Replication files for: Dependence or constraints? Cash transfers and labor supply

Diego A. Vera-Cossio

November 30, 2020

1 Datasets for estimation

- pooled_hh.dta: repeated cross section of household data. This is the main dataset for most tables and models.
- pooled_children.dta: repeated cross section of children-level data. For panel D in Table 1 and columns 5-8 in Table 4.
- pooled_hh_private.dta: repeated cross sections of households with children enrolled in private schools. For Tables A7 and A9.
- dwelling.dta : Data including predicted per-capita income based on demographic characteristics using 2005's survey wave. Used for Panel B in Table A10.
- pooled_hhrob7-10.dta: repeated cross section of household data. Used for Panel C of Table A4.

2 Replication codes of Tables and Figures in the main text

- All codes for figure and tables are provided. Each code runs one table or figure unless otherwise noted in the title of the file.
- For replication, download the datasets for estimation to your computer's directory and change the path in each do file.

3 Replication codes of Tables and Figures in the Online Appendix

- All codes for figure and tables are provided. Each code runs one table or figure unless otherwise noted in the title of the file.
- For replication, download the datasets for estimation to your computer's directory and change the path in each do file.
- Replication codes for appendix tables are named TA#.do.
- Replication codes for figures are named FA#.do

4 Data cleaning codes ("Replication Files-Codes-Data cleaning")

- The raw data for replication is accessible in this link:`https://www.dropbox.com/s/969t899n2uz3sov/Replication%20Files.zip?dl=0`
- Masterdataprep.do: Cleans up raw survey data from the 2002-2009 waves of Encuesta de Hogares and appends them creating datasets at the household and child level and a dataset for the placebo analysis. It calls the do files data_2002_m.do to data_2009_m.do.
  - Do files data_YYYY_m.do: each do-file renames and records variables such that they are comparable across survey waves.
  - **Resulting datasets:**
    - pooled_hh.dta: repeated cross section of household data.
    - pooled_children.dta: repeated cross section of children-level data.
    - pooled_hh_private.dta: repeated cross sections of households with children enrolled in private schools.
