README

This folder contains the replication material for “Crisis and the Trajectory of Science: Evidence from the 2014 Ebola Outbreak” by Caroline Fry. The folder contains the following files:

Replication dataset

- ebola.dataset.dta — panel dataset at the scientist year level

A detailed data description can be found in Supplementary Appendix A, published at the website of the Review of Economics and Statistics.

Code for replicating results in the paper (stata do-files)

- Replication_tables.do — code for replicating the tables
- Replication_figures.do — code for replicating the figures
- Replication_supplementarytables.do — code for replicating tables in supplementary materials

Replication requires Stata (version 16).

In order to replicate the results, adjust the path in each do file to the directory where you download the dataset. It may be necessary to install additional stata packages from public repositories.

In order to access the raw data that contributed to the generation of the analysis dataset, please contact Caroline Fry (cvfry@hawaii.edu).
