The effect of breakfast after the bell on student academic achievement

Authors: Andres Cuadros-Meñaca, Michael R. Thomsen, and Rodolfo M. Nayga, Jr.

This paper uses confidential data governed by a data sharing agreement between the University of Arkansas and the Arkansas Department of Education (ADE). Those wishing to access the raw data through a similar agreement can initiate the process with ADE (https://adedata.arkansas.gov/drra/). The authors are willing to assist (Michael R. Thomsen, mthomsen@uark.edu).

The code used in this paper have been prepared using Stata 17 and R version 4.1.0. Note that you need to modify the path to replication folder in each do file.

LIST OF TABLES AND FIGURES WITH CORRESPONDING DO FILES AND SCRIPTS (MAIN DOCUMENT)

A. TABLES

Table 1: Descriptive statistics
- Table 1.do

Table 2: BAB aggregated treatment effect estimates
- Table 2.R

Table 3: BAB aggregated treatment effect estimates
- Table 3.do

Table 4: BAB aggregated treatment effect estimates by economically disadvantaged status
- Table 4.R

Table 5: BAB aggregated treatment effect estimates on attendance
- Table 5.R

B. FIGURES

Figure 1 Arkansas schools offering BAB
- Figure 1.do

Figure 2 Math group-time average treatment effects
- Figure 2.R

Figure 3 ELA group-time average treatment effects
- Figure 3.R

Figure 4 Dynamic average treatment effects
- Figure 4.R

Figure 5 Attendance group-time average treatment effects
- Figure 5.R

In the Appendix, we present additional results under the conditional parallel-trends assumption (Appendix A), results under the unconditional parallel-trends assumption (Appendix B), results under the conditional parallel-trends assumption including in the comparison group the not yet treated (Appendix C), and results under the unconditional parallel-trends assumption including in the comparison group the not yet treated (Appendix D). These results can be obtained using the following files:

TABLES

- Table A1.R to Table A9.R

FIGURES

- Figure A1.R to Figure A52.R
