1 Introduction

Validly measuring sensitive issues such as norm-violations or stigmatizing traits through self-reports in surveys is often problematic. Nevertheless, research in deviance, in epidemiology, and many other areas relies heavily on such self-reports. Finding techniques that provide a valid measurement of sensitive items is, therefore, very important. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) are intended to mitigate misreporting by providing complete concealment of individual answers. Recently, a new variant of the Randomized Response Technique, the so-called crosswise-model RRT (Yu:2008), seemed promising as it apparently performed better in eliciting self-reports of sensitive behavior (e.g., Jann et al. 2012, Höglinger et al. 2014b)

Yet, evaluating such techniques poses a challenge in itself. The most common approach is to compare prevalence estimates between various techniques under the "more is better" assumption: if more respondents give a socially undesirable response, a technique is considered as producing more valid results. However, such comparative validation studies relying on the "more is better" assumption have a serious weakness. If false positives occur, i.e. if respondents incorrectly give the socially undesirable answer, conclusions drawn about a particular question technique's validity might be wrong. Individual-level validation studies where individual self-reports are compared to some external criterion are obviously superior but are very restricted regarding the items that can be validated.

We developed an enhanced RRT comparative validation study that is able to detect systematic false positives. It is therefore able to test the "more is better" assumption and, therefore, allows for a much more reliable assessment of the validity of the sensitive question techniques under investigation. This is achieved by implementing among the sensitive items zero-prevalence items, i.e. items with a known real prevalence of zero or nearly zero. If a sensitive question technique systematically produces false positives, the estimates of the zero-prevalence items will be non-zero and the "more is better" assumption is no longer tenable. If, however, the estimate for the zero-prevalence items are correct, and thus no false positives are produced, relying on the more-is-better assumption is warranted on much firmer ground.

A second goal of the study was to test the effect of a social norms treatment (e.g., Schultz et al. 2007, Diekmann et al. 2015) on reported organ donation willingness. Respondents were shown different results about the general willingness to donate organs after death based on previous survey studies. Then, they themselves were asked about their willingness to donate organs. In addition, we elicited respondents' beliefs about the general willingness prior and after the social norms treatment.

In the following, we describe the experimental design of the study, the questionnaire used and details on the sensitive question technique implementations, the field work, and the resulting dataset. The appendix contains print screens of the questionnaire pages and a codebook of the data. We also included print screens of how basic characteristics of the panel users were elicited in the course of the registration process or when updating their basic panel information.

Table 1: Key information about the study

Participants	Members of the PsyWeb Online Access Panel
Number of participants	1,722 (data collection stopped at 21.12.2015, 11:00, GMT+01:00)
Participating in experimental treatments	1,686 (completing the questionnaire up to the experimental treatments)
Incentive	Participation in a raffle with the possibility to win 5 x EUR 100
Experimental design	Factor 1: social norm treatment (low/medium/high/control) Factor 2: sensitive question technique (DQ/CM)
Field date	November 30 to December 21, 2015
Survey method	Online survey with personalized access link
Survey title	Survey on Organ Donation and Health
Survey software	Qualtrics (see Qualtrics Labs Inc. 2012)

2 Study overview

Participants were members of the online panel PsyWeb (see https://psyweb.uni-muenster.de). 10,000 participants of the panel were sent an invitation for this study, with 1,686 completing the survey up to the experimental treatments. Table 1 contains some key information about the study.

In the mail invitation, respondents found a link to an online questionnaire that started with some questions related to organ donation (see appendix A.1 for details). Then, respondents were assigned to different social norm treatments. They were presented information on the general willingness to donate organs after death in the German population based on representative surveys.

After that, five health-related sensitive items were asked: on ever having donated blood, willingness to donate organs after death, having received a donated organ, having suffered from Chagas disease, and on excessive drinking. The sensitive items were surveyed using two sensitive question techniques that were randomly assigned: Direct questioning or CM, a variant of the crosswise-model RRT. After that, respondents answered other health and organ donation related questions. Appendix A.2 contains print screens of all questionnaire pages.

The questionnaire used consisted of 30 to 39 screens, depending on the experimental conditions a respondent was assigned to (see table 2). Respondents could not navigate backwards when filling out the questionnaire. The median response time was 10.4 minutes, with the questionnaire version using the crosswise- model taking 4 minutes longer than the one using direct questioning.

3 Experimental design and conditions

We employed an experimental design with two main factors: one being the social norm treatment (three treatments and one control condition) and two being the sensitive question technique employed (direct questioning, DQ, or a crosswise-model RRT implementation, CM).

Figure 1: Experimental design and conditions

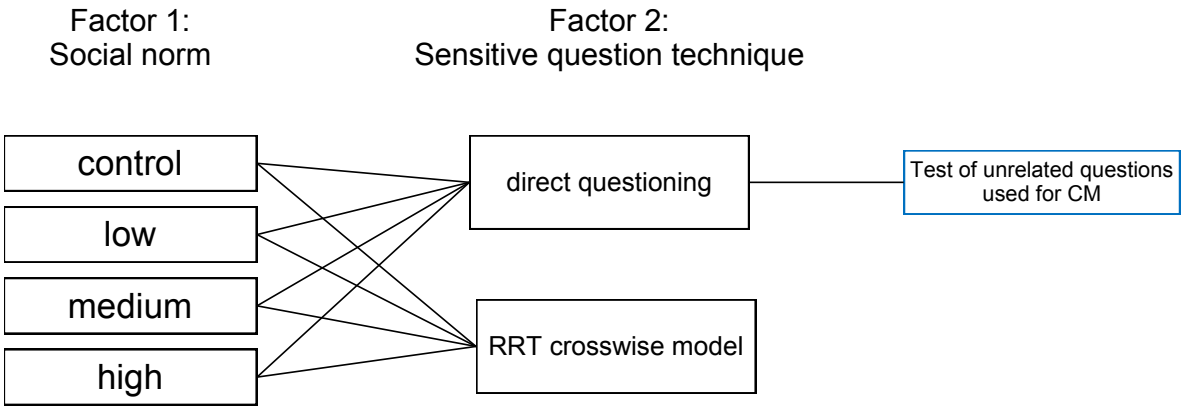

Figure 1 depicts the experimental factors, the different conditions and their possible combinations. In the remainder of this chapter, we describe each factor and the corresponding conditions in detail.

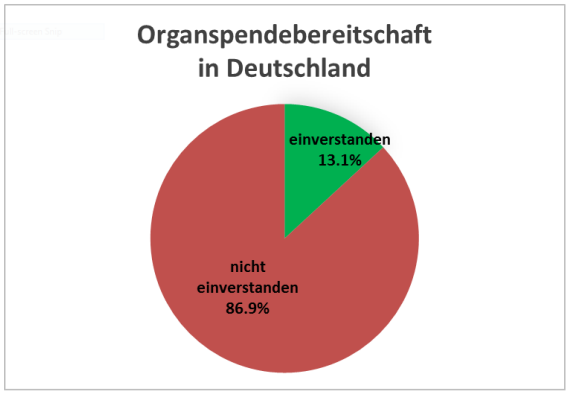
3.1 Social norm treatment

Participants were randomly assigned to one of three social norm treatments with different information on the general organ-donation willingness in the German population: low with 13.1% of the population agreeing, medium with 60.3%, and high with 80.4% agreeing. Figure 2 shows the screens presented to respondents in the different treatments. In addition, there was a control group that was not displayed any information. The figures were all based on real results of representative surveys and have been simplified in order to preserve experimental comparability of the treatments.

3.2 Sensitive question techniques conditions

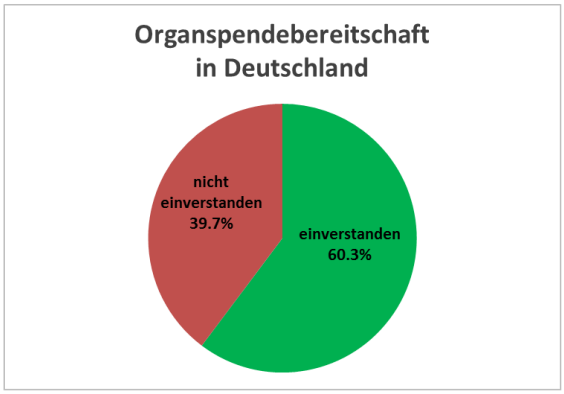
To evaluate the sensitive question techniques, respondents were asked five sensitive questions. For these, respondents were randomly assigned to one of two different sensitive question techniques: Direct questioning, or CM. In the CM condition, a trial question on whether respondents had achieved the "Abitur" (the general university entrance qualification) was asked prior to the sensitive questions. The trial question was also displayed to respondents assigned to the DQ condition as a normal question later on in the questionnaire to allow comparison. Table 3 lists the sensitive items and their corresponding wording. The items were randomized across pages (except the trial question which always came first). In addition, half the respondents were shown a “don’t know”-response option for all sensitive questions, half were not (condition coded in *sensdk*).

Eine repräsentative Befragung in ganz Deutschland hat ergeben, dass **13,1% der Bevölkerung damit einverstanden sind, dass man ihnen nach dem Tod Organe und Gewebe entnimmt**.



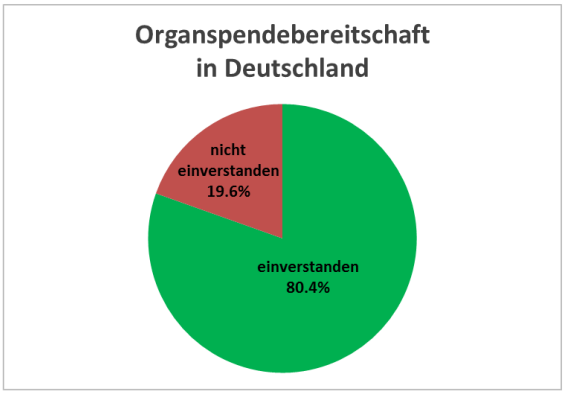
(a) low

Eine repräsentative Befragung in ganz Deutschland hat ergeben, dass **60,3% der Bevölkerung damit einverstanden sind, dass man ihnen nach dem Tod Organe und Gewebe entnimmt**.



(b) medium

Eine repräsentative Befragung in ganz Deutschland hat ergeben, dass **80,4% der Bevölkerung damit einverstanden sind, dass man ihnen nach dem Tod Organe und Gewebe entnimmt**.



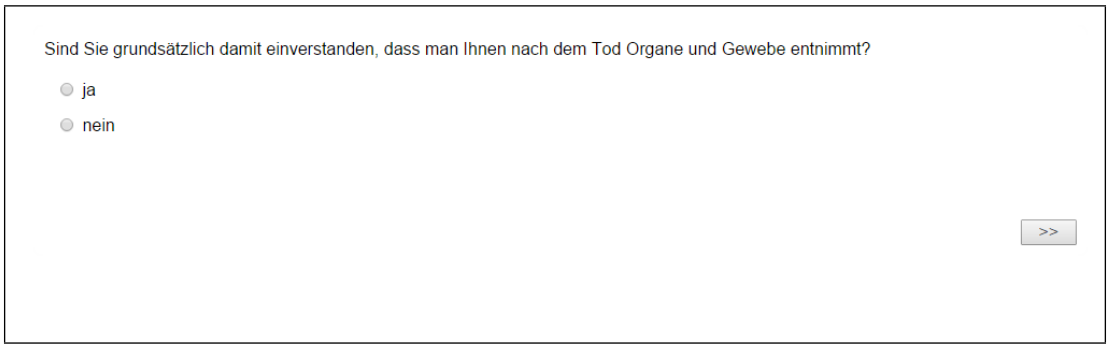
(c) high

Figure 2: Social norm treatment

Table 3: Sensitive items

Item	Wording
blood	Have you ever donated blood?
organ	Are you willing to donate your organs or tissues after death?
recipient	Have you ever received a donated organ (kidney, heart, part of a lung or liver, pancreas)?
chagas	Have you ever suffered from Chagas disease (Trypanosomiasis)?
drinks	In the last two weeks, have you had five or more drinks in a row (a drink is a glass of wine, a bottle of beer, etc.)?

Figure 3: Direct questioning



3.2.1 Direct questioning

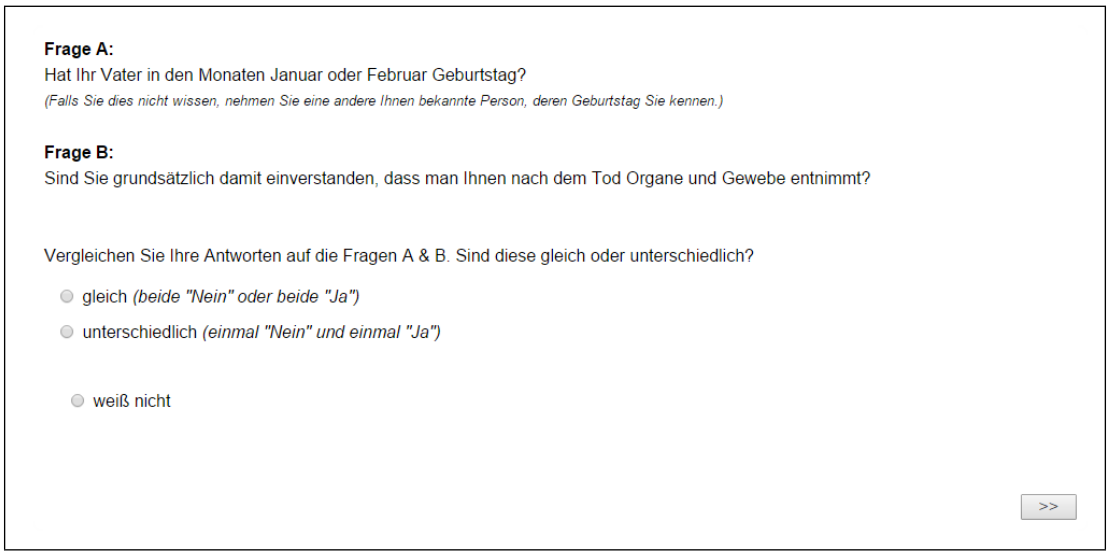
The sensitive items were preceded by a screen announcing some sensitive questions, stating the importance of honest answers for the success of the study and providing some privacy assurance. Figure 3 is a screen shot of the first sensitive item as presented in the direct questioning condition.

3.2.2 CM

The CM condition is an implementation of the crosswise-model RRT variant with an unrelated question as used in Jann et al. (2012) or Höglinger et al. (2014a). Respondents were asked two questions at the same time: A sensitive question and an unrelated non-sensitive question. Respondents then had to indicate whether their answers to the two questions were identical (both “no”, or both “yes”) or different (one “yes”, the other “no”) (see figure 4).

Due to the mixing with the nonsensitive question, a respondent’s answer to the sensitive question remains completely private. Nevertheless, at the aggregate level prevalence estimates for the sensitive question are possible because the probability distribution of the unrelated nonsensitive question is known. The unrelated questions used were about the birthdates of respondents’ parents and of a randomly chosen acquaintance. Table 4 lists them together with the theoretical probabilities for a “yes”-answer. Unrelated questions were randomly paired with

Figure 4: CM



the sensitive items for each respondent. Note that half the respondents received unrelated questions with a probability of a "yes" answer of approximately .15 to .20, the other half received the inverted questions with a "yes" answer probability of .80 to .85. The corresponding condition is coded in *pleveluq*. Remember that, as in the DQ condition, half the respondents were shown a "don't know" response option, whereas the other half were not.

The crosswise-model RRT procedure was carefully introduced to respondents. On the first screen, we outlined the procedure and gave a short explanation of how the technique protects individual answers. In addition, respondents were referred to a Wikipedia article on the Randomized Response Technique for further information which they could access by clicking on a button (see the questionnaire in appendix A.2). Whether respondents actually clicked on the button or not is recorded in *q9link*. On the second screen, respondents were displayed a trial question on whether they had accomplished the "Abitur". Then, the actual sensitive items followed.

3.2.3 Design parameters

To analyze the data collected using the RRT, the corresponding design parameters must be known. For the forced response RRT there are two design parameters p^{yes} and p^{no}, the probability of a direct or unrelated "yes" and the probability of a direct or unrelated "no". For the crosswise-model RRT there is one design parameter p^{cm}, the probability of a "yes" answer to the unrelated question. For an overview of basic formulas for analyzing RRT data, see e.g. Krumpal et al. (2014). Regression estimators for RRT data are provided by Jann (2005, 2008).

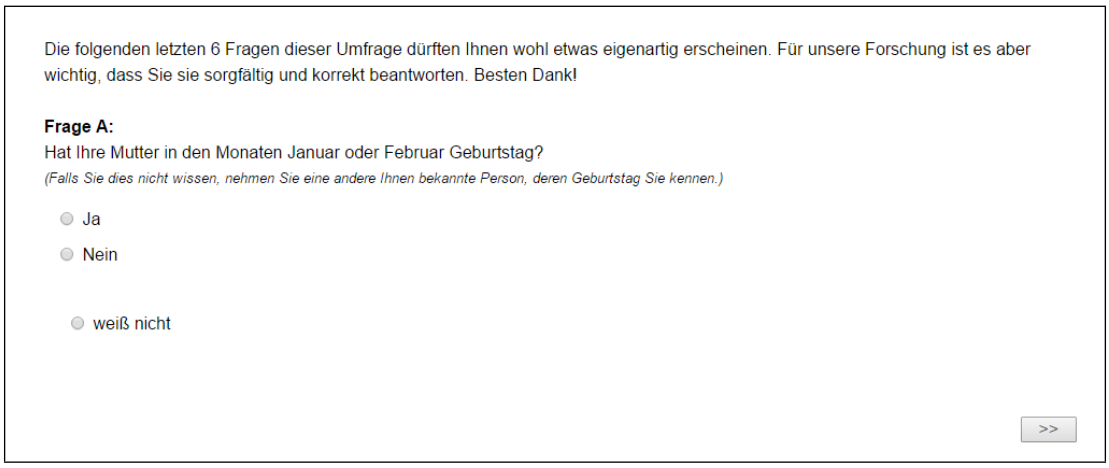
The design parameters can be reconstructed from the descriptions of the CM implementation above. For the sake of convenience variables holding the design parameters for each sensitive item are included in the dataset. For direct questioning, the parameters were set to $p^{\text{yes}} = p^{\text{no}} = 0$ and $p^{\text{cm}} = 1$, which is useful for joint analyses across experimental conditions.

Table 4: Unrelated questions for CM

No.	Wording	"yes" probability
1	Is your mother's birthday in January or February?	0.159
2	Is your mother's birthday between the 1^{st} and the 6^{th} of the month (including the 1^{st} and 6^{th})?	0.197
3	Is your father's birthday in January or February?	0.159
4	Is your father's birthday between the 1^{st} and the 6^{th} of the month (including the 1^{st} and 6^{th})?	0.197
5	Think of an acquaintance of yours whose birthday you know: Is this person's birthday in January or February?	0.159
6	Think of an acquaintance of yours whose birthday you know: Is this person's birthday between the 1^{st} and the 6^{th} of the month (including the 1^{st} and 6^{th})?	0.197
7	Is your mother's birthday in the months of March to December?	0.841
8	Is your mother's birthday between the 7^{th} and the 31^{st} of the month (including the 7^{th} and 31^{st})?	0.803
9	Is your father's birthday in the months of March to December?	0.841
10	Is your father's birthday between the 7^{th} and the 31^{st} of the month (including the 7^{th} and 31^{st})?	0.803
11	Think of an acquaintance of yours whose birthday you know: Is this person's birthday in the months of March to December?	0.841
12	Think of an acquaintance of yours whose birthday you know: Is this person's birthday between the 7^{th} and the 31^{st} of the month (including the 7^{th} and 31^{st})?	0.803

Note: Probabilites calculated assuming a uniform birth distribution

Figure 5: Unrelated questions of CM



3.3 Test of unrelated question outcome distribution

We also tested whether the unrelated questions used as a randomizing device for the CM actually produce the expected outcome distributions. For this, we asked respondents of the DQ condition to answer the same questions we used in the CM condition (see figure 5). This test was introduced as a "seemingly strange" task without detailing the purpose. We employed a procedure as similar as possible and the order of the unrelated questions was also randomized. The data set contains variables indicating the page position as well as the expected probability of a "yes" answer for a particular unrelated questions. Half the respondents received unrelated questions with a probability of a "yes" answer of approximately .15 to .20, the other half the inverted questions with a yes-answer probability of .80 to .85 (condition coded in *pleveluq*). Finally, as in the CM condition, half of the respondents were shown a "don't know" response option, whereas the other half were not.

3.4 Other experimental conditions

We randomized the display order of the questions on the subjective assessment of the opt-in and the opt-out regulation as well as the wording of the question on the preferred regulation (screen 5, condition coded in *q5lawdo*).

The wording of the question on whether declared organ donors should be prioritized over non-donors in case they themselves need a donor organ was randomized: We used a "prioritize" versus a "discriminate" wording (see the questionnaire in appendix A.2, condition coded in *q18wording*)

Note that some questions had a randomized item display order, or a randomized response option order. If so, the corresponding randomization data can be found in the dataset right after the corresponding variable.

A.1 Study invitation

E-Mail

Lieber PsyWeb-Nutzer, Liebe PsyWeb-Nutzerin,

Haben Sie sich auch schon Gedanken zur Organspende gemacht? Wir laden Sie ein zu einer Befragung zu Einstellungen und Verhalten bezüglich Organspende und Gesundheit, die wir am Lehrstuhl für Soziologie der ETH Zürich durchführen.

Ihre Teilnahme ist für die Aussagekraft unserer Studie sehr wichtig - und hoffentlich auch für Sie interessant. Die Beantwortung der Fragen dauert 8 bis 10 Minuten.

Als kleine Wertschätzung verlosen wir 5 mal 100€ unter allen Studienteilnehmerinnen und -teilnehmern.

Klicken Sie zum Start der Befragung hier:
https://psyweb.uni-muenster.de/invitations/startSurvey/direct/e573df3b-cc96-4dc1-822b-803f236c71e9

Alternativ können Sie sich auch auf folgender Seite einloggen und die Studie im PsyWeb Portal starten.
https://psyweb.uni-muenster.de/invitations/startSurvey/218

Alle Angaben werden vertraulich behandelt und anonymisiert, so dass keinerlei Rückschlüsse auf einzelne Personen möglich sind. Zwei Wochen nach Abschluss der Befragung werden wir erste Resultate auf unserer Homepage aufschalten - über Ihr Interesse würden wir uns freuen!

Vielen Dank!

Andreas Diekmann
Marc Höglinger
In Zusammenarbeit mit dem PsyWeb-Team

Page 2: Organ donation attitude

Man kann Organ- und Gewebespender werden, wenn man sich bereit erklärt, nach dem Tod seine Organe, z.B. für Nieren-, Leber- oder Herzverpflanzungen, oder seine Gewebe zur Verfügung zu stellen.

Was halten Sie generell von Organ- und Gewebespende? Stehen Sie dem eher positiv oder eher negativ gegenüber?

- sehr positiv
- eher positiv
- teils, teils
- eher negativ
- sehr negativ

Haben Sie mit Ihrer Familie und/oder Freunden schon einmal über Organspende gesprochen?

- ja
- nein

Haben Sie Ihrer Familie und/oder Freunden Ihre persönliche Entscheidung für oder gegen eine Organspende mitgeteilt?

- ja
- nein

>>

Page 3: Donor card and patient's provision

In Deutschland kann man auf einem Organspendeausweis festhalten, ob einem nach der ärztlichen Feststellung des Todes Organe oder Gewebe für eine Spende entnommen werden dürfen oder nicht. Möglich ist auch, die Spende auf bestimmte Organe oder Gewebe zu beschränken oder eine Person zu bestimmen, die darüber entscheiden soll.

Haben Sie einen solchen Organspendeausweis?

- ja
- nein

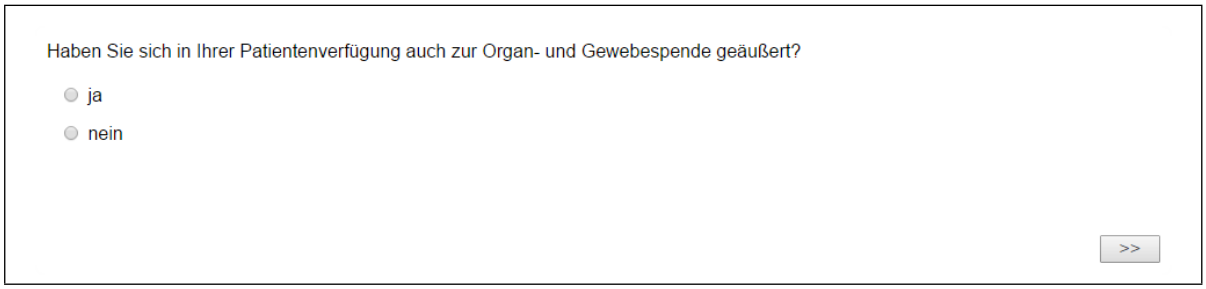
In Deutschland gibt es eine sogenannte „Patientenverfügung". Darin werden Wertvorstellungen und Behandlungswünsche zum Ausdruck gebracht für den Fall, dass der Betroffene – vorübergehend oder dauerhaft – nicht mehr in der Lage ist, bezüglich einer medizinischen Behandlung seine Zustimmung oder Ablehnung direkt kund zu tun.

Haben Sie eine solche Patientenverfügung?

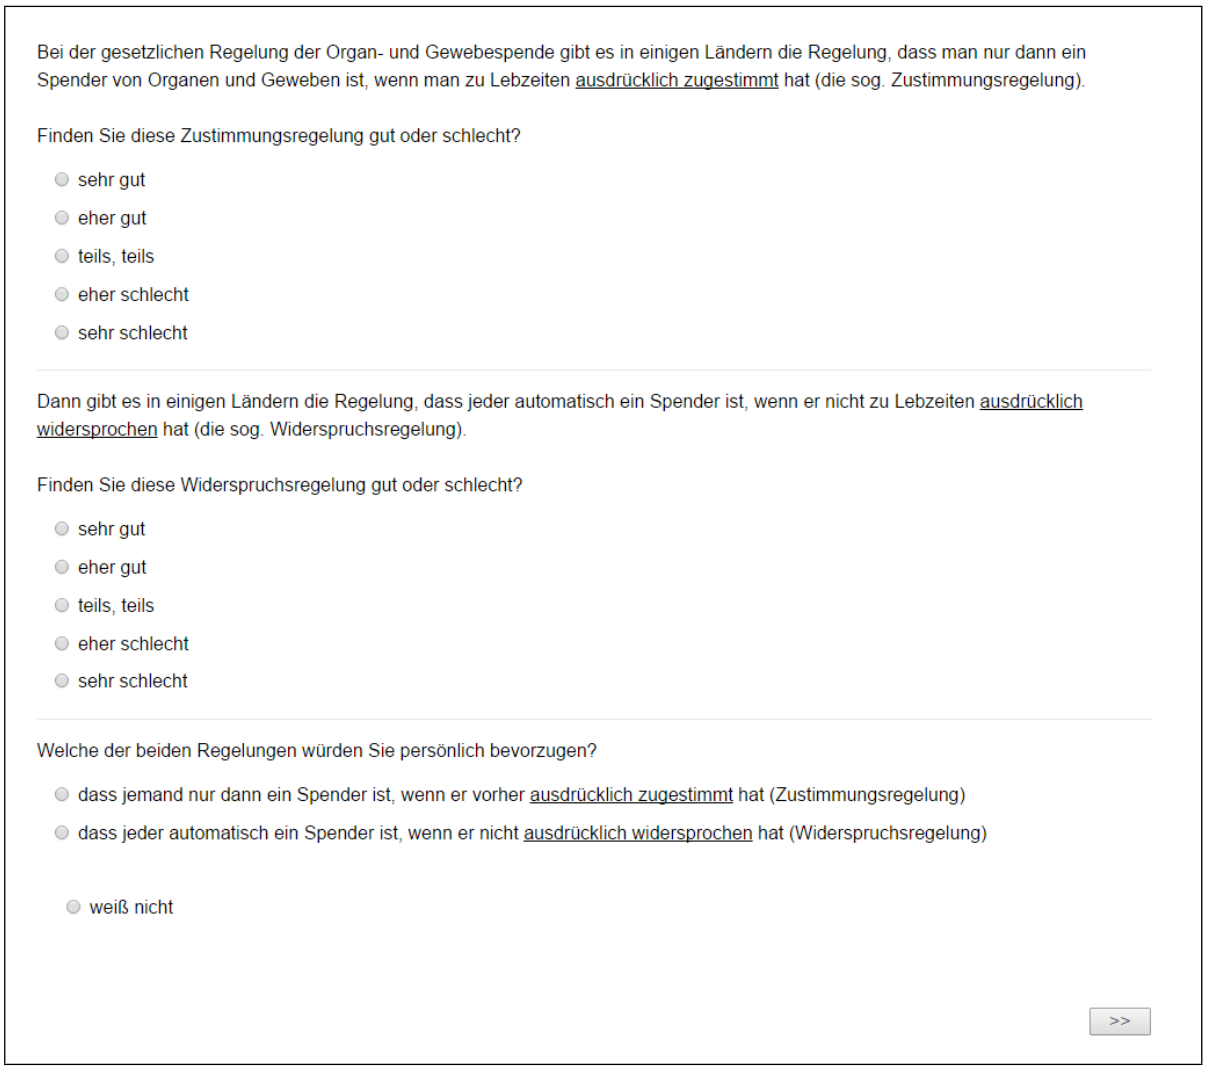
- ja
- nein

>>

Page 4: Donation directives in patient's provision



Page 5: Opt-out and opt-in assessment (if *q5lawdo* is 'in-out')



Page 5: Opt-out and opt-in assessment (if *q5lawdo* is 'out-in', variable coding according to 'in-out')

Bei der gesetzlichen Regelung der Organ- und Gewebespende gibt es in einigen Ländern die Regelung, dass jeder automatisch ein Spender ist, wenn er nicht zu Lebzeiten ausdrücklich widersprochen hat (die sog. Widerspruchsregelung).

Finden Sie diese Widerspruchsregelung gut oder schlecht?

- sehr gut
- eher gut
- teils, teils
- eher schlecht
- sehr schlecht

Dann gibt es in einigen Ländern die Regelung, dass man nur dann ein Spender von Organen und Geweben ist, wenn man zu Lebzeiten ausdrücklich zugestimmt hat (die sog. Zustimmungsregelung).

Finden Sie diese Zustimmungsregelung gut oder schlecht?

- sehr gut
- eher gut
- teils, teils
- eher schlecht
- sehr schlecht

Welche der beiden Regelungen würden Sie persönlich bevorzugen?

- dass jeder automatisch ein Spender ist, wenn er nicht ausdrücklich widersprochen hat (Widerspruchsregelung)
- dass jemand nur dann ein Spender ist, wenn er vorher ausdrücklich zugestimmt hat (Zustimmungsregelung)

- weiß nicht

>>

Page 6: Perceived general norm

Was denkt Ihrer Einschätzung nach die Mehrzahl der Leute in Deutschland: Dass man zu einer Organspende nach dem eigenen Tod einwilligen sollte oder nicht?

- ja, unbedingt
- eher ja
- teils, teils
- eher nicht
- nein, sicher nicht

>>

Page 7: Belief descriptive norm

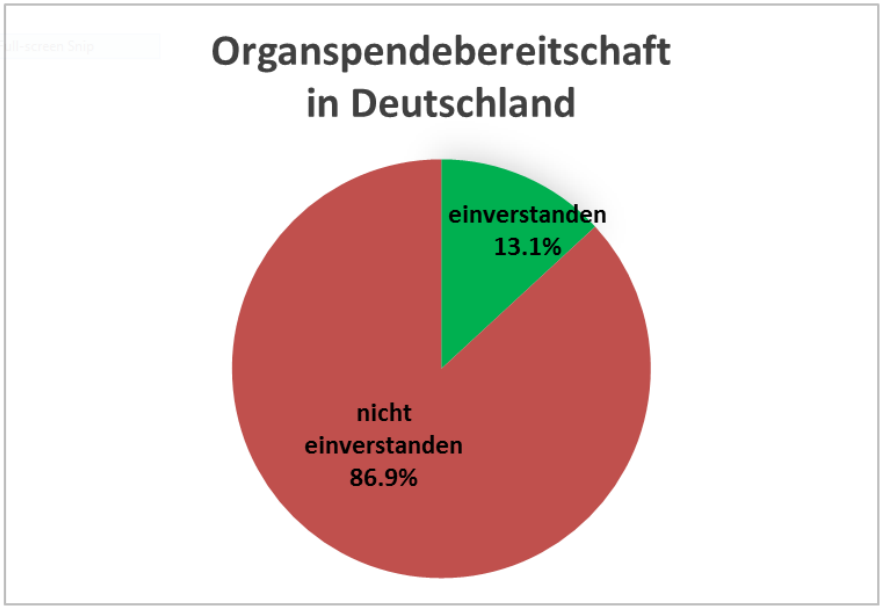
Was denken Sie: Wieviel Prozent der Leute in Deutschland sind grundsätzlich damit einverstanden, dass man ihnen nach dem Tod Organe und Gewebe entnimmt?

____ %

>>

Page 8: Social norm treatment (if *(q8norm)* is 'low')

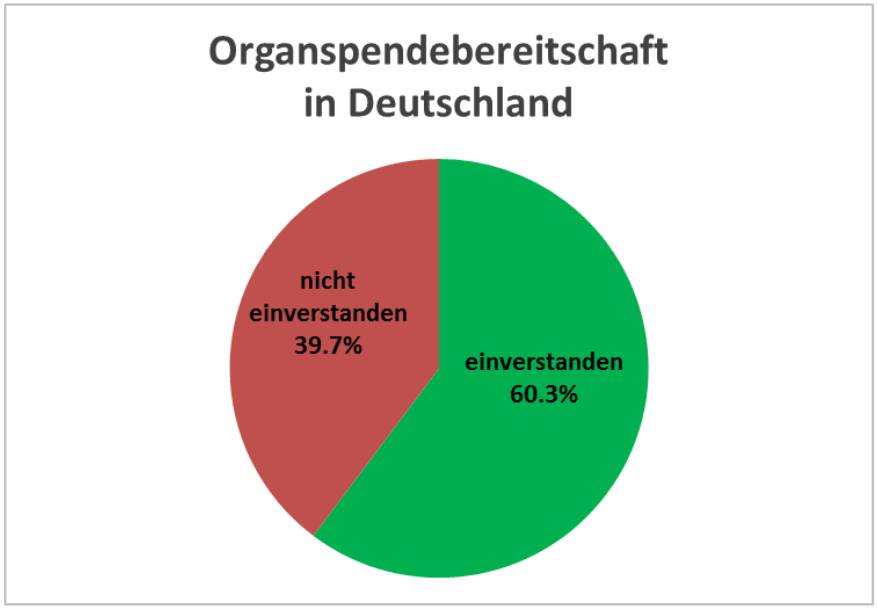
Eine repräsentative Befragung in ganz Deutschland hat ergeben, dass **13,1% der Bevölkerung damit einverstanden sind, dass man ihnen nach dem Tod Organe und Gewebe entnimmt**:



>>

Page 8: Social norm treatment (if *(q8norm)* is 'medium')

Eine repräsentative Befragung in ganz Deutschland hat ergeben, dass **60,3% der Bevölkerung damit einverstanden sind, dass man ihnen nach dem Tod Organe und Gewebe entnimmt**:



>>

Page 9: Intro sensitive items (DQ)

Auf den nächsten Seiten stellen wir Ihnen einige recht persönliche Fragen, deren wahrheitsgetreue Beantwortung für unsere Forschung zentral ist.

Wir möchten Sie nochmals darauf hinweisen, dass Ihre Angaben vertraulich behandelt werden und die Daten nach der Erhebung anonymisiert werden, so dass keinerlei Rückschlüsse auf einzelne Personen möglich sind.

>>

Page 9: Intro sensitive items (CM)

Auf den nächsten Seiten stellen wir Ihnen einige recht persönliche Fragen, deren wahrheitsgetreue Beantwortung für unsere Forschung zentral ist.

Damit Ihr Persönlichkeitsschutz bedingungslos sichergestellt ist, verwenden wir eine spezielle Befragungsmethode, bei der Ihre Angaben jederzeit zu 100% geheim bleiben.

Das Ganze funktioniert so: Sie beantworten jeweils zwei Fragen A und B still für sich und geben dann nur an, ob die Antworten auf die beiden Fragen...

- gleich *(beide "Nein" oder beide "Ja")* oder
- unterschiedlich *(einmal "Nein" und einmal "Ja")* waren.

Ihre Antwort auf eine einzelne Frage ist so auch für uns Forscher nicht ersichtlich. Aber für alle Teilnehmemenden dieser Umfrage zusammen können wir den prozentualen Anteil der Ja- und Nein-Antworten korrekt statistisch berechnen.

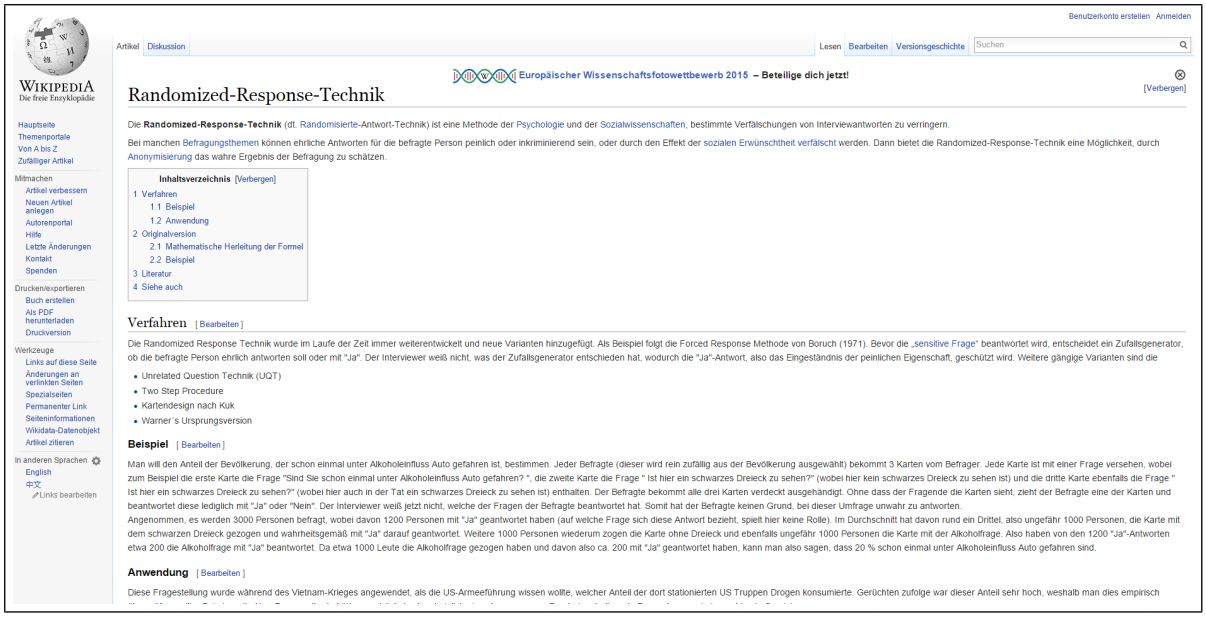
Damit das Verfahren funktioniert, sind wir darauf angewiesen, dass Sie das Vorgehen genau befolgen. Danke für Ihre Mithilfe!

Auf der nächsten Seite stellen wir Ihnen eine Übungsfrage, damit Sie die spezielle Befragungsmethode kennen lernen. Anschliessend folgen fünf Fragen, die wir mit der speziellen Methode erheben.

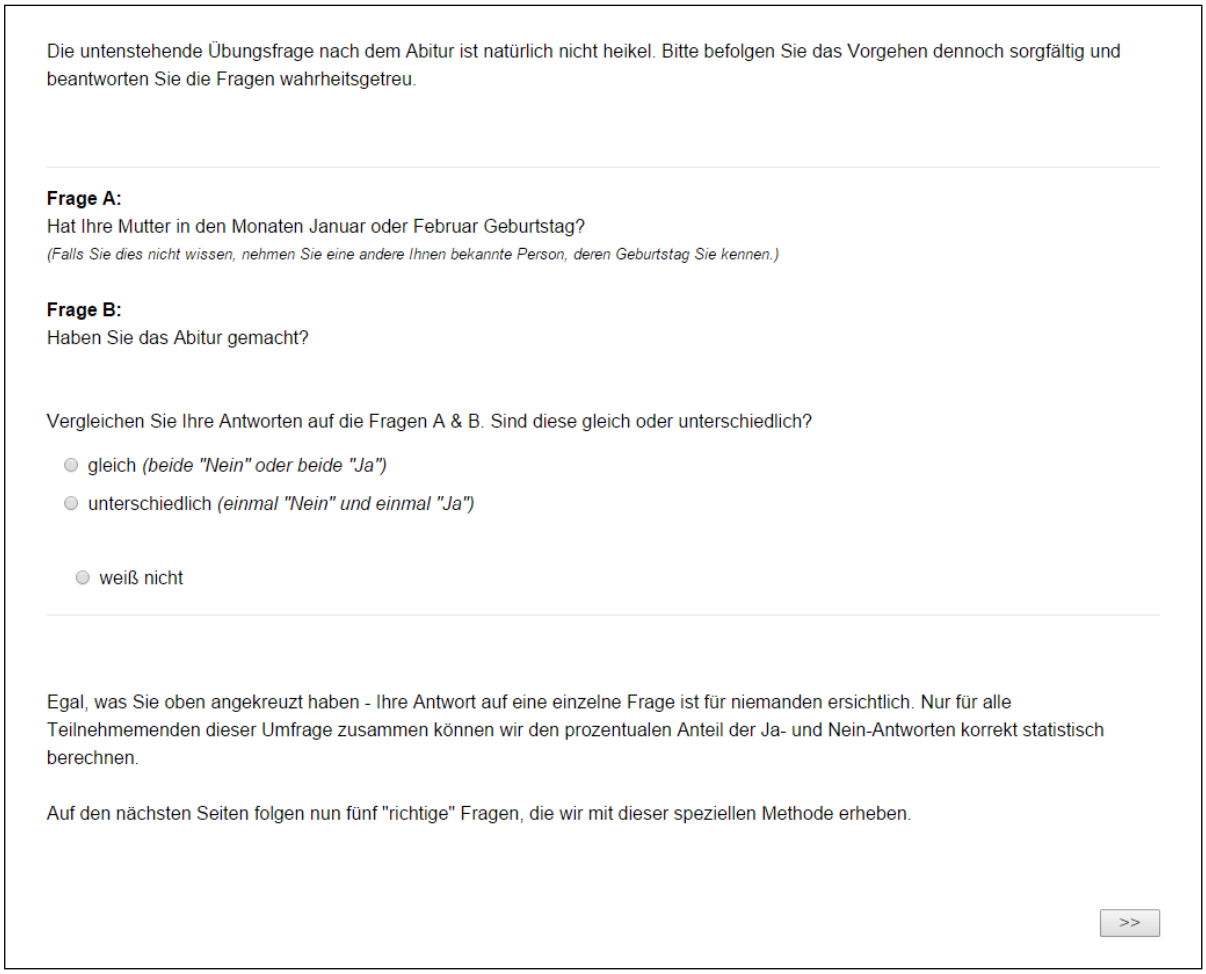
Ausführlichere Informationen zur Methode finden Sie in diesem Wikipedia-Artikel: zum Artikel

>>

Page 9: Intro sensitive items (page displayed if clicked on button 'zum Artikel' CM)



Page 10: Trial question CM (only CM, coded in variable 'diploma'))



Die untenstehende Übungsfrage nach dem Abitur ist natürlich nicht heikel. Bitte befolgen Sie das Vorgehen dennoch sorgfältig und beantworten Sie die Fragen wahrheitsgetreu.

Frage A:
Hat Ihre Mutter in den Monaten Januar oder Februar Geburtstag?
(Falls Sie dies nicht wissen, nehmen Sie eine andere Ihnen bekannte Person, deren Geburtstag Sie kennen.)

Frage B:
Haben Sie das Abitur gemacht?

Vergleichen Sie Ihre Antworten auf die Fragen A & B. Sind diese gleich oder unterschiedlich?

- gleich *(beide "Nein" oder beide "Ja")*
- unterschiedlich *(einmal "Nein" und einmal "Ja")*

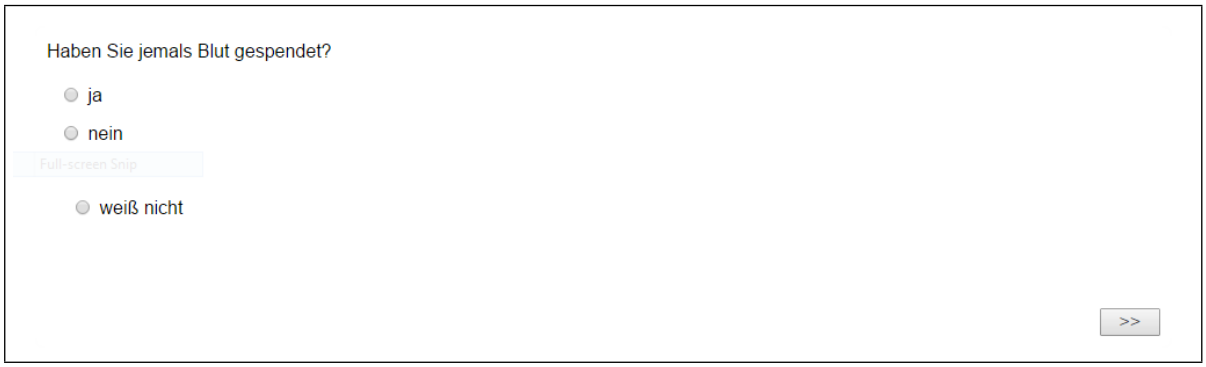
- weiß nicht

Egal, was Sie oben angekreuzt haben - Ihre Antwort auf eine einzelne Frage ist für niemanden ersichtlich. Nur für alle Teilnehmemenden dieser Umfrage zusammen können wir den prozentualen Anteil der Ja- und Nein-Antworten korrekt statistisch berechnen.

Auf den nächsten Seiten folgen nun fünf "richtige" Fragen, die wir mit dieser speziellen Methode erheben.

>>

Page 11: Sensitive question 1 (DQ, item 'blood')



Haben Sie jemals Blut gespendet?

- ja
- nein

- weiß nicht

>>

Page 11: Sensitive question 1 (CM, item 'blood')

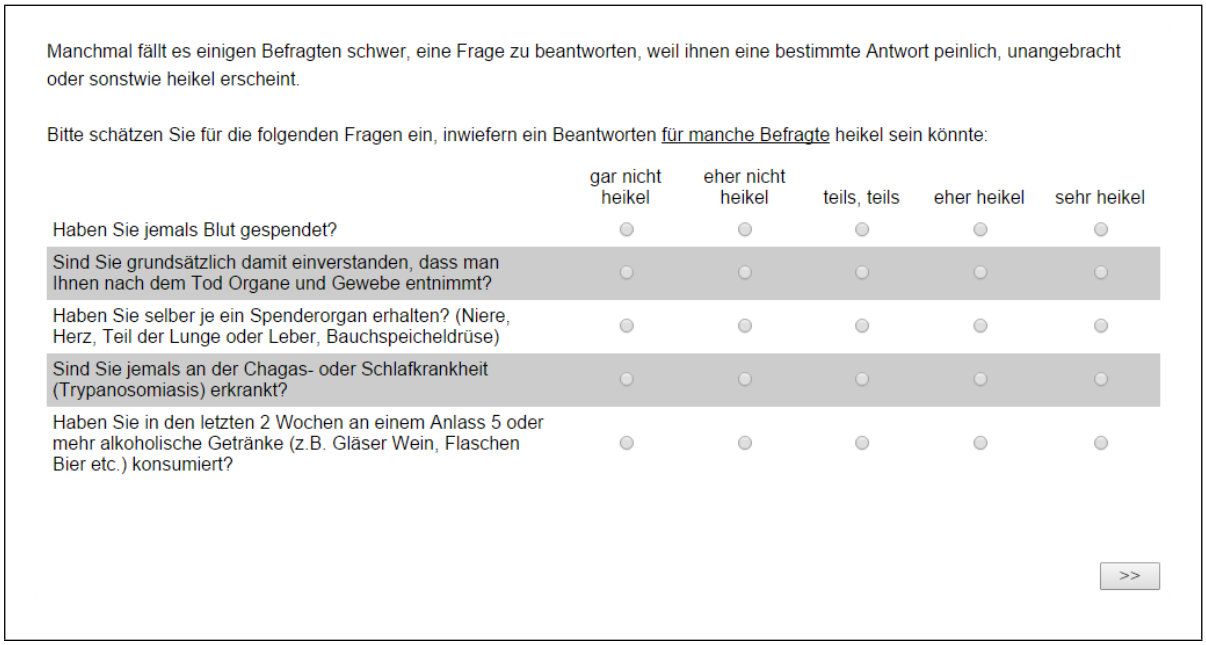
Inwiefern treffen die folgenden Aussagen auf Sie persönlich zu oder nicht?

	trifft zu	trifft nicht zu
Manchmal bin ich beleidigt, wenn es nicht nach meinem Willen geht.	○	○
Ich bin stets ein guter Zuhörer, gleichgültig, wer mein Gesprächspartner ist.	○	○
Bei Gelegenheit habe ich schon einmal jemanden ausgenützt.	○	○
Wenn ich einen Fehler gemacht habe, bin ich stets bereit, das zuzugeben.	○	○
Ich halte mich immer selber an Grundsätze, deren Befolgung ich von anderen erwarte.	○	○
Ich bin stets höflich, selbst zu Leuten, die ich abstoßend finde.	○	○
Manchmal bin ich ärgerlich auf Leute, die mich um einen Gefallen bitten.	○	○

>>

Page 24: Item sensitivity (item-order randomized)



Manchmal fällt es einigen Befragten schwer, eine Frage zu beantworten, weil ihnen eine bestimmte Antwort peinlich, unangebracht oder sonstwie heikel erscheint.

Bitte schätzen Sie für die folgenden Fragen ein, inwiefern ein Beantworten für manche Befragte heikel sein könnte:

	gar nicht heikel	eher nicht heikel	teils, teils	eher heikel	sehr heikel
Haben Sie jemals Blut gespendet?	○	○	○	○	○
Sind Sie grundsätzlich damit einverstanden, dass man Ihnen nach dem Tod Organe und Gewebe entnimmt?	○	○	○	○	○
Haben Sie selber je ein Spenderorgan erhalten? (Niere, Herz, Teil der Lunge oder Leber, Bauchspeicheldrüse)	○	○	○	○	○
Sind Sie jemals an der Chagas- oder Schlafkrankheit (Trypanosomiasis) erkrankt?	○	○	○	○	○
Haben Sie in den letzten 2 Wochen an einem Anlass 5 oder mehr alkoholische Getränke (z.B. Gläser Wein, Flaschen Bier etc.) konsumiert?	○	○	○	○	○

Für die Verlosung der 5 mal 100€ werden nach Abschluss der Befragung 5 Teilnehmerinnen bzw. Teilnehmer zufällig ausgewählt und vom Lehrstuhl für Soziologie der ETH Zürich kontaktiert.

Dazu müssen Sie einwilligen, dass Ihre Email-Adresse im Falle eines Gewinnes von PsyWeb an den Lehrstuhl für Soziologie der ETH Zürich weitergegeben werden darf.

Ihre Email-Adresse wird ausschliesslich für die Abwicklung der Gewinnauszahlung benutzt. Die Anonymität der Befragungsdaten bleibt jederzeit gewährleistet.

- ○ Ja, ich möchte an der Verlosung teilnehmen und willige ein.
- ○ Nein, ich möchte nicht an der Verlosung teilnehmen und willige nicht ein.

Besten Dank!

Falls Ihre anonyme Teilnehmer-ID bei der Verlosung ausgewählt wird, übermitteln wir diese zusammen mit den anderen Gewinnern an PsyWeb. PsyWeb wird uns dann Ihre Mailadresse übergeben und wir kontaktieren Sie. Sie brauchen nichts weiter zu unternehmen.

Viel Glück bei der Verlosung!

Bitte Klicken Sie auf >> um die Umfrage abzusenden.

q37 — Respondent's comments

		Count	Percent	Valid %	Cum. %
Valid	"Denken Sie an einen guten Bekannten, dessen Geburtstag Sie kennen: Hat diese Person vom 1. bis und mit 6. des Monats Geburtstag?" Man sagt eher "zwischen dem 1. und 6. de Monats" (wenn Sie das meinten). Diese Formulierung ergibt absolut keinen Sinn, auchwenn man sich denken kann, was gemeint sein soll. Ansonsten sehr spannend! Ich finde es gut, wie verstärkt dem Thema Aufmerksamkeit geschenkt wird.	1	0.06	0.31	0.31
	-	1	0.06	0.31	0.62
	- unter "Anstellungsart" fehlt "Student" - bei den "Heikel" - Fragen: Für mich würde es einen Unterschied machen, ob ich die Aussage vor Freunden, Fremden etc. treffen sollte.	1	0.06	0.31	0.93
	⋮	⋮	⋮	⋮	⋮
	was ist der Zeitraum vom 7. bis und mit 31. ??!! total unverständlich im BRD Sprachraum ... vielleicht in CH eher verständlich ...	1	0.06	0.31	99.38
	wo kann man das ergebnis nachlesen?	1	0.06	0.31	99.69
	zwei antwortmöglichkeiten ("trifft zu - trifft nicht zu") sind zu wenig.	1	0.06	0.31	100.00
