Project Code: MITU0042
Project Name: State SPAE
Prepared for: Charles Stewart
Interviews: 10200
Field Period: November 09, 2022 - December 14, 2022
Project Manager: Sara Sermarini, sara.sermarini@yougov.com
==========

YouGov interviewed 11,675 respondents who were then matched down to 200 respondents per state plus the District of Columbia to produce sample of 10,200 in the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frames were constucted by using different subsets of a politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2020 Presidential vote choice and multiple variations of stratification of gender, age (4-categories), race (2 or 4 categories), and education (4-categories), to produce the 51 state weights.

The 51 states were stacked and State RV weights was produced.

In addition, the stacked dataset was then post-stratified on 2020 Presidential vote choice and state of residence to produce a Nationally Representative RV weight.
