VARIABLE CODEBOOK

STANDARDIZED RESEARCH DATA FILES
1991-1998

INTRODUCTION

This codebook contains information on variables which come directly from the Monitoring Department's database (USSCFY91-USSCFY98), as well as variables created by the Office of Policy Analysis (OPA) specifically for research purposes. Datasets prior to 1991 do not contain many important guideline application variables, therefore, these datasets are not covered by this codebook.

The first column in the codebook, NAME, lists the SAS name of the each variable in alphabetical order. Under the monitoring variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name. Many of the Chapter Two variables that come to us from Monitoring have been renamed since 1995 when the new guideline coding system was introduced. The Monitoring Department began to include a "S" on the end of all the sentencing variables. We have deleted this "S" so that the variable names will stay the same across all years covered in this codebook.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from a specific monitoring module, generated from the Monitoring database, or produced by OPA SAS code. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Presentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA means the information comes primarily from the plea agreement.
- PLEA/PSR says the information comes from the plea agreement if present, or the PSR if not present.
- SENT indicates the information comes primarily from the resentencing documents.
- WKSHT means the information comes from the worksheets completed by the probation officers.
- GENER means the information is generated in Monitoring from other coded variables.

The third column, FORM, describes whether the variable is coded as numeric (NUM) or character (CHAR). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in the coding attachment at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or are not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements in SAS from the Sun station. The user will type "FORMAT VARIABLENAME BOLDNAME.;" to use these format statements (Note the need for a $ sign when formatting character variables). Since format statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Other sections have been included after the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook. After the code attachment, the code for creating each research variable from the monitoring variables is included. A special section containing helpful SAS fragments has also been added. Additionally, an index has been created to facilitate finding any and all references to a particular variable. Both variables names (ex. MONSEX) and subject headings (ex. GENDER) have been included.

A label feature functions with the OPA sun station. When you submit any procedure to the sun station, variable labels will automatically be printed alongside the variable name on all output. These labels describe each variable to anyone looking at a printout who may not be familiar with the dataset.

EXPLANATION OF THE GUIDELINE CODING SYSTEM (IMPLEMENTED IN 1995):

In 1995, a new coding system was implemented by the Monitoring Department in order to more accurately capture the guideline cross reference system. The Monitoring Department now codes four types of guidelines: Statutory, Reference, Sentencing, and Underlying.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTAT5, GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the ***USSG Manual***. Only the guideline is captured for GDSTAT (i.e. no base offense level or adjustments).

The next guideline is the reference guideline (GDREF1-GDREF5, GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the USSG Manual to 2D1.6 (the GDSTAT1 guideline). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (i.e. base offense level and adjustments).

The guideline which best explains the sentence (i.e. the last guideline which increases or decreases levels) is known as the sentencing guideline (GDLINE1-GDLINE5, GDLINEHI). The GDLINE will be the same as the GDSTAT if no reference guideline (GDREF) is used (i.e. the probation officer begins and ends at the same guideline, and does not pick up a base offense level or any adjustments from any other guideline). All aspects of GDLINE are coded (i.e. base offense level and adjustments).

The final guidelines recorded are the underlying guidelines (GDUNDRR1-GDUNDRR5, GDUNRRHI and/or GDUNDRS1-GDUNDRS5, GDUNRSHI) when applicable (these guidelines are only used for cases involving the 2X1.1 guideline). GDUNDRR is used when the reference guideline (GDREF) has an underlying guideline which more fully explains the crime (ex. If the GDSTAT was 2X1.1 and the GDREF was 2J1.7, and the GDLINE was 2X1.1, then the underlying offense (GDUNDRS) would be captured as 2D1.1). The same is true for GDUNDRR. Only the guideline is captured for both GDUNDRR and GDUNDRS (i.e. base offense level and adjustments are not coded). This variable is needed in order to fully capture the underlying offense in complex cases involving the 2X1.1 guideline which often involve the coding of multiple guidelines.

EXAMPLES OF THE 1995 GUIDELINE CODING SYSTEM:

1. If the defendant was convicted of selling drugs near a school, then the GDSTATHI would be 2D1.2, the GDREFHI would be 2D1.1, and the GDLINEHI would be 2D1.2. The underlying guidelines, GDUNDRR and GDUNDRS, would be inapplicable.

2. If the defendant was convicted of a conspiracy charge while he had escaped from incarceration, the GDSTATHI would be 2X1.1, the GDREFHI might be 2J1.7, the GDLINEHI would be 2X1.1, and the GDUNRSHI might be 2D1.1 (if the underlying offense was drug trafficking). **NOTE: If the defendant did not receive a 2 level decrease from 2X1.1, then the GDLINEHI would be 2J1.7 because that guideline would provide the last adjustments to the sentence.**

ATTACHMENT II FOR DRUGMIN GUNMIN1 AND GUNMIN2

OPAFY93 - OPAFY97now includes DRUGMIN, GUNMIN1, and GUNMIN2. DRUGMIN represents mandatory minima associated with drug statutes. GUNMIN1 represents mandatory minima associated with 18 924 C, and GUNMIN2 represents mandatory minima associated with 18 924 E.

An edit report is run on the ongoing data files to identify guns and drugs cases as well as a few stray cases with anomalous values. The edit report lists out all cases where DRUGMIN is 997. DRUGMIN has been previously set to 997 through the process described in this writeup. These cases are then turned over to the special projects group for editing through the guns-and-drugs program JSMIN. Once a case has been edited, the values of DRUGMIN, GUNMIN1, and GUNMIN2 will not be reset.

The presence of 997 in DRUGMIN should be taken to mean that the case was a guns and drugs case or problem case as described below and was either not edited or could not be resolved.

At update time in Module 2 and Module 3, the values of DRUGMIN, GUNMIN1, and GUNMIN2 are set through program GUNDRGUP as described below, unless the case has already been edited through JSMIN.

1. The program determines the value of IS924. Codes are as follows:

0 = No 18 924 C or 18 924 E statutes present
1 = Only 18 924 c present
2 = Only 18 924 e present (can include 18 922 g)
3 = 18 924 c and other statutes (no 18 924 e)
4 = 18 924 e and other statutes (no 18 924 c)
5 = 18 924 c and 18 924 e only (can include 18 922 g)
6 = 18 924 e and 18 924 c and other statutes
9 = Missing/indeterminable

2. The program checks the case statutes and determines whether this is a drug case, that is, if the case has been sentenced under any of the statutes listed below. If so, the coder would have been permitted to enter drug types.

1. Any title 21
2. 18 924
3. 18 922
4. 18 1956
5. 18 4
6. 18 371
7. 18 1962
8. 18 545
9. 18 3146
10. 18 1952
11. 46 1903
12. 7 2024 B
13. 18 1343
14. 18 1503
15. 18 201 C1B
16. 18 1905
17. 19 1433 B2B
18. 19 1436 A1
19. 19 1436 C
20. 18 1512 B1
21. 18 3

3. The program determines whether this is a guns-and-drugs case. All of the following conditions must be met:

a. The case was sentenced on or after 10/1/92.

b. At least one of the statutes of conviction is considered to involve drugs as described above.

c. The 18 924 C or E statutes are present, alone or with other statutes (IS924 is 1-6).

d. The statutory minimum (STATMIN) is 1-59, or 61-996.

e. It is not the case that 18 924 E is present without 18 924 C and the statutory minimum is 180.

f. It is not the case that 18 924 C is present without 18 924 E and the statutory minimum is 60.

If this is a guns-and-drugs case, DRUGMIN, GUNMIN1, and GUNMIN2 are set to 997 and will appear on the edit report.

4. If the case does not meet the guns and drugs conditions above, DRUGMIN, GUNMIN1, and GUNMIN2 are reset as follows.

a. If the case was sentenced before 10/1/92, DRUGMIN, GUNMIN1, and GUNMIN2 are set to inapplicable (998).

b. If the statutory minimum (STATMIN) is 0 and there are no 18 924 C or 18 924 E statutes present (IS924 is 0), DRUGMIN, GUNMIN1, and GUNMIN2 are set to 0.

c. If the statutory minimum (STATMIN) is 999, DRUGMIN, GUNMIN1, and GUNMIN2 are set to missing (999).

d. If statute 18 924 C is present alone or with other statutes, but 18 924 E is not present (IS924 is 1 or 3), and the statutory minimum (STATMIN) is 60 months, DRUGMIN and GUNMIN2 are set to 0. GUNMIN1 is set to the statutory minimum.

e. If statute 18 924 E is present alone or with other statutes, but 18 924 C is not present (IS924 is 2 or 4), and the statutory minimum (STATMIN) is 180 months, DRUGMIN is set to 997, and will appear on the edit report. GUNMIN1 is set to 0. GUNMIN2 is set to the statutory minimum.

f. If only statute 18 924 E is present, and the statutory minimum is 60, DRUGMIN, GUNMIN1, and GUNMIN2 are set to 997, and will appear on the edit report.

g. If none of the conditions above have been met, the program temporarily sets DRUGMIN, GUNMIN1, and GUNMIN2 to 997, for possible appearance on the edit report.

h. If the values of DRUGMIN, GUNMIN1, and GUNMIN2 have not been set through steps a - f above, the program carries out the following resetting.

If the case is a drug case, but is not defined as a gun case, and the sentencing date is on or after 10/1/92, and the statutory minimum is positive (STATMIN is 1 to 997), DRUGMIN is set to the statutory minimum. GUNMIN1 and GUNMIN2 are set to 0.
