MA CHOICES Survey 2020-2023 Public Data Set Documentation

June 6, 2025

Study Design:

Using a repeated measures quasi-experimental design, the MA CHOICES study collected survey data between January 2020 and April 2023 in three waves.

Data Collection Methods:

Data were collected via an online survey using REDCap.

Participants:

Participants in this study are state and local public health agency staff and their community partners in Boston and Massachusetts.

Measures:

Measures include self-efficacy of participants related to using cost-effectiveness concepts for decision-making and perceptions of feasibility and acceptability of interventions.

Data Set Contents and Notes:

The public data set includes completed surveys with identifying information removed to protect participant confidentiality. Some participants were surveyed at multiple time points. The public data set does not link participants over time, due to small sample sizes and resulting risk of breaching confidentiality.

Funding:
