Replicating the results in "Secularism and American Political Behavior" (Geoffrey Layman, David Campbell, John Green, and Nathanael Sumaktoyo) in *Public Opinion Quarterly*

All of the analyses presented in the tables in the body of this article and most of the estimates presented in our online supporting information were conducted with Mplus 8.2. However, the original data files are in Stata format. So, replicating our analyses begins with two Stata do files:

(1) Secularism Survey 2017 do file for the analyses in Tables 1 and 2
(2) Table 3 do file for the analysis in Table 3

These do files create the comma-delimited data files that are used for our Mplus estimation. The do files also include notes on which Mplus input files to run to replicate the analyses in Tables 1-3 of the article and most of the analyses presented in our online supporting information.
