November 3, 2015

In addition to this document, the Dataverse study with the replication materials contains the following files:

- One `.pdf` file with Supplemental Information on the paper (this is the web-appendix)
- Four `.RData` files with the data (sources described in the Supplemental Information
  - `data_panel.RData` Country/year dataset for Table 1 in the paper
  - `data_elections.RData` Country/election dataset for Figure 4 and Table 2 in the paper (as well as tables and figures in the appendix)
  - `data_popularityBR_amelia.RData` Monthly observations of popularity and covariates, for Brazil, reported in Table 3. This is the output of `Amelia` so it contains five versions of the dataset with different imputed values for missing observations.
  - `data_popularityMX_amelia.RData` Monthly observations of popularity and covariates, for Mexico, reported in Table 3. This is the output of `Amelia` so it contains five versions of the dataset with different imputed values for missing observations.
- Three `.R` files with the replication code
  - `___analysis_panel.R` Replicates Table 1 in the paper
  - `___analysis_elections.R` Replicates Figure 4, Table 2 and results in the appendix
  - `___analysis_timeseries_dataverse.R` Replicates Table 3 and results in the appendix
