1 Overview

This folder contains a codebook, a STATA .do file and two STATA data files.

In the beginning of the STATA .do file "Orphans_Replication", change the filepath in global REPDIR to reflect the location of your replication files.

```
/*CHANGE TO REFLECT LOCAL DIRECTORY STRUCTURE*/
global REPDIR = "C:\Users\ecascardi\Desktop\STATA\Orphans
and Schooling\Replication";
```

This global variable defines where the directory sits on your computer. Note that several STATA routines may need to be installed for the programs to run properly.

2 Description of Individual Files

- **"Orphans_Replication.do"**
  Main STATA .do file that uses the two data files to reproduce analysis as published in paper.
- **"data_replication_24jan06_v1.dta"**
  STATA dataset that is used in analysis code to produce analysis as published in paper.
- **"simulation-data_07jan06.dta"**
  STATA dataset that is merged with data-replication_24jan06.dta for noise simulation analysis.
- **"orphans-log.txt"**
  Text file that captures commands and outputs of the STATA analysis file when run.
- **"noise simulation output 11jan06.xls"**
  Output of noise simulation analysis for reference.
