Details for replication

The main do file is called "Replication_code_PSLE_Riambau_Ostwald". This uses the data set named "Data_PSLE_Riambau_Ostwald_PSRM.dta". This do file provides all details for Tables 1 and 2 in the main document, as well as Figure 1. It also provides all details for Tables 1, 3 and 6 of the Supplementary Materials, as well as Figure 1. Running this do file automatically saves the dataset "Data_R_PSLE" to be used in **R** for other tables we present.

Table 4 Supplementary Materials

Table 4 of the Supplementary Materials uses an **R**-package called `list`, specifically written for **R** (details here: `https://cran.r-project.org/web/packages/list/list.pdf`). Hence, we need to use **R** to create that table. The **R** code is called "R_Replication_File_PSLE". This code calls the data set named "Data_R_PSLE.rdata" (see previous paragraph).

Table 5 Supplementary Materials

Table 5 is a replication of another study (Ahlquist et al., 2014). Hence, we have a different do file for it. The file is called "PSLE_Replication Ahlquist et al 2014", which calls the data set named "AMJ_wave_2".
