Replication Guide: Political Trust and Support for Immigration in the American Mass Public

The Stata Do File will allow for a replication of all Tables in the main paper. The ANES and GSS can each be accessed online publicly. In this paper, I downloaded several of the surveys (2012 ANES Time Series Study, the 1992-1997 Merged File, and the 2000-2004 Merged File) into R Studio, selected the variables of interested that I needed, and then exported that smaller dataset into Stata for statistical analyses. I did this because the version of Stata that I had access to at the time was too small to handle several of the ANES datasets. In general, I would recommend working with the entire dataset in Stata (using a version that can handle larger surveys) rather than using R Studio to selectively choose variables. Regardless, all datasets will, in conjunction with the Stata Do File, replicate all the statistical analyses in the main paper (Tables 1-7).

The publicly available datasets used in the main paper were:

- **American National Election Studies (ANES)**
    - 2016 Time Series Study (https://electionstudies.org/data-center/2016-time-series-study/)
        - Table 1, Table 2, Table 3, and Table 4
    - 2012 Time Series Study (https://electionstudies.org/data-center/2012-time-series-study/)
        - Column 1 in Table 5
    - Time Series Cumulative Data File (https://electionstudies.org/data-center/anes-time-series-cumulative-data-file/)
        - Column 2 in Table 5
    - 1992-1997 Merged File (https://electionstudies.org/data-center/1992-1997-merged-file/)
        - Used for the 1994-1996 Panel Analyses in Table 6
    - 2000-2004 Merged File (https://electionstudies.org/data-center/2000-2004-merged-file/)
        - Used for the 2000-2002-2004 Panel Analyses in Table 6
- **General Social Survey (GSS)**
    - GSS Panel 2010-Sample Wave 3 (http://gss.norc.org/get-the-data/stata)
        - Used for the 2012-2014 GSS Panel Analyses in Table 6
