file Replication.do includes the stata codes for our Tables (1 and 2) and Figure 1. It also lists the ssc stata packages needed for the replication. It must be noted that the matching analysis requires strong RAM and takes a while - several hours in a normal laptop - to be completed. Moreover, the iteration of the matching analysis that we implement in order to prune outliers inevitably encouters STATA errors. This is not a problem but it implies that it's to copy/paste than to execute the code.
