**** Readme file for the replication package for "Voice and Political Engagement: Evidence From a Field Experiment" ****

This package contains all the files required to replicate the empirical results in the paper and online Appendix. All analysis was conducted using Stata 16. Expected run time of the table and figure generating script is 3 minutes. Expected run time of the cleaning script is 1 minute.

To reproduce the results, replace the path in line 21 of “scripts/master_replication.do” in the scripts subfolder with the directory of the downloaded replication package. This do-files calls all cleaning and results do-files that are needed to reproduce the results in the paper.

Subdirectories:

- *data/raw*: contains the raw datasets used to generate the cleaned data.
1. raw.xslx contains the anonymized raw survey data. The length of comments variable are already cleaned to maintain anonymity.

2. Comments_raw.xslx contains the hand-coded content data for the comments data.

3. doors_clean.csv contains the raw doors data obtained from our partner.

4. voice_vignette.csv contains the raw vignette survey data.

- *data/clean*: contains the cleaned datasets that are the results of the cleaning process.

- *scripts*: Contains all do-files used to generate the results. master_replication.do sets all macros and calls all subscripts. The “scripts/ado” subfolder contains auxiliary .ado files that are used to produce the output. The “scripts/cleaning” subfolder contains the cleaning do-files. The “scripts/tables” subfolder contains the table generating do-files. The “scripts/figures” subfolder contains the figure generating do-files.

- *output*: contains all tables and figures produced by the scripts. These directly correspond to the tables and figures in the paper.
