Section V: Preferences for Biodegradable Implants

Interviewer: Now I would like to introduce a new contraceptive implant to you known as a biodegradable implant. Look at this product profile, which we'll read through together and discuss.

Sehemu ya V: Mapendelo ya Mapachiko yenye uwezo wa kumumunyika

Mhoji: Sasa ningependa kukutambulisha pachiko la kuzuia kupata mimba mpya inayojulikana kama pachiko lililo na uwezo wa kumumunyika. Angalia wasifu wa bidhaa hii, ambayo tutasoma pamoja na kujadili.

BDI Profile: The Biodegradable Implant, or "BDI", does not yet exist, but is a new contraceptive method under development that prevents pregnancy when used as recommended. The BDI is similar to existing implants in the way it is inserted or administered (with inserter device by trained provider), its high level of safety, high efficacy in preventing pregnancy, and side effects (bleeding or other). It would be available in the same places you can currently get other contraceptive implants.

The BDI is different from existing implants in the following ways:

- It does not last as long as existing implants (24 months)
- It does not *need* to be removed because it will slowly dissolve under your skin (kind of like how a sweet dissolves in the mouth)
- It *can* be removed if you choose. Removal is possible up until 21months of use (3 months before it stops working)
- It may be narrower or shorter than existing implants

Wasifu wa BDI: Pachiko lililo na uwezo wa kumumunyika, au "BDI", bado haliko lakini ni njia mpya ya kuzuia mimba inayozuia mimba wakati inapotumiwa ilivyopendekezwa. BDI ni sawa na pachiko lililopo kwa sasa kwa njia inayo ingizwa au kuwekwa (ikiwa na kifaa cha kuingizia na muuzaji aliyefunzwa), usalama wake wa hali ya juu, ufanisi wake wa hali ya juu kuzuia mimba, na madhara (kutoka damu au mengine). Litapatikana katika mahali pale pale ambapo unaweza kupata mapachiko mengine ya kuzuia mimba.

BDI ni tofauti na mapachiko yaliyopo kwa njia zifuatazo:

- Haidumu kwa muda mrefu kama mipachiko iliyopo (miezi 24)
- Haihitaji kutolewa kwa sababu itamumunyika polepole chini ya ngozi yako (kamavile peremende inavyomumunyika mdomoni)
- Inaweza kutolewa ukichagua. Kutolewa inawezekana hadi miezi 21 ya matumizi (miezi 3 kabla ikome kutumika)
- Inaweza kuwa nyembaba au fupi kuliko mapachiko yaliyopo.
