Replication Data for "Rejecting Non-Paternalist Motivation: An Experimental Test"

Xianwen Chen and Øivind Schøyen

April 1, 2021

The data was obtained from the experiment, described in the Appendix C and D of the paper. Qualtrics.com was used to record the responses from the spectator participants.

The data was saved as "01-data-spectators.csv" and is available through Harvard Dataverse.

In addition, the "02-R-codes.R" file contains the R codes that replicate the analyses of the paper, including those in "Appendix C Further Discussion and Further Results". Comments are provided and printed out throughout the R codes.

To run "02-R-codes.R", one needs to open R in the directory where both "01-data-spectators.csv" and "02-R-codes.R" are saved. Alternatively, one can open R first, and then use the *setwd()* function to change to the directory where both "01-data-spectators.csv" and "02-R-codes.R" are saved. Then, run *source("02-R-codes.R")* in R to run the R codes in batch.

The four histograms that are used in the Figure 1 in the paper, will be produced as part of the "02-R-codes.R", into four different PDF files:

- 03-output_from_R_codes-Histogram_Control_Group_No_Redistribution.pdf
- 03-output_from_R_codes-Histogram_Control_Group_Yes_Redistribution.pdf
- 03-output_from_R_codes-Histogram_Treatment_Group_No_Redistribution.pdf
- 03-output_from_R_codes-Histogram_Treatment_Group_Yes_Redistribution.pdf

A copy of these four histogram files are available on the Harvard Dataverse repository, which were produced using the "02-R-codes.R" from R version 4.0.4 on a Linux amd64 machine on April 1, 2021.

Finally, the "03-output_from_R_codes.txt" contains the output from R version 4.0.4 on a Linux amd64 machine on April 1, 2021, in the same process when the four histogram files were created.
