Who gets what – and how efficiently?
Assessing the spatial allocation of public goods
Explanatory Memo

This submission includes the following files:

- `vfm_dataset_clean_small_2.dta`
- `gen_efficiency_scores.R`
- `Log_file.txt`

`vfm_dataset_clean_small_2.dta` is the dataset used to generate the efficiency scores presented in the manuscript.

`gen_efficiency_scores.R` is `R` code with commands to generate the efficiency scores presented in the manuscript. I use the `dea.boot` command in the `R` package `Benchmarking`. I use `R` version 3.6.1 (2019-07-05) – "Action of the Toes."

`Log_file.txt` is the log file with the output generated in `R` by running `gen_efficiency_scores.R`
