Replication Documentation and Instructions for: Explaining Variation in Political Leadership by Marginalized Groups: Black Officeholding and "Contraband Camps"

This document provides a step-by-step guide for replicating the results reported in the manuscript. If you have questions, please contact me at karin@vt.edu

Software:

All figures and tables were created in Stata 15, with the exception of Figure 1 in the main text and Figure 1.1 and Figure 1.3 in the appendix. Figure 1, 1.1 and 1.3 were created using ArcGIS. The following packages will need to be installed: outreg2, psmatch2, sensatt. In addition, we use bootstrap standard errors. Because these are random draws, users will obtain slightly different standard errors unless they set the seed to 1234 (which is included in the code.)

Analysis Replication:

The data set to create all tables and remaining figures uses the *analysis_data.dta* file and the code is called *analysis_file_final*. This file will create the following tables and figures in the main text: Table 1 and Table 2. It will also create the following tables and figures found the appendix: Figure 1.2, Figure 1.4, Figure 1.5.1, Figure 1.6.1 Figure 1.6.2, Figure 1.6.3, Table 1.1, Table 1.2, Table 1.2.1, Table 1.2.2, Table 1.2, 1.3.1, Table 1.4.1, Table 1.5.1, Table 1.5.2, Table 1.6.1, Table 1.6.2, Table 1.6.3, Table 1.6.4, Table 1.7.1
