README file for replication package of "Limits on Regret as a Tool for Incentive Design"

The replication package contains two datasets and two Stata do-files within Ipython Notebooks:

- **"202410_data_lab.dta"** contains all of the data for the lab experiments conducted at the Pittsburgh Experimental Economics Laboratory (PEEL). The variables are either self-explanatory (i.e., period, value, etc.) or explained in the notebook.
- **"202410_data_online.dta"** contains all of the data for the online experiments conducted on Prolific. The variables are either self-explanatory (i.e., round, conditions, etc.) or explained in the notebook.
- **"202410_analysis_lab.ipynb"** contains all of the Stata code used to generate the tables, graphs, and the statistical tests referenced in the paper. All of the analyses are annotated and appear in the notebook in the same order as they appear in the paper and online appendix.
- **"202410_analysis_online.ipynb"** contains all of the Stata code used to generate the tables, graphs, and the statistical tests referenced in the paper. All of the analyses are annotated and appear in the notebook in the same order as they appear in the paper and online appendix.
