Public Warnings and Evacuations: A Study of the 2009 California Station Fire

Variables & Inclusion Criteria

Version 1

June, 2011

START National Consortium for the Study of Terrorism and Responses to Terrorism

A CENTER OF EXCELLENCE OF THE U.S. DEPARTMENT OF HOMELAND SECURITY BASED AT THE UNIVERSITY OF MARYLAND

METHODOLOGY

The Public Opinion Research Laboratory at the University of North Florida (a twenty-seven station polling facility located in Jacksonville, Florida) conducted a telephone survey of residents of Los Angeles County and the vicinity, targeting specific areas that were most impacted by the August 2009 Station Fire.

Respondents were identified through the use of a Random-Digit-Dial (RDD) list provided by Marketing Systems Group and Genesys Sampling, in which all landline telephone numbers within the sampling area have an equal chance of selection. The survey covered individuals aged eighteen and older in the Station Fire-affected areas of California.

The fire-affected area included 160,000 acres in California and the demographics from the survey resemble the community of La Cañada Flintridge, California. This community is north of the city of Los Angeles, borders the communities of Glendale and Pasadena, and is directly adjacent to the Angeles National Forest, just south of the Station Fire perimeter.
