Project Code: STAN0089_CODEBOOK_all
Project Name: News Consumption
Prepared for: Shanto Iyengar
Interviews: 7704
Pre-Election Wave Field Period: July 7, 2016 - September 26, 2016
Post-Election Wave Field Period: November 18, 2016 - December 7, 2016
Project Manager: Ashley Grosse - 650.462.8016
==========

YouGov interviewed 7704 respondents who responded to both pre- and post-election waves of the study. Two sets of weights were generated, one for all 7704 respondents, and one for the 1076 respondents also participating in YouGov Pulse web tracking.

The sampling frame used was constructed by stratified sampling from the full 2010 American Community Survey (ACS) sample, with selection within strata by weighted sampling with replacements (using the person weights on the public use file). Data on voter registration status and turnout were matched to this frame using the November 2010 Current Population Survey. Data on interest in politics and party identification were then matched to this frame from the 2007 Pew Religious Life Survey.

For each set of weights, the applicable cases were weighted to the sampling frame using propensity scores. The sample cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, geographic region, and ideology. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. Lastly, a four-way post-stratification on 4-category age, gender, 4-category race, and 4-category education level was applied to produce the final weight.
