- We used STATA15 (IC version).
- The dataset is named `data.dta`. The file `paper.do` allows to replicate Table 1 and figures 1a to 1d in the paper. The corresponding log file is named `paper.smcl`.
  - Notice that the replication requires he following packages: `coefplot , ebalance, clustse`.
- The file `supplementary.do` provides some additional codes to replicate figures and tables dealng with threats to identifications presented in the online supplementary material. The corresponding log file is named `supplementary.smcl`.
