Ethics Committee of Shanghai Tenth People's Hospital (stamp)

Date: 2020-6-10

Notes: (please read carefully)

1. The project approved by this ethics committee is a biomedical research involving the human subjects. Research must be carried out in accordance with the latest version of the approved research protocol and informed consent, and following the relevant domestic regulations and guidelines.
2. Any content that involves the export of human genetic resources or that must be subject to special approval by relevant departments in accordance with national regulations must be reported to and approved by the relevant authorities before the project is executed.
3. This approval document may be used for reference by other ethics committees. If the other party's review has different opinions, please communicate with this ethics committee in time.
4. Any changes to the approved research protocol, informed consent or other materials or the replacement of the main investigator, must notify the ethics committee in time.
