Replication materials for "The Promise and Peril of Peacekeeping Economies"

The replication materials include the following files:

- **BGGK_ISQ_data_macro.dta**
  Stata/MP 15 dataset containing the data needed to replicate the article's macro-level analysis.

- **BGGK_ISQ_data_micro.dta**
  Stata/MP 15 dataset containing the data needed to replicate the article's micro-level analysis.

- **BGGK_ISQ_code.do**
  Stata/MP 15 code to replicate the article's analysis. This code should be run first, because it generates an output file on which the R code listed below depends.

- **BGGK_ISQ_code.R**
  R x64 3.4.4 code to replicate the remainder of the article's analysis.

- **BGGK_ISQ_code_prep.do**
  Stata/MP 15 code to prepare both the macro- and micro-level data for analysis. Input datasets (World Development Indicators, UCDP/PRIO conflict data, etc.) are not included with the replication materials; this code does not run without them, but shows how the data was harmonized and merged, variables were constructed, etc. The resulting data files, which were used in the statistical analysis, are included with the replication materials (see above).
