Replication Package for Asymmetric Fairness

Explanatory Note

This replication package provides the code and data required to reproduce the figures. All statistical tests are two-sample *Z* tests of proportions with two-tailed *p*-values (i.e. `prtest` on Stata).

This package contains

1. `data.dta`: dataset containing all variables required for running the replication package
2. `run.do`: a Stata 16 script file that replicates the relevant statistics
3. `results.pdf`: an output log file from `run.do`
4. `README.pdf`: this note file

Steps to replicate

1. Download the package and place the `data.dta` and `run.do` files in the same directory
2. Run `run.do`
3. Results are available in the output `results.pdf`
